FRESNO, MODESTO, STANIS. LAUS AND CENTRAL CALIFORNIA.

COUNTY JAIL-2 story, base and mezzanine floor. Class A construction, \$150,000. Bakersfield, Kern Co., Cal. Architect, Orville L. Clark, Brower Bldg., Bakersheld, Owners, Kern County. The Board of Supervisors recently selected the designs of Architect Clark for the new County Jail and awarded the second prize to Thomas B. Wiseman of Bakersfield, \$250, and third prize to J. W. Dolliver of San Francisco, \$125. The building will be classic in design. of reinforced concrete construction faced with terra cotta. Floors and roof slabs will be of reinforced concrete. Interior partitions will be of hollow tile and metal lath and plaster. The structure will cover an area of 112 by 100 feet. Basement will contain mechanical room, engineer's quarters, fumigation and bath rooms, armory, storage space and garage. The sheriff's office, three deputy's offices, jailor's rooms and two tiers of steel cells will occupy the first floor. Second floor will be arranged for wash room, dining rooms and kitchen and quarters for the female prisoners. Interior finish will be largely of metal and hardwood A hospital and cells for inshripted are also provided for in the plans. There will be a steam heating system, vacuum cleaning and hot water supply Plans are complete and out for figures. Bids close March 6th.

SCHOOL—2 story and base, reinforced concrete, \$30,000. Bishop, Inyo Co., Cal. Architect, G. B. Clement. Bishop. Owners, Bishop School District. Plans for the building to be erected in the Bishop District have been completed and approved and are now out for figures. The structure will be practically freproof and will contain eight class rooms, assembly hall and principal's office. Interior finish will be of pine. Maple floors will be used in the class rooms. There will he a central system of heating. Exterior of the building will be faced with cement plaster. Bids are now being taken and will be oneed on March 10th.

RULINGS OF THE INDUSTRIAL AC-CIDENT COMMISSION INTERPRET-ING THE WORKMEN'S COMPENSA-TION, INSURANCE AND SAFETY ACT.

As a result of a widespread request from employers, attorneys and employees throughout the States, the Industrial Accident Commission has interpreted several of the more important clauses of the Workmen's Compensation, Insurance and Safety Act previous to any case having been brought before it for adjudication. The following ruilings are not to be looked upon as being the final opinions of the Commission; they have been made subject to change or modification.

CHAUFFEILIS

The Commission holds that chauffeurs, private or otherwise, come under the Compensation Provisions of the Workmen's Compensation, Insurance and Safety Act without any election on the part of the employer being necessary. They are not to be classed as household domestic servants.

AMBULANCE FEES.

It has also expressed Itself as being of the opinion that the reasonable cost of necessary transportation immediately connected with the injury is a proper charge for medical treatment under the Compensation Act.

VOLUNTARY FIRE DEPARTMENTS, AND PUBLIC OFFICERS WORK-ING WITHOUT SALARY,

It has ruled that members of voluntary fire departments, operating without remuneration, and public officers, who serve without remuneration, are entitled to medical and surgical benefits, but are not entitled to any other compensation benefits.

FARM EMPLOYEES.

In the case of farm employees, it expressed the opinion that work done on a farm by employees of the farmer for the maintenance and operation of such farm, is excluded from the compulsory provisions of the Compensation Law, but that such farm employees, however, can proceed against their employers by means of a suit for damages, said suit being filed under the first two sections of the Roseberry Act

INTERSTATE COMMERCE EM-PLOYEES.

The Commission has also stated that it will assume jurisdiction where employees residing in California make a contract of hire in California, without reference where any accidental injury or death may take place.

EARNINGS OF SEASONAL EM-PLOYEES,

In each case where subdivisions 1 and 2 of subsection (a) of section 17, of the Compensation Act cannot reasonably and fairly be applied, the Industrial Accident Commission holds that it will seek to ascertain the average annual earnings by testimony showing the earnings throughout the year of the individual concerned.

PROCESSES FOR FIREPROOFING WOOD.

[Consul General John L. Griffiths. London, England 1

Considerable attention has been given in the United Kingdom to the hest method for firepreating wood especially in connection with railroad construction. The following is scription of a process which, The following is a de claimed, hus received the favorable consideration of the British Admiralty.

The wood is placed in large iron cylinders, the doors of which are hermetically sealed. The wood is then subjected to a course of steaming, and under vacuum the air and moisture in the pores of the wood are removed and the sap vaporized. The fireproofing solution is thereafter run' into the cylinders, and under pressure forced throughout the pores and fibres. Subsequently the water in the solution is evaporated in drying kilns, and the chemicals, in minute crystal form, are left embedded in the wood. When heat is applied, these crystals expand to many times their original size, forming a glassy coating to the fibres of the wood which excludes the oxygen in the air. In time the leat causes the crystals to collapse, but further crystals in the wood immediately expand, and the same process of resistance against fire continues. The chemicals used are antiseptic and preservative. consisting chiefly of phosphate of ammonia. As a result of the treatment. the life of the wood is also lengthened, for the cause of decay (sap water) is eliminated. This process is claimed to be especially satisfactory, inasmuch as the material treated is not saturated with a solution of salt, nor are such chemicals used as tungstate of sodn sulphate of ammonia, sulphate alumnia alum, etc., which invariably cause discoloration of the wood, corrosion of metals, destruction of fibers. and prevent satisfactory painting or polishing. After this treatment the wood can be worked, nailed, glved, painted, polished, etc., as though it had not been subjected to any special process. All kinds of tupher can be treated, including oak, toak, deal, pine, mahogany, walnut, beech, birch, ash, maple, whitewood, pitch pine, larch, etc.

Adopted by Haderground Railways and Brltish Navy.

The first railway company to take advantage of this process was the Underground Electric Railways of Lon-

don, and at the present time it is Stated that the woodwork of all the alls of the company has been subjected to the treatment. It is also stated that after exhaustive tests the British Admirally has adopted the process. that the company is engaged in liveproofing large quantities of wood for 70 motor hoats for the British warships Indomitable and Monarch, and that the two new superdreadnoughts now building, the Queen Elizabeth and Warspite, are to have their woodwork in-proofed by this process

The company using the process states that as a result of the recent disaster at Aisgil, the Midland Railway ton whose system the accident occurred has requested the fireproofing company to submit a tender for erecting a firepronting plant at the company's works in Derby, and that, pending the erection of such a plant, the company has sent 144,000 feet of timber to be treated by the fireproofing company.

The cost of rendering wood fireproof by this process is a uniform one of 73 cents per cubic foot for all woods excepting oak and teak, for which the charge is 85 cents per cubic foot

Inother Process.

There is another firepronfing process known as the "Snowdon process." the chief feature of which is a chemical muxture, but the formula is not disclosed. By the use of this mixture it is claimed that woodwork and all manner of fabrics may be lendered noninflammable and insect proof. In the case of wood already in position, it may be painted or washed with three or more coats according to density. when the solution penetrates to a depth of about one-eighth of an inch. When treated prior to construction, the wood is usually soaked in the solution in tanks, but if it is desired to render the wood fireproof throughout. pressure cylinders are used to force the liquid into every fibre,

(The consul general sent numerous samples of the fireproofed wood of the first process, and a circular of the Snowdon system, which will be loaned on application to the Burcau of Foreign and Domestic Commerce.

VEHY ANNOYING.

It was deucedly thoughtless Congressman Lewis, of Maryland, to gather all those revealing statistics about telephones and telegraphs. Where ignorance is bliss, 'tis folly to find out that our telegraphic rates are the highest among twenty countries and that, as one consequence thereof. we rank but ninth as telegraph users. And of course it is no less disturbing to discover that in the matter of local telephone charges, we rank but fourteenth among sixteen countries.

But it is done now and the only thing left is to think about it as little as possible. To brood over the matter would simply end in our having to do something and that in turn might disarrange some of our most cherished dividend-paying traditions. Everybody knows that the proper way to have telephones and telegraphs is to make dividends the chief desideratum. Now, then, let everybody close his or her mind and let there be an end on't .--E O, J, in Life.

BOTH THE OWNER and the Architect are particularly interested in all kinds of building materials, power and heating systems, building specialties, every accessory that goes into their project. Every issue of the Building and Industrial News contains hundreds of new building and construction reports giving the names and addresses of both the owner and the architects. Both the owner and architect receives a copy of the Building and Industrial News containing mention of their individual job conspicuously marked. Thus the builder and the architect have in their hands not only the news items of their particular project, but also the announcements and the advertisements of energetic business men who have goods to sell that are necessary to construct and equip the undertaking. IS YOUR ADVERTISEMENT AMONG THESE?

Catarrh Can Be Relieved

THERE IS NO NEED for you to continually suffer from Catarh and Cold in the Head. If makesyou miterable, doesn't it? You really don't care whether things go right or not and you wonder when you'll ever get over it. And you will not get over it until you get the Clover Leaf Catarh Remedy, and use it. It will relieve you, and you'll wonder why you had not used it sooner. We are so positive that this will relieve you of your Catarh or Cold in the Head, that we guarantee you satisfaction or we will refund your money.

Editorial Comment.

Building operations for San Francise for the month of January, 1914, amounted to \$1,928,563. This includes all construction within the city limits. This, however, does not include permits for 16 new Exposition buildings, which totaled some 6 million dollars.

Compared to last year the construction work for the city is somewhat less for the same month, the total for January, 1913, being \$2.655.990.

Generally speaking the total for the month throughout the country is somewhat less than last year. Official reports from about 65 different cities representing building centers throughout the country printed in the American Contractor, Chicago, show a loss of about 8 per cent for the month.

The following is a comparative tabulation:

	January	Januar
	1914.	1913.
Akron	\$ 138,150	\$ 208,22

The building permits from the Board of Public Works, as previously printed in the "Builder," show that more than 6 million is to be spent for Exposition buildings. As this is not yet started nor contracts filed it is not included in this month's estimate. Taking these figures into consideration the total given out to the Bastern papers amount to 47,319,816. This amount is sure to be expended in the near future. So that while January may not have equaled last year's totals the coming year looks auspicious in its prospects.

From time immemorial the laws delays have been a theme for criticism of all people. To remedy this existing evil legislation has been invoked and laws innumerable have been passed, But little has been effected to expedite justice and hasten the process of its administration. These long delays and uncertainties have resulted in the people asking to have some say in the matter, and the passage of amendments to our fundamental laws has placed in their hands a means of preventing unfit judges from continuing in office after they have proved themselves to be unfit and virtually negativing all the good results of worthy legislation,

To reform the practice and interpretation of the law in the Superior Courts of the City and County of San Francisco, Presiding Judge Grorge A. Stortevant has instituted a plan to expedite the affairs of the court that bids fair o do more in the way of reform than all the legislation of recent years. The plan is to assign to particular departments the different classes of cases. This will enable the trial judges to become specialists along these particular branches of the law and they will thus be oble to receive decision with greater prompt-

It also enables afterneys to know just what department their cases will he assigned to in advance. So too it provides for the setting of a definite number of cases for trial each week in each department and assigns a judge to the hearing of insunity cases, incompetency and guardianship and removes the hearing of naturalization cases from the interference of actual trials. It further provides that cases must be decided by the judges within the statutory time when they are taken under submission and in cases where they can not so be decided that the index may have assistance.

In presenting this plan to the judges the Presiding Judge stated:

"There is much talk about the reform of the law. A great American
one said, We have never taken refuge
behind criticism and complaint instead of action." Let us all follow that
statement. The law is all right if it is
correctly laterpreted and practiced,
Let us try to act together and make
one mighty effort to show that our
work can be conducted with the same
dispatch and accuracy as other large
business interests are conducted."

The presiding judge should be most highly commended for taking this important step in the matter of expediting the administration of justice. It will save endless time and expense. It will lessen the expense of litigation many times and materially shorten the endless and vexatious delays incident to trails. It is a good thing for the people that they have a presiding judge that has the initiative and backbone to formulate such a plan and put it into active operation.

A letter from ex-Boss Croker to his former political associates in New York concludes: 'I hope some good men will get in and drive them grafter-contractors out.' Which shows that since his retirement Mr. Croker's political views have improved, even if his grammar hasn't.—Konsas City Star.

As the Exposition buildings develop and near completion and idea of their beauty begins to be suggested. And not the least element of the scheme in the coloring. The Machinery Hall, for instance, is beginning to take on the bues of the orient. As the staff is placed and the structures assume their complete form the artistic side becomes more and more apparent.

As is necessary in a world's fair the architecture is something of a medley of all nations And often all one is constrained to the limitations which even in this age of steel is prescribed by the profession. No new or dominant note is struck. But is a sort of medley of all nations with its personifications, its types and differentiations. It will be something to look upon mainly because of demonstrations by present day methods of the possibilities of structural beaut embodying the forms and types worked out by the ancestors of the present day peoples of the world.

It is reported that the electric Iron Smelter at Heroult in Shasta County has closed down, not from any fault of the work but to install an even cheaper method of reducing the iron ore. This calls attention to a notable fact. That it is possible to smelt iron ore by the electric process at a small cost. And that means a great deal to California. For it has wast ore deposits and untidd water power. The great difficulty has been the cost of smelling and reducting the one. With the electric proceeding the one reduced to a commercial basis a great infinistry will be opened up which with bring great wealth to the people generally.

Lord Decies and wife (who was Vivien Gould) are still on the coast, and certain journals furnish lengthy accounts of their daily doings.

One newspaper in particular went so far as to give a detailed description of the mislaying by Lord Decies of his toilet set, explaining how he was forced to use his wife's brush and comb!

And this was considered important enough to be put on the wires and sent to various publications in various cities!

Consider how much space would have been devoted to the thrilling incident if Lord Deces had lost his But why continue the terrible breeches, and had been forced to—thought?

Men and teams have been engaged and actual construction work has been begun on the Hetch-Hetchy project. It is probable that the amount of work done at present will simply comply with the law, which provides that actual work must be commenced within sixty days after granting of the permit. At any event it is a report of progress. And any action after twelve years of waiting and marking time is certainly welcome news.

Christofferson has succeeded in flying from San Francisco to San Diego and has conquered the wind currents of the mountain passes. These are like rapids in a stream and the aviator who passes over high mountain barriers is forced to go high into the air and force this way against strong and uncertain wind.

The proposal of the Panama Exposition to hold an aviation meet wherein a large prize will be offered for a race around the world seems to be of doubtful value and very difficult of execution. It would require the expenditure of a great deal of money, and entail an almost certain loss of life. And the result would probably not be of very great value. It would demonstrate that such a feat is possible, but it would not add anything to the safety of aerial navigation. As a theatric stunt if would be of doubtful value for the people would only see the start and the finish. And the aviator, if he possibly escaped being dashed to death or shot by ignorant people in some part of the world or drowned in the ocean. would be a battered wreck at the end of the journey.

There seems to be a way out of the Panama tolls controversy by not exempting coast wise shipping and thus giving all nations an equal chance. At the same time a subsidy could be given American shipping so that it would in effect amount to the same thing. It may be unjust in theory to build up one industry at the expense of another. This is the theory of the protective teriff and in many cases it has developed monopolies. But nearly all the nations of the world have sub-

sidized their shipping interests and as a result American ships can not compete with them in carrying rates. The only reason subsidies have not been granted the same as other interests have been protected is that such an action would militate against the freight rates charged by the railroads. Certainly it would seem that the United States would have the right to exempt its coastwise shipping if it su desired. But if it violates treaty rights the same result can be obtained by granting a subsidy to our own ships. This would tend to lower freight rates and benefit everybody generally and not a few people of a favored industry as the protective tariff has often done.

The banquet held at Richmond last week to commemorate the establishment of the linner harbor of that growing city marks a distinct improvement for San Francisco Bay. The United States Government has apreved the plan by the Rivers and Harbors Committee of the House and has recommended an initial appropriation of \$125,000.

All these things tend to build up a greater San Francisco. As Richmond is the terminal of the oil pipe line and the terminal of a transcontinental railroad it is a place for factory sites and a shipping point of first value. Whatever helps the Bay cities helps San Francisco. So that the growth of these Bay cities demand a water supply and a general welfare for the whole community.

A plan has been formed by a Mr. Pitkin to provide for transportation to the Fair site from the ferry building on a gravity railway on the same principle that beer cases are sent down the incline in a brewery. It seems feasible and no doubt would be a most interesting trip to take. There is no question but that the project would pay for itself in a short while and as the problem of transportation is a serious one it looks like a practical solution of the matter.

Architect G. Alexander Wright in the last edition of the Quantity Surveyor makes a plea for more complete plans and specifications. As this lack of completness is the cause of as much difficulty and differences as any thing cles in the building business, his words on this subject are worthy of universal notice. His argument is herewith quoted in full:

CANAL EXCAVATION IN DECEMBER,

The grand total of canal excavation to January 1st, 1914, was 215,458,272 cubic yards, leaving to be excavated 16,894,728 cubic yards. The total excavation for the month of December was 1,581,726 cubic yards. In the central division, including Culebra the total was \$60,429 cubic vards, of which 161,000 cubic yards was removed by steam shovels from the top of the lanks of Culebra cut in the zone of the slides, in order to relieve pressure, 417.807 cubic yards were taken out of the slides, and 141,000 cubic yards removed by the Culebra sluiding plant .-Sacramento Bee.

Scientifically Designed Kitchens.

Hy George E. Walsh, In The House Beautiful.

Until quite recently the kitchen received less attention from architects than almost any other part of the house, and their designs followed conventional lines of the past, or no lines at all, but were built in a haphazard way without much thought of convenience or suitableness. We have erred in the past in both ways by building too small or too large kitch-A revolt from the pantry-like kitchens so common in apartments led to the other extreme-large airy, oversized kitchens. A little calculation of the number of steps a housewife must take to prepare meals and serve them will show the chief objection to large kitchens. If the bousewife prepares three meals a day, or 1,100 meals a year, she will walk about 20 miles in doing this work if the distance from the range to the dining room table is 25 feet. The size of the kitchen must he considered, and also the location of the range in its relationship to the position of the dining room table, the sink, pantry and other important parts of the workshop of the house.

First, consider the location of the kitchen. It should have a northern exposure as a rule, with only castern or western windows besides those on the north. This keeps the kitchen cool in summer, while one with a southerly exposure is almost unendurably hot. The living rooms should have the southerly exposure with its flood of sunlight, but the kitchen does not need it. Proper ventilation, with windows or doors on opposite sides to give a cross draft, will keep the kitchen cool, airy and sanitary winter and summer.

The kitchen should be made as nearly square as possible, and not oblong as so muny have been planned in the past. A square room saves many steps in the course of a day or week. In an oblong kitchen the range, sink or closet must be set at an unnecessary distance from the dining room, and a few steps extra to cover this space means in the course of a year a good many miles. In the modern scientifically planned kitchen the first consideration is to save steps. The kitchen should consequently he of medium size so that all parts of it can be reached with a few steps. The size must of course depend largely on the size of the house and the family. An architect who has tried to reduce the kitchen to a scientific hasis, so that every unnecessary sten is eliminated, estimates that for a family of five or under a kitchen ten by ten feet is of the proper size, and for larger families a kitchen twelve hy twelve feet should answer all purposes, and a fourteen by fourteen size should seldom be built except for unusually large houses and families.

The arrangement of the various conveniences and useful equipments should follow some particular plan. The range should be placed in the middle of the wall next the dining room, with the door opening into the lateer

or a butler's pantry near to it. The sink should be placed in the middle of the wall at right angles to the range. and not opposite. The reason for this is that the housewife must pass constantly from sink to range in cooking, and the distance between the should be cut down to the smallest space. If possible there should be placed in the wall between the sink and range the kitchen closet or pantry. By grouping these three important parts of the house laboratory close together one can cook often for hours without moving more than a step or two. If there is a gas range in the kitchen in addition to the coal stove it should have a position next to the latter, and provision must be made for this in designing the room at the heginning.

The pantry, closet or shelves adopted for a kitchen should never run down lower than within 30 inches of the The upper tier should not exfloor. ceed five feet. One of the hardest constant stooping to get things out of the closet or hauling up a chair to reach some article above the head. By bringing everything within reaching distance much of the hard, back-breaklabor is eliminated. Likewise there should be some reform attempted in the kitchen range. The stove should be high enough so that the oven can be opened and closed without stooping to an unusual degree. The top of the stove should be on a level with the waist, and the oven as high un as possible. A low stove should be placed on a concrete base raised to a sufficient height to overcome its defect in this respect.

The kitchen sink should have woodwork about it to harbor grease, dirt and germs, but should enameled ware or some sanitary stone or slate material. The spigots should be equipped with threads so that a short hose length can be attached for drawing water to any part of the kitchen. This will save carrying many pails of water for washing or scrub-Briss spigots are not as dehing sirable as nickeled, for they are not as sanitary and they take more labor to keep clean. A combination spigot of hot and cold water is better than two separate ones, for then the temperature of the water can be regulated at any time to sult the needs.

The cost of equipping a kitchen properly must often be regulated by one's nocket book, and consequently one may not have all the modern improvements and sanitary arrangements. Where expense does not interfere, the kitchen should have tile floor, which can be easily cleaned and is non-absorbent and perfectly sanitary. The glazed tiles are better for this purpose than the unglazed. and the prettiest shades for a kitchen are huff, browns and terra cotta Glazed tiles, marble musaic, terrazzo and granolithic floors are all sanitary and suitable for the kitchen, but they

all have the disadvantage of being cold to stand on. To overcome this kitchen floors made with these matereals may have strips of carpet spread over them in cold weather. In recent years a good deal of effort has been expended in trying to find the ideal sanitary floor covering for model kitchens. Several of the compositions known as lignolith, monolith and asbestolith are made of wood fibre and plaster put in when in a plastic condition. They are troweled down to a smooth finish, polished and colored to suit. They are fireproof, and leave no joints or cracks where dust can collect, but the top surface in time wears off and they require revarnishing and repolishing the same as hardwood floors. They are not quite so cold to stand on as tile or cement composi-

Tile and Cement Floors,

not desired a well-laid rift-sawed hard pine wood floor can be made to do good service. The chief thing is to see that it is laid on a solid foundation which will not vibrate with each tread of the foot. Then crack and joint fillers will not work loose so readily. Cracks should be filled up with some kind of good filler, and then oiled, varnished and rubbed down. A shellac tinish is good, or even an oil finish The corners of the rooms should be rounded out with a curved piece of moulding and the cracks filled, The worst places for collecting dust are in the corners and this can be avoided.

Wall papers should be rigidly banished from the kitchen walls. If tiles cannot be afforded use paint. If hard cement plaster composes the walls several coats of white lead and oils should be applied. The wall may be grooved in lines to resemble tiles. and when a final coat of some shade of enumel paint is applied the effect is all that one can desire. Oil mixed with varnish can be rubbed into the ordinary wall until a soft yellow tint is applied, and each successive application will darken the surface a little. When the varnish is added to the oil the surface can be washed, and even steam will not discolor or affect it.

A generous hood should be placed over the kitchen range and connected with the ventilating flue, or if there is a register in the chimney connect it with that. This will carry the smoke and odors of cooking out of the room, that stoves have been improved in recent years, so that the odor no longer fills the kitchen as formerly, but such a range should be placed so that all possible odors can be carried up under the range hood.

Locating the Refrigerator,

in the modern sanitary and scientificially designed kitchen, the refrigerator is never placed directly into the kirchen, but is built into the wall, with inside and outside entrance. The outside entrance is for cleaning and resulting purposes and for putting in ice. The inside entrance is for reaching the articles stored there. On the

outside a door is made to open in two sections The upper section is for filling with ice, and admits to no other part of the refrigerator, and the lower half is for cleaning and ventilating if possible, the inside of the built-in refrigerator should come flush with the wall, but if this is not feasible the wall can be built out. The advantages of such an ice box are many. It is more sanitary than one in the kitchen, for the drainage is all through a pipe which drips outdoor and can be easily reached, the ice-box is always cooler, and the saving in ice is not inconsiderable, and the dirt is kept from the kitchen every time the iceman calls Improved built-in ice boxes have thin copper wire meshes on the outside so that the outside air can be admitted in winter, and for months at a time perfect refrigeration is obtained without the use of any ice. Even in summer the ice bill is considerably reduced by such an ice-box when located on the north side away from the sun.

Many conveniences can be arranged in a kitchen other than the above which will save time and footsteps One in particular, suitable for summer houses, and used in some town homes, is to construct a china closet within the partition separating the kitchen from the dining room. This closet, with its series of shelves, has glass door opening on either side, one in the kitchen and one in the dining room The china dishes most used are kept in this closet, and they can be reached equally well from either room. In addition to this, one of the shelves can be used for changing the dirty dishes or for putting food from the stove to the table. Before leaving either room the shelf can be filled with dishes and then taken off in the other room without additional steps. This double wall closet does not detract from the appearance of the dining room if finished off properly, and its double usefulness is exposed only when the door in the kitchen is opened.

A model kitchen designed by an architect in Paris has the novelty of an endless or moving platform which carries dishes and articles from the stove to the dining room and back again to the sink. It facilitates work and lessens the labor of the housewife. The hot dishes are placed on the moving shelf direct from the stove or oven. A slight push or pull of the hand carries the steaming viands through a narrow unerture in the wall to a place placet in the dining room. By opening the door of this closet the dishes can be reached and placed on the table. Then dirty dishes are put back in the closet on the movable shelf, and another push sends them to the sink, where they are removed and washed. When cleaned the dishes are once more put on the endless platform and they are carried to the china closet to be put away for another meal. In working out this idea the French architect estimates that the movable shelf saves on an average one step in four in the preparation and serving of every meal. If this is true it should mean a saving of a walk of something like fifty miles each vear

All sorts of furniture have been invented, discarded or adopted for kitchens. Collapsible and convertible tibles, and chairs which can be turned into step ladders and clothes horses,

are features of this sort of furniture. But after all planness and simplicity are desirable. When articles become complicated one loses more time in operating them than they save through novel devices. An eluborate kitchen table with drawers, shelves books and sundry other devices, may look well and seem theoretically very helpful, but a plain, simple table with a few drawers will prove the most advantageous one table so designed had to be opened in the center to reach certain articles, the inventor never realizing that it might be a little inconvenient to divide the table and open it for some article when the top was with numerous articles of

Local Company Secures Export Agents.

W. R. Grace & Co. Will Handle the Paint Products Sales in South America and Australia,

The Paint Products Corporation, Sharon Bidg., 55 New Montgomery St., San Francisco, has completed arrangements with W. R. Grace & Company for the marketing of their L & S Cement Paint in Central and South America and Australia.

This firm is represented, or has connections in most of the cities of Central and South America, also Australia and New Zealand, and in many European countries. The fact that Grace & Company has taken up the sale of L & 8 Cement paint is good evidence that the Paint Products Corporation will do a large export business.

The following letter has been issued by W. R. Grace & Company to its various agents:

L & S Cement Print.

We are sole export agents for Cential and South America, and Australia. This paint is different from all others It is the control of the requirements of a first class oil and lead point, is better than the most expensive kinds, and if offers numerous advantages to which no other paint can lay claim. It costs less, goes further, and lasts longer.

L & S Cement Paint is not a cold water paint, but is compounded from the best obtainable linseed oil, Prench zinc, non-foding colors, and Portland Cement. It does not settle and is not inflammable in the containers. It is fireproof, acid proof, vetnin proof, and weather proof to the fullest extent. It will not crack, blister or peel from any heat or flame. The roin cannot wash it off, the sun cannot crack or discolor

It adheres to any surface—wood, brick, concrete, steel, black or galvanized iron, and ready made roofing. It clings to all kinds of material as though it were a part of the material itself, giving somewhat the appearance of a cement finish. Colors of every hue can be supplied. It is guaranteed to adhere to galvanized from better than the galvanizing coat. It is thus of inestimable value for all localities where galvanized iron, either smooth or corrugated, is used in roofing and building.

L & S Cement Paint thoroughly fills a long felt need in tropical countries,

where galvanized from rapidly deteriorates in the moist atmosphere, and no lasting protection has ever been found in ordinary paints. Upon request we will furnish interested parties samples of galvanized from coated with L & S Cement Paint.

L. & S. Cement Paint can be applied equally well with brush or spraying machine, and sets hard within 50 or 69 hours, producing a flat finish. As it does not set too quickly it covers and spreads better, and goes one-third forther, than the best lead and oil.

L & S Cement Paint is made in any color, from pure white to the most brilliant shades, and we can match all standard colors to a nicety.

Packing.

Cases—2 5 gallon cans; gross 1421/2 lbs.; net 127 lbs.

Case-1 5 gallon can; gross 72 lbs. net 63 ½ lbs.

Cases—6 1 gallon tins; gross about 91 lbs.; net 76 lbs.

Burnels of 58 gallone—glout 788 lbs.;

Barrels of 50 gallons—about 700 lbs.; net 635 lbs.

EXPOSITION NOTES.

The gigantic Palace of Machinery is completed, the Palace of Education is 25 per cent finished, and all of the eight exhibit palaces in the main group have passed the 50 per cent mark in point of completion, according to the latest report of building progress issued by Harris D. H. Connick, Director of Works of the Pañama-Pacific International Exposition

Besides the Palace of Machinery, four of the matin exhibit palaces are 55 per cent or more completed and four others have passed the 50 per cent mark. It is estimated that the Palace of Education will be finished during February and that the Palaces of Mines and Metallurgy, Varied Industries and Agriculture will be completed during March

Construction of the Idaha Building at the exposition, begun early in February, is progressing rapidly and withe completed early in March, according to present estimates. The New York Pavilion and the Canadian building also are under way.

The list of conventions to meet in San Francisco during the progress of the Panama-Pacific International Exposition now totals 212, the last convention formally booked being the National Optical Association. One convention aday for the past week is the rate at which fraternal bodies, commercial and industrial organizations, and learned societies, have signified their intentions of meeting in San Francisco during the exposition.

Annoucement was made on Monday, February 2, of the Punama-Pacific International Aviation race around the world to take place in May, 1975, starting and ending on the exposition arounds. The exposition has offered a prize of \$150,000 which will be increased to \$400,000 or more by contribution from private individuals and cities along the route to be chosen.

In point of prize value, this becomes the greatest single sporting event in the history of the world. The course around the world will be patroled by the various nations through whose domain the route runs and across the Atlantic and Pacific by France, England and American, and by Japan respectively.

President Charles C. Moore of the exposition has been advised that both houses of the Chilean Congress passed the appropriation birl of \$180,-000 gold for the exhibit of Chile at the 1915 universal celebration. This appropriation completes the chain of principal South American Republics which have appropriated funds to participate in the exposition.

Laying of the foundation for the New York Pavillon at the Panama-Pacific International Exposition was begun February 13th. Neil A. McLean, the contractor, expects to complete the building in 200 days.

Edmund Clifton, New Zealand's commissioner to the exposition, is in San Francisco and announces that will be rushed for the New Zealand huilding

A Stirling Calder, acting chief of the sculpture of the exposition, announces that one-third of the enlargements in heroic size of the statuary that is to adorn the Panama-Pacific International Exposition, have been completed or now are under way.

FOREST NOTES.

Receipts from the use of national forest resources were greatest in Arizona last year.

Dr. C. D. Marsh of the federal bureau of plant industry is delivering a series of illustrated lectures to stockmen in the west on the subject of plants poisenous to stock.

The Biltmore forest school, established in 1893 and therefore the oldest forest school in America, has been discontinued. Dr. C. A. Schenck, its director, has returned to his home in Germany.

The forest service is compiling a new volume table for calculating the board contents of standing western yellow nine trees in the southwest hased on actual measurements of 6,000

In trying to find uses for blight-killed chestnut it has been found that it can not be utilized for crating stone; quarry owners say that chestnut wood leaves an indelible stain on the marble or granite.

JAMES A. WILSON, PRESIDENT OF BUILDERS' EXCHANGE, PASSED AWAY.

James A. Wilson, one of the founders of the Builders' Exchange, died last Saturday after a very brief illness. He was buried yesterday under auspices of Mission Lodge of Masons, of which he was a Past Master.

Mr. Wilson was horn 55 years ago, coming to San Francisco at an early age and identifying himself with the bullding industry, first as a journeyman and later as a General Contractor.

Mr. Wilson was recognized as the

guiding genius of the Builders' Ex-change, serving that body as Secretary for fifteen years and as President for the past two years, which position be

filled at the time of his death. No important gathering of the Con- most valued members,

tractors was ever complete without the attendance of Mr. Wilson, whose missays in demand.

The Exchange has lost one of its

ANNUAL BANQUET SHEET METAL CON-TRACTORS ASSOCIATION OF S. F.

The recent banquet held by the Sheet Metal Contractors Association of San Francisco was attended by almost the entire membership. Those who did not attend are out and injured, because the affair was was a glorious success from the opening cock tail to the closing black coffee and cigars.

The affair was held in the beefsteak room of the Hof Brau Cafe. When once in the room you feel that you are in the country, because the room is a typical reproduction of a country harn. It must be seen to be appreciated. And the banquet too was unique because it was simple and solid. Just the kind of a dinner a healthy, vigorous sheet metal worker likes to put under his helt. Here is what the boys got for their money:

MEND. Martini Cocktail

Combination Solad Consomme with Rice Radishes Olives Filet of Sole, Tartar Sauce

Julienne Potatoes Pounded Rump Steak a la Hof-Brau Ice Cream Assorted Cakes

Cheese Coffee Red and White Wine Good fellowship reigned supreme

under the guidance of Toastmaster H. J. Hughes, who kept the revelers entertained with speeches and songs. One of the happy surprises of the

evening was the presentation to Past President, H. J. Hughes, of a beautiful clock in recognition of his valuable services as President.

Addresses were made by President Geo. Forderer. Vice President, Chas. J. McDonnell, R. B. Moore, President of the Building Trades Employers Association; Wm. E. Hague, Secretary of the General Contractors' Association; Mr. Meyers of Berger Carter Co.; M. C. Kidder of the Accident and Insurance Board, etc.

Songs were sung by Miss Jessie Dale. Messrs Wm. E. Hague, Otis Johnson, L. A. Larsen, etc. Everybody expected Thos. Guilfoy to sing "Red Wing," but he disappointed everybody- said he forgot his music

In addition to the above members the following were also present, viz.:

Chas. Amsler, Chas. F. McDonnell, T. J. Topper, Thos. Guilfoy, Thos. Comyns, Wesley Heidt, Chas. Conlin, Chas. Morrison, T. Lahaye, Jos. Schwartz, J. A. Korell, Wm. H. Yates, A. G. Overpack, W. A. Clauser, Ideal Cornice Co., R. W. Glenn, Mr. Meyer of Berger Mfg. Co., Mr. Emanuel and Ray Nolan of Pacific Hardware & Steel Co., a representative from Holbrook, Merrill &

The annual report read by Secretary Geo. S. McCallum showed the association had done fine work for the memhers, both in State and Civic Legislation, and the association was in a very healthy financial condition.

The following are the officers of the Association:

Officers

Geroge Forderer, President; Chas. Mc-Donnell, Vice-President; Geo. S. Mc-Callum, Secretary.

APARTMENT HOUSES.

SAN FRANCISCO-Apartment house, 4 story and base, brick. Cost not stated, Architects, O'Brien Bros., Clunie Bldg., S. F. Owner, A. H. Herbert, The building will be erected at the corner of Clay and Jones streets, and will contain a number of three and four room suites with baths and wall beds. Interiors will be finished in pine and redwood with some elm panels. There will be steam heat and a hot water system. The owner has not fully decided on whether to make the structure a three-story frame or add one more story and make it a brick building. Bath rooms will be finished in tile and will have composition floors. Exterior of the building will be faced with either pressed brick or cement plaster on metal lath. Figures are being taken on the foundation work.

SAN FRANCISCO-Apartment house, 4 story and base, brick, \$20,000. Architect, Edward E. Young, 251 Kearny street, S. F. Owner Herman Hogrefe. The building will be erected on the east side of Leavenworth street south of Sutter, covering an area of 25 by 84 feet. Plans provide for eight large apartments. Interior finish will be of pine and redwood with elm panels and oak floors. There will be steam heat and a hot water system. An automatic elevator may be installed. Bath rooms will have the wainscot and composition floors. All suites will be equipped with wall heds. Exterior of the building will be faced with pressed brick. Plans are complete and the work will be done by Day Labor,

SAN FRANCISCO-Apartment house, 7 story and base, reinforced concrete, \$150,000. Architect, C. A. Meussdorffer, Humboldt Bank Bidg., S. F. Owner, A W Wilson. The building will be erected at the corner of Powell and California streets and will cover a large ground area. Construction will be of reinforced concrete type and throughout and will be practically fireproof. There will be but two suites on each floor, the apartments varying from eight to nine rooms. Interiors will be handsomely finished in pine and selected bardwoods to suite the taste of the occupant. All suites will have wall beds, private bath rooms and open fire places. Mantels will be of tile and brick. Bath rooms will have tile floors and wainscot. There will be a steam heating system, hot water supply and vacuum cleaning. Marble and tile will be used extensively. Exterior of the building will be faced with white cement plaster in imitation of cut stone. Plans are now complete and figures are being taken. All parts of the work will be segregated.

SAN FRANCISCO—Apartment house alterations, frame construction, \$3,000. Architects, O'Brien Bros., Clunie Bigs. S. F. owner's name not given. The three-story building located on Sacramento street west of Jones will undergo extensive alterations, and will be made into a first-class apartment house structure. Included in the work will be new interior partitions, piumbling,

plastering, painting, mill work and electric work. Exterior of the building will also be altered. Marble and tile will be used in the entrance. Plans are complete and hgures have been taken. A general contract will be let within a few days.

OAKLAND, CAL.-Apartment house, 3 story and base, frame, \$30,000. Ar-Joseph Cahen, 45 Kearny street, S. F. Owner's name withheld. The building will be erected on Perkins street at the corner of Grand avenue and will cover a considerable ground area. There will be a total of 66 rooms in the building, which are to be arranged in two, three and four room suites, all with private bath and Wall beds, Interior finish will be of pine and redwood with some hardwood veneer. Oak floors will be used in the living rooms. Plans provide for steam heat and a hot water system. Marble and tile will be used in the entrance. Bath rooms will have tile wainscot and composition floors, Exterior of the building will be covered with cement plaster on metal lath, rustic and shiplap. Plans are now being prepared.

STOCKTON, SAN JOAQUIN CO., CAL. Apartment house alterations, 2½ story and base, frame. Cost not stated. Architect, Ralph. P. Morrell, Odd Fellows Bidg., Stockton. Owner, A. B. Munson. The present 2½ story frame residence tocated on Pilgrim street at the corner of South will be extensively altered and arranged for two and three room apartments, which will be equipped with all modern conveniences. The work will require new interior partitions, plastering, plumbing, painting and electric work. New interior finish and considerable exterior alteration will also be made. Plans are complete and figures are now being taken.

SAN FRANCISCO-Apartment house, 3 story and base, reinforced concrete, \$25,000. Architects, Rousseau & Rousseau, Monadnock Bldg., S F. Owners, The Eisenbach Co. The building will be erected on Leavenworth street between Turk and Eddy streets. Plans are arranged for stores on the first floor and a number of two and three room suites on the two upper floors. There will be steam heat and a hot water supply. All suites will have private bath rooms and wall beds, Bath rooms will have tile wainscot and composition floors. Interior of the apartments will be finished in plne with some oak floors and elm panels. Exterior of the building will be faced with cement plaster. Plans are now nearly complete.

OAKLAND, CAL.—Apartment house, 2 story and base, frame, \$25,006. Architect, John Carson, Bacon Bldg., Oakland. Owners, Loewe and Fause. The building will be erected at the corner of 10th and Madison streets. Interior will be arranged for a number of two and three room suites with private baths and wall beds. Interior finish will be of pine and redwood with some elm panels. There will be steam heat and a hot water supply. Bath rooms will have tille walnscot was a story of the control of the contro

and composition floors. Entrance will be finished in marble and tile. Exterior of the building will be faced with cement plaster on metal lath. Plans are nearly complete and work will shortly be started by Day Labor. All materials are now being purchased.

BATH HOUSES.

Contracts Awarded.

SAN RAFAEL, MARIN CO., CAL— Bath house, 2 story and base, reinforced concrete. Cost not stated. Architect, Thomas O'Connor, San Rafael, Owners, City of San Rafael. Contract jor, J. A. Kappenmenn, Jr., San Rafael. Contract price, \$31,300.

BRIDGES AND DAMS.

SAN FRANCISCO—Creosoted pile, Cost not stated. Engineer, Assistant State Engineer Resistant State Engineer Newman, Perry Bidg., S. P. Owners, State of California. Plans are complete for furnishing a large number of fresh-cut, first-quality Douglas Fir piles which have been treated, according to specifications, with creosote. Bids for this work will be opened on March 5th. Plans and specifications and full particulars can be secured by applying to the State Board of Harbor Commisioners, Ferry Bidg. An official proposal appears in another column of this Issue.

KINGS RIVER, FRESNO CO., CAL .-Wagon bridge, pile and timber construction. Cost not stated. Engineer, County Surveyor, Fresno. Owners. Fresno County. Plans have been completed and have received the approval of the Fresno County Supervisors for the construction of a wagon bridge over the Kings River near Reedley. The bridge will replace the one recently washed out by the heavy rains. Blds have been advertised for and will be opened on March 6th. Plans and specifications can be secured from the County Clerk at Fresno.

VANCOUVER, B. C .- Viaducts, reinforced concrete and steel, \$350,000. Engineer. City Engineer. Vancouver. Engineer, City Engineer, Vanconver. Owners, City of Vancouver. Plans have been completed and are now out for figures for the construction of the four east viaducts which are to span the Great Northern tracks at Hastings, Pender, Keefer and Harris streets, Bids will be received on March 4th and may be addressed to City Clerk W. Mc-Queen. Separate hids will be received for each viaduct and also for the work as a whole. Plans and specifications can be secured from the office of the City Engineer, Vancouver,

CHURCHES.

WALLA WASH. — Mausoleum, 1 story, reinforced concrete, \$100,000. Architect, W. Marbury Somerville, White Bligs, Seattle, Ownerwille, White Bligs, Seattle, Ownerwille, White Bligs, Seattle, Ownerwille, White Bligs, Seattle, Ownerwille, Tacoma, Contract price, \$100,000. Note: Cornell Bros. Savage-Scoffeld Blight Blight Brownerwille, which was the work of the West Mausoleum Company in Washington and Oregon, The company now bas under consideration mausoleum mausoleum mausoleum mausoleum in several of the large cities and towns in the two states mentioned.

FACTORIES & WAREHOUSES.

OAKLAND, CAL -- Ice and cold storage plant, 1 and 2 story, brick. Cost stated. Engineers, Faget neering Co., 354 Pine street, S. F. Own-er's name withheld. The building will he erected in a district close to spur track facilities and adjoining the commission district. Besides the cold storage plant the buildings will house a complete ice making plant. Interior will be finished in pine. There will be cement floors and metal window sash and frames. Special cold storage machinery and ice making plant will be installed. Exterior of the building will he faced with stock brick. Further mention will be made of this work when plans are ready for figures. 1 and 2 story, brick. Cost not stated Oakland, Cal. Engineers, Faget Englneering Co., 354 Pine street, S. F. Own-er's name withheld. The building will be erected in a district close to spur track facilities and adjoining the commission district. Besides the cold storage plant the buildings will house a complete ice making plant. Interior will be finished in pine. There will be cement floors and metal window sesh and frames. Special cold storage machinery and ice making plant will be installed. Exterior of the building will be faced with stock brick. Further mention will be made of this work when plans are ready for figures.

Contracts Awarded.

PORTLAND, ORE. — Creamery, 2 story and base, reinforced concrete, \$22,000. Architects, Emil Schaucht & Son, Commonwealth Bidg., Portland, Owners, Townsend Creamery Co. Contractors, Boydolon-Arnold Co., Panal Bidg., Portland. Contract price, \$22,-400.

FLATS.

SAN FRANCISCO-Flats, 2 story and base, frame, \$3,000, Architect, none, Owner, H. R. Pickens, 1412 Guerrero street, S. F. The building will be erected on the south side of Welsh street, covering an area of 20 by 46 Interior will be arranged for feet. two modern flats of five rooms and bath. Interior finish will be of pine and redwood with oak floors in the living and dining rooms. There will he open fire places and tile mantels Tile walnscot will be used in the bath room and kitchen. Entrances will be finished in terrazzo. Exterior of the building will be covered with rustic and shiplap. Plans are in the hands of the owner and the work will be done by Day Labor. Materials are now being purchased.

SAN PRANCISCO—Plats, 3 story and base, frame, \$6,500. Architect, J. A. Porporato, 619 Washington street, S. P. Owner, M. M. Porporato. The building will be erected on the east side of Leavenworth street south of Union. The building will bave a frontage of 25 feet and a depth of 50 feet. There will be three modern four and five room flats with baths. Interior flints will be of pine and redwood. Each living room will have an open fire place with tile mantel. Bath rooms will have tile wainscot and composition floors. Thirty-gallon boilers are specified. Oak floors will be used in the living and dining rooms. Entrance

will be finished in mosaic. Exterior of the building will be covered with rustic and shiplap. A pressed brick base will be used. Plans are complete and work will be done by Day Labor.

Contracts Awarded. SAN FRANCISCO—Flats, 3 story and base, frame, \$6,000. Architect, Charles J. Rousseau, 46 Kearny street, S. F. Cowner, D. Cavallerl. Contractor, N. P. Anderson, 320 Market street, S. F. Contract price, \$6,000.

GARAGES.

Contracts Awarded.

ST. HELENS, ORE.—Gargage, 2 story and base, brick and concrete, \$2,000. Architects, Houghtaling & Dougan, Henry Bidg, Portland, Owner, Columbia Country Auto Club. Contractor, W B. Donahue, 859 East 13th street, North Portland, Contract price, \$20,000.

GOVERNMENT WORK AND SUPPLIES.

Steel for Coaling Plant.

In connection with bids to be opened March 28 at the bnreau of yards and docks for erecting structural steel work for coaling plant at Pearl Harbor the specifications state as follows: General Intention—It is the ac-

General Intention—It is the acknowledged intention and meaning to provide and secure the erection and painting of all the structural steel work shown upon the plans, ready for placing upon in the railway and coalhoisting tower tracks; two movable coal chutes are also to be installed in complete working order. The piers in the coal basin will be of concrete and will be built by the government ready to receive the trusses. The government will also build all piers for the treatle towers and will furnish and set all anchor boils and furnish and install all ties, tie fastenings, rails, splices, apiexe, frogs, switches, etc.

General Decription.—The work-compies a steel trestle on the main wharf for carry ing the rails to support coalhoisting towers of 30-foot gage, center to center of rails, and a standard gage railway track, supported by brackets extending beyond the outboard trestle columns. There are also trestles on the approach piers carrying the standard gage railway track and connecting with shore trestles, which in turn connect with six lines of single track over the coal basins. On the shore, with the exception of the trestles over the coal basins, the track girders are supported on braced steel towers.

Guder ends over the coal basins are to he carried by concrete piers to be built by the government. At the inshore thack running parallel to the southerly side of the coal basin there shall be a steel trestle ramp connecting the elevoted track with the surface track, Two large portable coal chutes hung to steel frames, supported upon wheels tunning upon a rail on the wharf floor are to be installed; the chute frames to be held near their upper end by trolleys bearing against the flanges of a horizontal longitudinal girder fastened to the outboard column brackets. The power for operating the chutes shall be manual.

General Dimensions.—The trestle on the main wharf is 460 feet long, center to center of end posts on the wharf,

The curved trestle on the south approach wharf to the main pier is about 200 feet long and 15 feet wide, center to center of columns.

The trestle on the north approach to the main pier is about 200 feet long and 15 feet wide, center to center of columns.

On shore outside of the coal basin there is about 1,000 feet of straight elevated track and about 700 feet of curved track; over the basin there is about 2,700 feet of straight elevated track and about 2,000 feet of curved track. The total amount of elevated trackage, including wharf and approaches, is about 7,860 feet.

Sno Francisco Circular No. 122,

The following proposals were received by the depot quartermaster, San Francisco, Cal., under office circular No. 122, for 65,000 shingles, cedar:

McCullough Lumber Co., Royal Insurance Building, San Francisco, Cal., \$2.25 per M; delivery immediately.

Hart-Wood Lumber Co., 304 Berry street, San Francisco, Cal., \$2.20 per M; 1 day.

The Charles Nelson Co., 16 California street, San Francisco, Cal., \$2.09 per M. 1 day; accepted.

M. 1 day; accepted.

Union Lumber Co., 1908 Crocker
Building, San Francisco, Cal. \$2.25 per

M. 5 days. Redwood Manufacturers' Co., 453 Bryant street, San Francisco, Cal., \$2.-

25 per M; 5 days.

Pope & Talbot, foot of 3rd street, San
Francisco, Cal., \$2.24 per M; 1 day.

The McClintic-Marshall Co., 1421 Chestnut street, Philadelphia, Pa, item 1, \$54,000; 2, \$53,500; 3, \$52,500.

The Belmont Iron Works, 22nd and Washington avenue, Philadelphia, Pa., item 1, \$50,645, 2, \$50,195; 3, \$49,525; 4, \$63,495.

Problem of Naval Construction,

If the Secretary of the Navy had not been so much occupied last week with daily hearings before the House Naval Committee, he would probably have been able to give further consideration to the placing of the contracts for the construction of the supply ship and the transport, bids for which were opened on December 20, on which occasion the Newport News Shiphuilding and Dry Dock Company appeared as the lowest bidder in prices ranging from \$1,315,000 to \$1,350,000 for the supply ship and from \$1,695,000 to \$1,730,000 for the transport, according to the class of bid and place of trial. expected that the contract would be awarded to the Newport News firm on the basis of these bids, in accordance with the recommendation which, it was understood, was made by the chief constructor and engineer in chief. Navy Department, however, obtained hids for the same work from various navy yards, and it now appears that Secretary Daniels is inclined to place the order for the construction of the Philadelphia navy transport at the yard in the sum of \$1,350,000, in round figures, and at the Boston navy yard for the construction of the supply ship at a cost of about \$1,047,000. The difference in amount between the navy vard estimates and the bid of the Newport News firm is such as to at once excite comment and to lead to the suggestion that the Navy Department proceed with caution in any decision which may result in building vessels at the Philadelphia and Boston navy yards, where, it is pointed out, there are at present no facilities in the way of cranes and building ways for the conduct of this work, and it is estimated that the cost of the necessary installation will be from \$50,000 to \$75,000 at each establishment. While these facilities would be permanent and should be installed with a view of extensions so as to provide for larger ships at some future time, it is realized that the cost of the equipment must be added to the navy yard estimate. Aside from that factor, some of the advisors of the Secretary of the Navy entertain considerable doubt as to the reliability of the estimates from

Philadelphia and Boston, and this has led Secretary Daniels to call for additional information which shall reveal to the Navy Department the itemized amounts which go to make up the estimate in total. It has been remarked that of all the navy yards only those at New York and Mare Island ore in a position of constructing the transport and supply ship, so far as the possession of facilities has any bearing on the projects, then, too, there is coniderable doubt as to the means existing at the other navy yards for making an estimate of cost of construction upon which the Navy Department may depend. It has been freely predicted that neither the Philadelphia nor the Boston estimate represents an amount within which it will be possible to build the new vessels at those navy yards. There is no check which the Navy Department may apply at the navy yard where the would be done so as to require that the construction shall be at a cost within the estimates given, or, for that matter, within the limit of cost imposed by Congress. Under such circumstances, in view of the unreliability of navy vard estimates and the disadvantage to which the shipbuilding firms are idaced in making bids on What is obviously an unfair system of competition it is quite evident that the shiphuilders who so to the trouble and expense of premuring hids have a right to entertain a grievance against the Navy Department It is only natural that they should feel that the political favoritism exerted in behalf of navy yards is at their expense.

Si, Mary's Canal,

The Reclamation Service is asking for proposals for construction of a portion of the St. Mary's Canal, St. Mary's storage unit, Milk River irrigation project, Mont. The work includes about 560,000 cubic yards of excavation , 7,750 cubic yards of concrete, 13,-000 square yards of paving, 700 cubic yards of riprap, and \$,500 cubic yards of puddling, the placing of about 485,-000 pounds of steel reinforcement bars and 293,000 feet, board measure, of lumber in wood structures, and erection of about 105,000 pounds of miscellaneous metal work The work is situated in the Blackfeet Indian Reservation, about 40 miles northwest of Browning, Mont. The bids will be opened at 2 o'clock p. m. April 15, 1914, at the office of the Reckmation Service, Great Falls, Mont.

San Francisca, Cal., Mint,

The bid of the Butte Engineering & Electric Co., San Francisco, Cal., \$3., 200 in amount, has been accepted for the installation of a burglar alarm system in the U. S. Mint at San Francisco, Cal.

Washington Office, Panama Canal,

On and after April 1 next the office of the Isthmian Canal Commission in this city will be practically abulished and will thereafter be known as the Washington office of the Panama Canal. Major F. C Borgs will remain in charge of the office. It is not expected that any immediate change will be made in the office force.

Walla Walla, Wash, Vault Shelving, The contract for installing metal vault shelving in the U.S. post office at Walla Walla, Wash., has been awarded to Crown Metal Construction (%), Jamestown, N. Y., at \$782.60.

Metal Flames,

The Reclamation Service is asking for proposals for furnishing and erecting metal flumes on irrigation projects in Montana, Wyoming and North Dakota. The work involves the furnishing of about 7,357 linear feet of flumes of various diameters, ranging from 2 feet 6½ inches to 14 feet, and the erection of about 2,050 linear feet of times of 8 feet 3% inches diameter. The bids will be opened at 2 o'clock on m. March 9, 1914, at the office of the Reclamation Service at Great Falfs, Mont.

Grand Junction, Colo,, Post Office.

All lids received by the supervising architect. Treasury Department, Washington, D. C., for the construction, complete, including mechanical equipment of the U. S. post office at Grand Junction, Colo., have been rejected.

Roller Dams.

Under authority of the Secretary of the Interior, contract has been awarded for furnishing roller dams to constitute a movable crest for the Grand River dam of the Grand Valley irrigation project, Colo. The apparatus includes one steel roller 60 feet in length and six rollers 70 feet in length, complete, with all operating devices, except electric motors, the total cost being \$27,846 f. o. b Antwerp. The roller dams covered by the patents under which this apparatus is to be manufactured are of the most satisfactory type available for movable crests of lengths required in this case. In 1912 a similar contract was executed for the manufacture of a roller welr for the diversion dam of the Boise project. Idaho, and the apparatus furnished has in every way met the expectations of the engineers and has given excellent work

-HALLS & SOCIETY BLDGS-

SAN FRANCISCO-City Hall work. Cost not stated. Architects, Bakewell & Brown, 251 Kearny street, S. F. Owners, City and County of San Franisco. G. H. Blowers, Reedley, Cal.; Item No. 1, \$4370; (2) \$13,780; (3) Proposition No. 1, \$7823; Prop. No. 2, \$7121; Prop. No. 3, \$7280; Prop. No. 4, \$6436.

The hid of E. W. Redman was ac-

cepted on Item No. 2.

The bld of Des Moines Co was accepted on Item No. 1.

Item No. 3 has not yet been decided. The bids accepted above were the lowest which fully complied with the specifications

This year's appropriation for the postal service carries with it 310 million dollars. Since the adoption of the parcel post and free rural delivery the Post Office Department has become quite a little institution.

Bids Opened For Berkeley Post Office.

WASHINGTON, D. C., Feb. 19 (By Special Wire)—Bids opened here yesterday for construction of the Berkeley Post (Bice, California, showed the Frank Gallagher of San Francisco was lowest on Propositions 1 and 15 at that Van Sant-Houghton, San Francisco, were lowest on Propositions 3 and

Bids were called on four propositions, as follows:

Proposition No. 1-Non-fire proof construction except 1st floor and lime stone except where granite and exterior marble are required.

Proposition No. 2—Non-fireproof except first floor using sand stone. Proposition No. 2—Fireproof except roof, which shall be semi-fireproof using line stone.

Proposition No. 4-Fireproof except roof, using sandstone.

The following is a complete list of bidders;

THE QUANTITY SURVEYOR,

The February number of The Quantity Surveyor is now being distributed and should be in the hands of every Architect, Contractor and Engineer. This movement for better estimating

and contract methods should receive the hearty support of all who are called upon to furnish estimates.

The present loose an unbusinesslike methods are relics of by-gone days that should have been remedied years ago It's up to all of us to help the movement along.

Get a copy of The Quantity Surveyor from Mr. G. Alexander Wright, 571 Culifornia street, or better still, enroll as a charter member of the organization and send a dollar for a year's subscription to their monthly magazine.

This movement is a purely voluntary movement and no one makes any money out of it except the printer and Uncle Sam.

Juuction Market, Mason and Turk Streets

BOTH THE OWNER and the Architect are particularly interested in all kinds of building materials rowage and besting materials. of building materials, power and heating systems, building specialties, every accesssory that goes into their project. Every issue of the Building and Industrial News contains hundreds of new building and construction reports giving the names and addresses of both the owner and the architects. Both the owner and architect receives a copy of the Building and Industrial News containing mention of their individual job conspicuously marked. Thus the builder and the architect have in their hands not only the news items of their particular project, but also the announcements and the advertisements of energetic business men who have goods to sell that are necessary to construct and equip the undertaking. IS YOUR ADVERTISEMENT AMONG THESE?

Catarrh Can Be Relieved

THERE IS NO NEED for you to continually suffer from Cotarrh and Cold in the Head. It makes you miserable, doesn't
it? You really don't care whether things go right or not
and you wonder when you'll ever get over it. And you will not get
over it must you get the Clover Leaf Castark Remedy, and use it.
It will relieve you, and you'll wooder why you had not used it
sooner. We are so positive that this will relieve you of your Catarrh or Cald in the Head, that we guarantee you satisfaction or we
will refund your money.

San Francisco

As a carpenter and builder, Mr. Neidick has had twenty-two years of experience, during which time he has mastered the business in all its details and has established an excellent reputation for the high character of his work. This statement is proven by the fact that he has built fifty-six flats for one man all of which were erected in the most satisfactory manner. Not only is the work of Mr. Neidick of the highest standard, but his business relations with the public are characterized by the strictest integrity. Mr. Neidick has brought to a successful issue many contracts throughout this city, which stand as a testifying demonstration tor his knowledge and ability in his line of business. He is also a prominent stockholder of the General Contractor's Association.

Fditorial Comment.

Ex-Governor Francis of Missouri is quoted as saying that the exposition is far ahead of any other up to date. This is an important thing for no matter what preparations are made for such an affair it usually happens that everything is not ready when the time comes. With a California summer to work in there can be no excuse as to weather and if financial plans do not fail the Exposition should be ready in record time

Reports state that Colonel Goethals who is now in New York, is reported as saying that the canal will be ready for the passage of merchant ships by the 1st of July next. So that if nothing unforeseen happens the canal will be opened and the Exposition will be ready in advance of the time promised.

The Insurance plan adopted by the State seems to be meeting with suc-After seven weeks of operation the department for the service report a fund of approximately \$338,000 on hand, representing funds of \$168,000 from two appropriations and \$220,000 collected from actual premiums.

It is reported that more than 2500 applications for state insurance have been granted making the state responsible for policies on pay rolls amounting to 30 million dollars in the aggregate The practical value state insurance will be demonstrated before very long. How the state will take care of those who are rendered dependent by no act of their own will be worked out on a practical basis,

Out of the mass of plays that are being presented to the American public there are a great number that have no value whatever and are patronized only from the fact that they are salacious or deal with the social evil. So great has this cattering to the morbid sense of humanity become that it has been deemed wise for intelligent people to get together and set some sort of standard that right minded parents may follow for their children Accordingly members of the Catholic Church have organized what is known as the Catholic Theatre Movement and has arranged for publishing a monthly bulletin wherein will be published approval of wholesome plays. There seems to be no attempt to set any rigid standard, only that the play be decent and have some merit to recommend it. So for the first bulletin recommended the following:
"Milestones," "Bunty P

Strings," "D'Israeli." "Liberty Hall."
"Little Women," "Officer 666," "Peg
of My Heart," "Pomander Walk," "Poor Little Rich Girl." "Rebecca of Sunnybrook Farm," "The Governor's Lady," "The Things That Count,"

These are all good plays and this is a movement in the right direction. It would do well for other societies to take up some similar movement so far at least as to give some intelligent direction to the young.

To an inquirer who wanted to know the meaning of the wireless signal, "S, O. S.," a Central Kansas editor explains that it is an abbreviation of Sinking out of Sight.

The following editorial from the Sacramento Bee compares the new Workmen's Compensation Act recently enacted in New York with that now in force in California. As they are in most ways similar it is of interest to note the differences:

"New York's Workmen's Compensation Act, which does not go into effect until next July, applies to forty-two occupations groups of classed hazardous.

In this it differs materially from the California law, which makes no such enumeration or classification but applies to all employments, Save only household domestic service those of an agricultural or rural sort.

In practice, the law of this State is likely to be found much more satisfactory in that respect. Otherwise the New York enactment is much like the California law, and is regarded as a great boon to upwards of 1,000,000 employes.

In one particular the New York law is better than that of this State: it requires employers either to insure against liability or furnish the Industrial Accident Commission satisfactory proof of ab. ity to pay.

The California law calls for no such security. It leaves employers free to insure or not, as they may see fit. Yet many employers are incurring liabilities which they might be unable to meet. Either they have neglected to insure or deliberately have decided to go without insurance and chances."

in this respect, as The Bee before has shown, our State law should be amended when the Legislature meets next Winter."

Speaking of morbid crowds that attend the white slave plays and the public trials of sensational cases the following account of a trial at Emporia, Kansas, by Will Allen White is good example:

"A big-eared mob jammed the district courtroom yesterday to listen to the details of a particularly revolting trial," reports the Emporla Gazette, "It was necessary for the attorneys to go frankly into certain delicate matters, for a crime had been done, and

the crowd showed its appreciation of the law's effort to fasten the blame by laughing and crowing over some bit of evidence Court officers could not keep the noise down altogether, though they tried steinly to control it. People jammed the doors, the windows, and ven the space reserved for witnesses and officials. Probably one-tenth of the mass were women and girls, and some of the old hens sat around with a prissy expression on their faces which showed that they were just dving to be shocked. Another tenth was colored men, and the rest were white men and boys. None of this crowd had any business at the trial-there were not more than a dozen witnesses called-and vulgar curiosity is about the only motive that can be given for their presence. All boys and girls under 16 were excluded from the room, but the other boys and girls remained in the foul, stuffy atmosphere and absorbed fouler knowledge. Some of the girls were sassy little pullets, too, whose mothers ought to bring out the old fashioned hair brush for this occasion 'Every man is entitled by the law of our land to the privilege of a public hearing. said Judge Harris: 'otherwise, 1 certainly would have this courtroom cleared. Just look at that bunch of women there."

Ex-Governor David R Francis Missouri in a speech on the Exposition stated that prosperity followed the exposition at St Louis. That is interesting to learn as the great cry by those who are inclined to be pessimistic has been that the exposition here would be followed by a depression. If prosperity followed as a result of the St. Louis Exposition there should be prosperity follow the exposition here for a hundred different reasons. St. Louis is an old city, as far as American cities go. It was founded as a trading post before the Constitution was adopted. It has been a commercial center for more than a century. Its surrounding country is well known and except in the south well developed. The exposition gave no new industry or means of access to St. Louis. Its resources were the same. Nothing was different except that a vast number of people attended St. Louis and there was an advertisement of the city, Here there will be the demonstration

Here there will be the demonstration of the fact that the world's lines of commerce have been changed. The great resources of the West will be demonstrated. San Francisco will get an advertisement such as she never has received before. And aside from the great harbor that muture has bestowed here in San Francisco bay, the varied resources of the West should lead to a development that will continue for many years to come.

Under the load of the Parcels Post the Chronicle prints an editorial which states that government competition is the meanest of all competition. But dently the express companies are giving up their slop per cent dividends with "great deal of reluctance. And as the advantages of the parcels post become more and more apparent the fat monopoly of the express companies will become more and more a thing of the past and sensible people will wonder how they were ever hoodwink-

ed into being robbed by these plunder-

The same argument that applies to the express companies could be applied to the mails. For these methods of transportation that everylondy uses indiscriminately are matters that require government control or ownership. That is the only excuse for ship subsidies. For cheaper freight benefits all ond while the people pay the subsidy they get it back again in reduced cost of living.

These facts are becoming more and more apparent. That when a public utility is used by every body and depends upon a public franchise, the proper person to control it is the public itself. Hence the post office, the telegraph, the telephone and other things of like nature are proper objects of government ownership and control. The fact of allowing private monopolies to control these institutions is an anomaly. The public has been bunkoed into believing that a few men possess all the business brains in the world when the real facts are that these same men have been those who employ sharp practice in business dealings which is neither an evidence of brains nor of moral sense.

Smoke at a missince in a city has bong been recognized not only as an inconvenience but also as a costly missince in the current number of the 8 tentific American the annual bill of Pritsburg, Pennsylvania on account of the smoke missince is presented in a tabulated form, figures of J. J. (*Connor Jr., who has investigated the subject from the standpoint of dollars and cents. The items are as follows:

Cost to the smoke maker from the imperfect combustion of fuel, \$1,520,746 Cost to the individual citizen: 1) laundry bills, \$1,500,000, (2) dry cleaning bills, \$750,000.

Cost to the househoud: (1) exterior painting, \$330,000 (2) sheet metal work, \$1,000,000, (3) cleaning and renewing will paper, \$550,000, (4) cleaning and renewing lace cuttains, \$360,000, (5) artificial lighting, \$44,000, Cost to wholesale and retail stores:

(1) merchandise, \$1,550,000; (2) extra precintions, \$450,000, (3) cleaning, \$750,000; (4) artificial lighting, \$650, 000, (5) department stores, \$175,000,

Cost to semi public buildings: (1) office buildings, \$90,000, (2) hotels, \$22,-000, (3) hospitals, \$55,000.

These items are gone into in detail showing how the amounts are arrived at and the basis of calculation. Attagether the bill foots up \$9,944,710 for the year. And no attempt has been made to include such things as depreciation of value of property, absence of various industries which are practically excluded by the smoky attamosphere and injury to human health.

It is a concrete illustration of what the smoke nuisance really is in a town like Pittsburg. The same is true in a greater or less degree of every other manufacturing city in the United States. And the smoke problem is one

A MAN WHO MADE HIMSELF FELT.

Joseph Fels had a deep conviction that the existing social scheme was wrong and that it would be made right by a general change of taxation so that land values created by the community should be taken for the community. use. This being his sincere belief he did the rational thing under the circumstances. He devoted his leisure and his surplus wealth to promoting the change he believed in.

Of course this polley made him seem a familic. But it was the way to get results. Progress comes through the tetusal of men to go along the beaten path. If every man conformed to the accepted way of thinking society would stognate, as China did.

stagnate, as China did.

Life isn't so very long, and the opportunities that come to any one person to make himself fett in the world are confined to a few years. If that person sees a real chance to help the game along and merely cherishes the idea as a Greem, doing nothing to make it come true, then he will have missed the opportunity to make himself a factor in bringing the better day.

This Philadelphia soop manufacturer, believing sincerely, fought earnestly for the reforms he had at beart, and so made himself count in his day and generation.

CHARACTER.

Someone has said: "Character is what a man is in the dark." What he is without an audience. His reputation may be grandstand play, a safe, senseless slide to second with the ball a quarter of a mile away—a cloud of dust and thunders of cheers from people who don't know the game. His character may be the sacrifice hit that brings him hisses from the same class of people—and advances the team.

What you wish you were, that's your leads. What people think you are, that's your reputation. What you know you are, that's your character. To paraprize Abraham Lincoln, you may fool some other people all of the time, but you can't fool yourself one little bit of the time.

Reputation is a variable estimate, depending not upon what people knowabout you, but upon their guesses, made from what they see of you. "We have liked together for fifty years," said the Left Hand, "and I never saw him do one charitable action," That's reputation. But all that time the generous Right Hand was the almoner of God, working in loving and secret fellowship with Illim. That's character,

You will not drink wine not even for politeness's sake, and at the table of an esteemed friend, and "our Best Society" says you are a fanatical, bigoted prohibitionist. You refuse to encourage a vile story with a smile. Some people say you are a coldblooded hypocrite. You will not permit yourself to laugh at a funny story, well told, in which all the "laugh" is in its profunity. And folk say you are self righteous. And you carry your Bible in your hand when you walk to church. And they say a "canting Pharisee." Yet all the while your character is that of a sober, pure-minded, reverent, God-fearing man-a Christian. Four reputations-all bad, and one character which outweighs and outlasts the going into eternity with you .- Robert J. Burdette, in National Magazine.

FOREST FIRES OF 1913

Many Fires in Different Districts, But Well Controlled,

(From the Forest Service, U. S. Department of Agriculture.)

During 1913 the forces on the national forests fought 4,520 fires, or nearly twice as many as started in 1912, the best year the forests have ever had.

Fire Damage Kept Down.

Notwithstanding the great increase in the number of fires, Forester Graves considers that the showing made by the forest service was quite as favorable as that in the preceding year, because the damage done and the costs of fire fighting were no greater proportionately than in 1912. In both years practically 50 per cent of all fires were detected and extinguished before they burned over a quarter of an acre, and 25 per cent of both years' fires were put out before they covered 10 acres. Of last year's fires, 3,278, or considerably more than the whole number of fires in 1912, were confined to areas of less than 10 acres, and in 1.080 additional fires less than \$100 damage was done by each. In only 25 fires did the damage amount to \$1,000.

The aggregate loss in timber is estimated at 59 million board feet, valued at about \$82,000, and the damage to young growth and forage is estimated at about \$192,000. About 18 per cent of this loss, however, was incurred on private lands within the forests where 16 per cent of the fires bad their origin.

Our e with Engines Increasing.
One encouraging feature is that the total number of fires set by reilroad comotives was scarcely more than in the preceding year and represented only 12 per cent of all fires, as against nearly 19 per cent in 1912; also the proportion set by sawmills and other engines in the woods was considerably less than in 1912. This indicates very plainly, Mr. Graves says, that the public is awakening to the need of spaths arresters and care with engines in the woods.

Causes of Increase in Fires,

Looking for the reason of the increase in number of fires, the forester finds three main causes:

First of all, the unprecedented electric storms which swept the whole state of California at the end of a long dry season and set, almost simultaneously, about 700 fires. The 804 fires set by lightning in California formed nearly 50 per cent of the 1,628 fires on the national forests of the state from all causes, and were more than half of the 1,571 lightning-set fires in all the 21 states reporting.

In the second place, there were 757 fres which started outside the forests, of which 611 were stopped by the government's fire fighters before the vernment's fire fighters before they reached the forest boundarles, as against 424 which started on outside areas in 1912. However, the proportion of such fires to all those which the service battled with was about the same for 1912 and 1913.

incendiary Fires.

The other increased cause of fires was incendiarism, but this increase was confined to three states. Arkansas California and Oregon, all others showing a marked decrease. Of the 452 incendiary tires, 128 were in Arkansas, 133 in California, and 142 in Oregon. where two brothers known to have set 72 on one forest These two and other incendiaries were, of course, severely dealt with by the kiw. On the Arkansas forest, too, it has been assumed that the 351 fires classed under the general heading of "origin unknown" were mainly incendiary. In California the incendiary fires are largely attributable to what is known as the "lightburning theory," which advances the argument that forests should he hurned over frequently to prevent the accumulation of debris. The forest service considers this a pernicious theory because it scars the standing timber and thus reduces its value; it robs the forest soil of its ability retail moisture, and effectually prevents the reproduction of the forest, since such fires destroy all tree seedlings before they have a chance to get a good start.

Lightning Caused Most Fires.

In 1912, lightning caused more fires than any other agency, followed closely by railroads, campers and incending arises, in the order given. In 1913, however, the fires caused by lightning outnumbered the next nearest caused by more than three to one, but the order railroads, campers, and incendiaries remained the same as in 1912. A considerable decrease in the proportion set by railroads and campers in dicates, according to forest officers, a growing carefulness on the part of the general public.

Last year, as in 1912, California led all others in number of fires this lead being natural because California has such a long dry season. It was followed by Arkansas, Arizona, and Orcgon, in the order named. Kansas which had only one fire in 1912 North escaped without any in 1913. Dakota repeated its record of 1912 and had no fires on its one small forest Not a single severe fire occurred during the year in District 4, which includes Utah, Nevada, and southern Idaho, and in which a large proportion of the forests reported no fires at all.

Lusses on Private Lands.

There was proportionately greater loss on Private lands within the forest boundaries than on the public lands It is pointed out by the forest officers that these lands cover approximately 11 ner cent of the total area included within the forest boundaries, yet the area burned over on these private lands was more than 25 per cent of all The forest service expended more than \$30,000 in protecting the private lands within the forests and lands adjacent to and outside of the forests. In addition to this cost, services and supplies to the value of more than \$17,000 were contributed by co-operators for fire-fighting on these areas.

Fires Came at End of Season. In the middle of the fire season, that is in July, the service had high hopes of small fire damage during 1913, and this hope kept up until the middle of September, when the fire season on the untional forests ordinarily is about at an end. At that time there was less damage than had ever been recorded, and only 2,260 fires as against 2,476 in 1912, with about 60,000 acres burned as compared with 230,000 in 1912 and 750,000 in 1911. At the end of the month, however, the electric storms in California and one or two outbreaks of incendiarism changed the whole situation.

But even in the face of these difficulties, the fire-fighting force, with its plans and experience from preceding years, was able to cope with the situation. In California, in particular, it was as if a military leader, representthe district forester at San Francisco, was holding, with a comparatively small number of men or a mere skirmish force, a line of defense extending 750 miles in a north south direction. This force received, as if from an attack by the heavy artillery of an opposing army, the electric storms, generally unaccompanied by rain, which played havoc all along the Sierras and Coast Bange. That the California force was able to cone with the situation was, according to Mr. Graves, an evidence of the efficiency of the men and the organiza-

MINE DISASTERS IN THE UNITED STATES,

The statistics of coal-mine fatalities in the United States during last August, just published by the Bureau of Mines, show 230 deaths, as compared with 211 during the same month of 1912. During the first eight months of 1913, the fatalities numbered 1,632 compared with 1,539 during the corresponding period 1912. These shocking figures emphasize the Importance of the humanitarian activities and investigations in which the Bureau of Mines has taken the lead.

CONSERVATION AND A RAILROAD.

An Alaska railroad, built by the federal government, is now assured. Only formal steps, to ratify what has been agreed to remain until the bill goes to the President. As he has pressed its pussage he will of course sign it.

The era of conservation, given its first great impetus in the Roosevelt administration, is already returning substantial results. The natural resources of the great possession in the Northwest will most surely now be developed foirly. Of even greater Importance, the Nation has definitely overcome an earlier timility regarding measures called 'paternalistic.' All questions of that character will more and more the determined, not by fetch but by facts and reason.—Kansas City Star.

Firms destring news on special classes of buildings, such as Banks, Churches, Schools, Hatels, etc., will find such items all classified und grouped under proper hendlars, commencing on this page. These same items are again repeated under "LOCALATIES" in the last part of our stwo department.

APARTMENT HOUSES

SAN FRANCISCO-Apartment house, 6 story and base, brick and steel, \$68,-000. Architect, G. Albert Lansburgh. 709 Mission street, S. F. Owners, Gaffney Estate Co. The building will be erected on a portion of the company's property at the northwest corner of Sutter and Taylor streets, covering an area of 60 by 1371/2 feet. Upper floors floors will be arranged for a number of two and three room suites with private baths. Interior finish will be of pine and hardwood veneer and oak floors in the halls and living rooms. Plans provide for steam heat, a vacnum cleaning system elevator service and a hot water supply. Bath 100ms will have tile wainscot and composition floors. Marble will be used in the entrance lobby. Exterior of the building will be faced with pressed brick and terra cotta. Plans are now being prepared

SAN FRANCISCO-Apartment house. 3 story and base, frame, \$15,000, Architect, C. O. Clausen, Phelan Bldg., S. Owner E I Keller The building will be erected on the east side of 12th avenue north of Irving street, covering an area of 75 by 33 feet. Interior has been arranged for a total of nine apartments of two and three rooms. Pine, redwood and hardwood veneer will be used in the interior finish, Some oak floors are also specified. All suites will have private bath rooms and wall heds. There will be steam heat and a hot water supply. Portable vacuum cleaners will be installed. Bath rooms will be finished in tile and composition Boors. Exterior of the house will be covered with veneer pressed brick and cement plaster on metal lath. Plans are complete and in the hands of the Work will be done by Day owner Lahor

OAKLAND, CAL,-Apartment house, 3 story and base, frame, \$10,000, Architects, Hutchinson Bros., 470 13th street, Oakland. Owner's name with-held. The building will be erected on 36th street and has been designed to contain a number of two and three room suites. All apartments will have wall beds and private bath rooms, Interiors will be finished in pine redwood. Oak floors will be used in the hallways and dining rooms. There will be steam heat and a hot water supply. Both rooms will have tile wainsest and composition floors. trance will be finished in marble and terrazzo. Exterior of the house will be covered with rustic and shiplap Plans are now being prepared

LOS ANGELES, CAL — Apartment house, 3 story and base. Class C construction, \$10,000. Architect, Leonard L. Jones, I W. Hellman Bildg, L. A. Owner, C W. Howard. The building will be creeded on South Fremont street, having a frontage of 48 feet and a depth of 125 feet. Plans provide for a total of 69 rooms, which will be arranged in two and three room suites, All apartments will have private both rooms and wall beds. Plans provide for steam heat, a bot water supply and

vacuum cleaning. Interior will be finissed in pine with some oak hoors. Bath rooms will have tile wainscot and composition floors. Metal window sash and frames are specified. Entrance will be finished in marble and tile. Exterior of the building will be faced with pressed brick. Plans are complete and figures will be called for shortly.

PORTLAND, ORE-Apartment house, 5 story and base, brick and steel, \$100,-Architect, none Owners, R. F. Wassell Co., 19th and Lovejov streets, Portland. The building will be erected at the corner of 19th and Loveing streets, covering a kirge ground area There will be a total of 57 suites arranged in two and three room apartments. All suites will have wall beds and private bath rooms. Interior finish will be of pine and hardwood. Oak floors will be used in the living and dining rooms Plans provide steam heat, elevator service, vacuum cleaning and hot water supply. Bath rooms will be finished in tile composition floors. Exterior of the building will be faced with pressed brick. Plans are complete and the owners are now taking figures on the following: Dumbwaiters, elevator, steam heating plant, cement, brick, lumber, plumbing, and bids for the balance of the work will be called for at a later date.

SAN FRANCISCO-Apartment house. 3 story and base, frame, \$16,000. Architect, Theo W. Lenzen, Humboldt Bank Bldg , S. F. Owners, Braun Realty Co. The building will be erected at the northwest corner of Cumberland and Guerrero street on property 39 by 63 feet. Plans provide for twelve suites arranged in apartments of two and three rooms. All suites will have wall beds and private bath rooms. Interiors will be finished in pine, redwood and some elm panels rooms will have tile wainscot and composition floors. There will be steam heat and a hot water system. trance will be finished in tile and mar-Exterior of the building will be faced with rustic and shiplap. Plans are complete and figures are now being

BRIDGES AND DAMS.

THALHEIM, STANISLAUS CO., CAL -Bridge, reinforced concrete. not stated Engineer, County Surveyor Modesto. Owners, Stanislaus County Plans have been completed and re ceived the approval of the Board of Supervisors. The bridge will be erected near Thalheim and has been designed for a highway bridge with road way and foot way. There will be concrete abutments and some ornamental Plans are now out for figures and hids will be opened on March 10th at 10 o'clock. A certified check of 10% of the amount of the hid is required. Plans can be secured from the County Clerk, H. Benson, at Modesto.

PORTLAND, ORE. — Bridges, reinforced concrete Cost not stated Engineer, County Engineer, Portland

Owners, Multnomah County. have been completed by the County Engineer for six bridges which are to erected in Mulinomah County. Plans and specifications can be secured from the County Commissioners, Court Honse, Portland, Following is a complete list of the work included: At Latourelle Falls, one reinforced concrete bridge, three 80-foot arches. At Youngs Creek, near Bridal Veil, 100foot, reinforced concrete arch. At Bridal Vell, one reinforced concrete girder bridge across Bridal Veil Falls. At Multnomah Falls, two reinforced concrete viaducts and one reinforced concrete bridge. At Oneonta Gorge, one reinforced concrete girder bridge. At Horse Tail Falls, one reinforced concrete girder bridge, together with reinforced concrete slabs on three openings between Mist and Multnomah Falls on the Columbia River Highway.

SOLANO-SACRAMENTO CO., CAL .--Bridge, Steel lift type. Cost not stated. Engineers, County Surveyors of Sacramento and Solano Counties, Owners. Sacramento and Solano Counties. County Surveyor F. A. Steiger of Sacramento has been in San Francisco in conference with the Federal authorities in reference to the proposed bridge over the Sacramento River between Solano and Sacramento Countles at Rio Vista. The proposed bridge is to be about 3,200 feet long, consisting of 20 150-foot stationary spans and 1 200foot lift span, under which the steamers will pass. It will leave a space of 100 feet in the clear when lifted. plans call for a modern steel structure, set on cylindrical piers driven to hedrock or into gravel. For one-half its distance the bridge will pass over the present river channel and the other half will be over what is now, except in the time of freshet, dry land. It is reported that Federal approval will be forthcoming.

TACOMA. WASH.—Municipal dock, timber and concrete construction, \$125,000. Engineer, City Engineer, Tacoma. Owners, City of Tacoma. The Commissioners of Public Works has been authorized to complete plans for a municipal dock large enough to care for ocean-going vessels and of a permanent type of construction. Money in the amount of \$125,000 is now available for construction. Further mention will be made of this work.

COURT HOUSES

ALTURAS, MODOC CO., CAL.-Court House, 2 story and base, reinforced concrete, \$90,000. Architect, F. L. De Longchamps, Reno, Nevada. Modoc County. Architect De Longchamps has completed working drawings for the new county court house and these plans have received the approval of the County Supervisors, Construction will be started as soon as bids can be secured. An official ad-March 2nd and hids will be opened on April 2nd, Plans and specifications will be available about March 5th and can be secured from the architect. The structure will be fireproof throughout. and, besides providing offices for the county officials, will contain a large meeting room for the supervinsors. indges' chambers and the county fall, Considerable marble and tile work will be used. There will be steam heat,

vacuum cleaning and fireproof vaults. Exterior will be faced with cement plaster and native stone.

FACTORIES & WAREHOUSES.

SAN FRANCISCO-Bakery, 2 story and base, brick, \$10,000. Architects Righetti & Headman, Phelan Bldg., S. F. Owner's name withheld. This building will be erected on 4th street near Stevenson, and will cover an area of 50 by 85 feet. First floor will contain the bakery proper and upper floor will be arranged for office and shipping shipping rooms. Interior will be finished in pine throughout. A cement floor will be used on the ground floor. Special machinery and equipment will be installed. Metal window sash and frames are specified. Exterior of the building will be faced with pressed brick. Plans are being prepared and figures will be called for shortly.

SAN FRANCISCO - Warehouse, 3 story and base, reinforced concrete, \$12,000. Engineer, James T. Ludlow, 604 Mission street, S. F. Owners, National Ice Cream Co. The building will be in the nature of an addition to the company's plant on Guerrero street north of 16th. Construction will be of the reinforced concrete type throughout with concrete floors and walls, interior will contain the offices, factory, cold storage rooms and packing and shipping departments. Interior will be finished in pine. Special machinery will be called for. Exterior of the building will be faced with cement plaster. Plans are complete and figures are now being taken. SAN FRANCISCO-Laundry addition.1

and 2 story and base, brick. Cost not stated, Architect, Milton Lichtenstein, 111 Ellis street, S. F. Owners, Galland Laundry Co. The building will be erected at the southeast corner of 8th and Folsom streets in the rear of the company's present building. There will be a cement first floor. Interior finish will be of pine throughout. Metal window sash and frames are specified. Exterior of the building will be covered with stock brick. Plans are complete and figures are being taken.

SEATTLE WASH — Warehouse. 4

story and base, reinforced concrete. \$500,000. Engineer, Assistant Engineer Henry Baetz, Port of Seattle Commisslon, Seattle. Owners, City of Seattle. The building is to be located at the corner of Whatcom and Spokane streets and will cover an area of 147 by 210 feet. Interior will provide 1,500,000 cubic feet of storage space. Construction will be fireproof throughout with reinforced concrete walls, floors and roof slabs. There will be hollow tile and metal lath and plaster interior partitions, metal window sash and frames and fireproof doors. Elevator service is provided. Exterior of the building will be faced with cement plaster. Plans will be complete and ready for figures early in the summer. Further information can be secured from the Port of Seattle Commission.

FLATS.

SAN FRANCISCO—Flats alterations. 3 story, frame, \$8,000. Architect, O. E. Evans, 2367 Mission street, S. F. Owner's name withheld. The present three story frame building will be altered into modern flats. This work will include modern plumbing, new interior finish, palating, plustering and carpentry work. There will be four open fire places and tile mantels. Some exterior alterations will also be made. Plans are nearly complete and figures will be called for shortly.

SAN FRANCISCO-Flats, 2 story and base, frame, \$6,000. Architect, Alvin J. Stern, 1522 Broadway, Oakland. Owner, E. J. Duffey. The building will be erected on the south side of Green street west of Jones, and has been designed to contain two modern flats with garages in the basement. flat will consist of five rooms and both, Interior will be finished in pine, redwood and hardwood panels. Oak floors will be used in the living rooms and dining rooms. There will be open fire places and tile or brick mantels. Butli rooms will have tile weinscot and composition floors. Automatic water heaters will be installed. Exterior of the building will be covered with a pressed brick veneer base and cement plaster on metal lath. Plans are complete and the owner will shortly take figures.

SAN FRANCISCO-Flats, 2 story and base, frame, \$4,000. Architect, none. Owners, C. J. and W. J. Keenan, Grove and Mosonic streets, S. F. The building, which has been designed to contain two flats of five and six rooms, will be erected on the east side of Masonic avenue north of Hayes and will cover an area of 25 by 60 feet. Interiors will be finished in pine and redwood with some oak floors. There will be an open fire place in the living room of each flat. Mantels will be of tile. Bath rooms and kitchens will have tile wainscot. Composition floors will be used in the baths. Automatic water heaters will be installed. Exterior of the building will be covered with rustic and shiplap. Plans are in the hands of the owners and the work will be done by Day Labor.

SAN FRANCISCO-Flat, 2 story and base, frame, \$3,000. Architect, none. Owner, M. Perrazzo, 284 Lee avenue, S. F. The building has been designed to contain two flats and one store, and will be erected on the south side of Ocean avenue east of Lee street. interior finish will be of pine, redwood and elm panels. Oak floors will be used in the living and dining rooms. will be open fire places and tile mantels. Bath rooms and kitchens have tile wainscot. Exterior of the building will be covered with rustic and cement plaster on metal lath Plans are complete and in the hands of the owner who will do the work by Day Labor, Materials are now being purchased.

SAN FRANCISCO-Flat, 2 story and base, frame, \$2,500. Architect, A. Richardson, 2877 Mission street, S. F. Owner D. Liebel, 317 Market street, S. F The present building located at 2905 and 2907 Pine street will undergo extensive alterations. When complete the structure will contain two modern flats of five and six rooms. Interior finish will be of pine and hardwood with oak floors in the living rooms and dining rooms. There will be open places andtile mantels. Bath rooms will have composition floors and tile wainscot. Automatic water heaters will be installed. Exterior of the building will be covered with rustic Plans are complete and the work will be done by Day Labor.

UAKLAND, CAL-Flats, 2 story and base, frame, \$5,000. Architect, Alvin J Stern, 1522 Broadway, Oakland. Owners, Coit Investment Co, The building will be erected at the corner of 51th and Dover streets and has been designed to contain four flats of four and five rooms. Interior finish will be of pine with hardwood floors in the principal rooms. There will be open the places and tile mantels. Bath rooms will have tile wainscot and composition floors. Marble and tile will be used in the entrance. Exterior of the building will be covered with cement plaster on metal lath. Plans are being prepared and when complete the work will be carried on by Day Labor.

SAN FRANCISCO-Flats, 2 story and base, frame, \$6,000. Architect, L. M. Hausman, Sharon Bldg., S. F. Owners, M. W. and J. H. Cain, 620 4th avenue, The building has been designed to contain two modern flats and will be exected on the north line of Clement street west of 15th avenue, the property having a frontage of 25 feet and a depth of 90 feet. Each fiat will consist of six rooms and bath. Interiors will be finished in pine and redwood with elm panels in the living and dining rooms. Oak floors will be used in the principal rooms. There will open fire places and tile mantels. Automatic water heaters will be installed, Bath rooms will have tile wainscot and composition floors. Exterior of the building will be covered with rustic and cement plaster on metal lath. Plans are in the hands of the owners and work will be done by Day Labor. All materials are now being purchased

GOVERNMENT WORK AND SUPPLIES.

Denver, Colo., Interior Finish.

The following bids were received by the supervising architect, Treasury Department, Washington, D. C., for the interior finish of the U. S. post office at Denver, Colo.:

Bid 1, Norman Ker Co., 1123 Broadway, New York City.

2. Thomas J. Steen Co., 30 Church, street, New York City.

3. Grant Fee, 2440 16th street, San Francisco, Cal.

4. Hedden Construction Co., 1 Madison avenue, New York City.

5. Wm. Dall, 501 Marion Building, Cleveland, Ohio.

 J. H. Wiese, 1301 City National Bank Building, Omana, Neb.

7 Frank Kirchhof Lumber Co., 7th and Lawrence streets, Denver, Colo.

Complete—Bid 1, \$686,000; 2, \$696,000, 3, \$710,000; 4, \$714,591; 5, \$756,400, 6, \$776,440, if marble other than that in the present building is acceptable for exterior marble work, \$703,-200; 7, \$798,750.

Presidia Stable Authorized.

The quartermaster general has directed the construction quartermuster, San Francisco, Cal. to advertise for bids for the construction of a stable at the Presidio of San Francisco.

Naval Armor Plate Plant.

The statement made to the House Naval Committee by the Secretary of the Navy and the chief of ordnance of the navy on the subject of a government armor plate plant are said to have been quite impressive. The statistics, which were submitted of course, have not been officially contradicted, nor have they been formidably questioned, to which they might easily he subjected, it is understood; for, as is so often the case, there happens to be two sides to this armor plant problem, and so mar the Navy Department has, naturally presented only one phase of the situation for the benefit of the committee. It is by no means certain that the subject will be regarded as of sufficient importance to engage the attention of the committee to a greater extent than the time already allotted to lt. Mr. Duniels has been able to present his case in so plausable a way as to give every encouragement to those who advocate the establishment and maintenance of a government plant for the manufacture of armor. It is the fashion now in Congress to take sides against the private plant and to support the cause of the government establishment, whatever or wherever it may be. At the same time, the amount of money which would be required to fully equip an armor plant gives pause to the committee, and probably nothing more definite will be accomplished at this session than the provision of means by which Congress may come into the possession of more information, which, in the minds of conservative representatives and senators, should be acquired before the government is committed to the expenditure of a large sum of money on the representation that the government can produce armor at much less cost than that of the material obtained under contract.

Pocatella, Idaho, Plaster Models.

The following bids were received by the supervising architect, Treasury Department, Washington, D. C., for furnishing plaster models for the U.

S. post office at Pocatello, Idaho: C. W. Buhler, 1130-19th street, N. W., Washington, D. C., \$178.

Co.; pendant switches, do: keyless sockets, Weber; reflectors, Holaphane; glassware, Lighting Studio Co.; canopy switches, Cutter-Hammer Mfg. Co.

Pearl Harbor Dry Dock.

There have been no hearings before the House Naval Committee, as was expected, concerning the resumption

of work on the damaged dry duck at the Pearl Harbor naval station, regarding which the Secretary of the Navy is in possession of reports from the experts who made a careful examination of the situation and presented recommendations. There have been numerous conferences at Navy Department during the past two or three weeks, attended by Representatives Padgett and Roberts, of the naval committee. It has been decided to proceed with the work along new lines, the approved plan contemplating the employment of floating boxes in the completion of the dock, in accordance with the recommendations of Civil Engineer F. R. Harris, U. S. Navy, and the civilian expert. Noble, who was specially engaged by the Secretary of the Navy to visit Pearl Harbor and make a thorough observation of the conditions there. There will have to be a committee hearing later, because it is evident that the limit of cost for the dry dock must be increased by \$1,500,000.

SACRAMENTO, STOCKTON & NORTHERN CALIFORNIA.

HOTEL-4 story and base, reinforced \$60,000, Arcada, Humboldt County, Cal. Architect, W. H. Wecks, 75 Post St. S. F. Owners, Arcada Hotel Co. A site has been secured at the corner of 9th and G streets and a new hatel and store building covering on area of 50 by 110 feet will be erected. There will be a number of stores on the first floor and 75 guest rooms and a number of private baths on the upper floors. Plans provide for steam heat, a hot water system and vacuum cleaning. There will be patent store fronts and metal window sash and frames. Interior finish will be of pine. Bath rooms will have tile wainscot and composition floors. Exterior of the building will be faced with cement Plans are now being preplaster. pared.

RESIDENCES—1 and 2 story and base, frame. Cost not stated. Sacramento, Cal. Architect, none. The following Day Labor Jobs are reported as about to be started in Sacramento; C. J. Hopkinson, 1318 25th street, 1 story, live-room residence, \$4,000, and E. G. Gross, 3119 East avenue, 2 story, 13 room residence and 1 store, \$4,000.

BRIDGE-Steel lift type. Cost not stated. Solano, Sacramento Co., Cal. Engineers, County Surveyors of Sacramento and Solano Counties. Owners, Sacramento and Solano Counties County Surveyor F. A. Steigler of Sac-Countles numento has been in San Francisco in conference with the Federal authorities in reference to the proposed bridge over the Sacramento River between Solano and Sacramento Counties at Rio Vista. The proposed bridge is to be about 3,200 feet long, consisting of 20 150-foot stationary spans and one 200foot lift span, under which the steamers will pass. It will leave a space of 100 feet in the clear when lifted. The plans call for a modern steel structure set on cylindrical piers driven to bedrock or into gravel. For one-half its distance the bridge will pass over the present river channel and the other balf will be what Is now, except in time of freshet, dry land. It is reported that Federal approval will be forthcoming.

COURT HOUSE-2 story and base, reinforced concrete, \$90,000. Alturas, Modor Co., Cal. Architect, F. L. De Longehamps, Reno, Nevada. Owners, Modoc County. base, brick and steel, \$45,000. Seattle, Wash, Architect, Charles H Bebb, Denny Bldg., Seattle. Owner, Edgar Eames. The building will be erected at the southwest corner of 2nd avenue and Stewart street, covering an area of 90 by 110 feet. There will be several stores on the first floor and a number of modern offices on the upper floor. Interior will be finished in pine and hardwood. There will be metal trim, metal window sash and frames and patent store fronts Sterm heat is specified. Exterior of the building will be faced with pressed brick Plans are nearly complete and figures will be called for shortly,

HARDWOODS OF PANAMA.

[Consul James C. Kellogg, Colon J The following report on hardwoods of Parama was compiled from data furnished by M. S. P. Verner, samtary inspector, 18thmlan Canal Commission, who has traveled extensively in the Provinces and is familiar with the

inspector, Isthmian Canal Commission, who has traveled extensively in the Provinces and is familiar with the forests and the timber industry of the country. The botanical names have been verified and corrected by the Forest Service of the United States Department of Agriculture.

The cacique (Eugenia lepidota. family Myrtacese) is a small tree, growing about 4 feet high and a foot thick in scattered clumps or thickets on the hills. It is comparatively rare and the timber should therefore be taken out in connection with the general lumber industry in any given locality. The timber is generally considered the most valuable in the Republic, being durable, hard, impervious to insects, and very beautiful. The ground color of the wood, when cut and aged, is a rich deep red, with black spots and stripes. The natives demand ut least \$5 for a cacique whipstock or cane, and such canes have sold in New York for \$25. The cured timber is quoted at 35 cents per pound. There are probably about 100,000 trees of timber size in the Republic, and the value of the timber, aside from the cost of getting it out, would be about \$7,000,000

The name of this tree comes from toe fact that the ancient Indian cheefs (cacques) used the wood for their scepters or batons of office. The ground wood is used by the natives as a styptic.

Caoha and Espave Trees,

The word caoba refers, in common Central American usage, to three kinds trees: Ganrea cuoha, Carapa gulaneasis and Swietenia mahagoni, All three occur in the higher parts of Panania. The first two attain a height of 100 feet or more. Their timber is so similar to Honduras mahogany (Swielenin mulingonl) that it is equally valuable-about \$90 per 1,000 feet. The Gauren carba will run from 3,000 to 5,000 feet per acre, and the amount now standing in the country is valued ot \$180,000,000.

The espave (Anacardium rhinocarpus. family Anacardiacem), often 5 feet thick at the base, grows to a height of 80 to 120 feet, of which 40 feet from the base is clear. Some of the large branches are available for lumber Some forests average 15 big trees to the acre. The leaves are large, somewhat heart-shaped, light green, and very abundant. The espave is prized so much by the natives as a shade tree that they usually spare it in clearing for planting. They use the timber, however, for their canoes, many of which last for a generation or more The wood is of a reddish boy color. resembling mahogany, for which it is often mistaken. It is close-grained. durable, and uniform in texture, takes a polish, and works readily. There are probably 1,500,000 of these trees in Panania. The timber is worth \$50 per 1,000 feet and the total value is about \$130,000,000.

Guayacan, Lauret, and Santa Maria. The guayacan (Tecoma chystatika, family Elgnoniacco) is somewhat smaller that most hardwoods, averag-

tus 70 feet high and 2 feet thick and launching 30 feet from the ground, The leaves are small and compound, and the grayish black back is rough and shaggy, with longitudinal furrows. The inflorescence is a mass of magnito ent golden blossoms. The wood, Lordost and most durable of the timlers of Panoma, is akin to the liguinivita (Guaiacum) of the West Indies. It is much heavier that water, and to be refled must be carried with lighter wood Railway ties of guayacan have been in use on the Panama Railroad for more than 50 years. Since it is so hard that holes had to be bored for the spikes, it might be advisable to work it ergen for some purposes. The small waste of the industry might be used for shuttle blocks, of which the supply in the United States is fast becoming exhausted. There are probably 1,000,-000 of these trees in Panama, worth about \$10,000.000.

The laurel (Cordin geriscenthus, tamily Borroginaeree, 2 feet in diameter, grows on hillsides to a height of 100 feet. The bark is white. The wood is yellow, hard, fine-grained, durable, and easily worked. It is said to be good for pling. There are probably more than 1,000,000 knirel trees in Pannana, with an average yield of 1,000 leet per tree and a total value of \$60,000,000,000.

The Santa Maria or calaba (Culophythum calaba, family Gutiferae) is a large everyteen attaining a height of 100 feet or over with more than 50 feet c'ear and with a diameter at the base of about 3 feet. The bark is comparatively thin, mottled gray and black, and slightly rough. It peels from the wood The wood is grayish white, readily as hard and elastic as bickory and also similar to teak. It is durable, straight, and close-grained, takes a good polish, and splits longitudinally better than most tropical hardwoods. It was used by the Indians for hows and is employed almost exclusively for palanquin poles. There is probably \$70,000,000 MOLIU OF INTS HUDGEL IN LAURING.

CONVENTIONS AT THE PANAMA-PACIFIC EXPOSITION,

Two bundred and six conventions now have been formally booked to meet in San Francisco in 1915 during the progress of the Panama-Pacific International Exposition. The last convention to be secured is that of the Netional Conference on Weights and Measures, which is composed of State weights and measures inspectors of weights and measures, manufacturers of weighting and measures units apparatus, and Pederal officials.

Thies of the other most recent conventions assured to San Francisco in 1915 are of the American Association of Masters. Mates, and Pilots of Steam Vessels; the American Druggists' Syndicate; and the American National Live Stork Association.

BOTH THE OWNER and the Architect are particularly interested in all kinds of building materials, power and heating systems, building specialties, experi of building materials, power and heating systems, building specialties, every accessory that goes into their project. Every issue of the Building and Industrial News contains hundreds of new building and construction reports giving the names and addresses of both the owner and the architects. Both the owner and architect receives a copy of the Building and Industrial News containing mention of their individual job conspicuously marked. Thus the builder and the architect have in their hands not only the news items of their particular project, but also the announcements and the advertisements of energetic business men who have goods to sell that are necessary to construct and equip the undertaking. IS YOUR ADVERTISEMENT AMONG THESE?

Catarrh Can Be Relieved

HERE IS NO NEED for you to continually suffer from Catarrh and Cold in the Head. It makes you miserable, doesn't it? Roofing Gravel to 1-2 inch Cobble Stones for Bungalows.

With a Modern Equipped Plant at Niles We Are Able To Give All Orders PROMPT ATTENTION

CALL Douglas 2944

The Hotel is only as good as its service

The new Ritz-Carlton Hotel, in Philadelphia, has four Electric Elevators and six Electric Dumbwaiters, furnished by the Otis Elevator Company.

> ARCHITECT Horace Trumbauer

Other Hotels of the Ritz-Carlton chain which are Otis equipped---

The Ritz-Carlton, New York

The Ritz-Carlton,

Montreal

The Plaza, Buenos Aires Grand Hotel et de la Plage Guaruja, near Santus, Brazil

The Carlton, London The Ritz, London The Hyde Park, London

The Ritz, Paris

And its service can be only as good as its elevators----which is one good reason why bostelries with reputations to maintain, like the latest link in the Ritz-Carlton chain, at Philadelphia, have

Otis Elevators

Choosing from the various Otis machines, the Architects can provide hotels with elevators of the type called for by the character of the structure and insure perfect service---can equip all buildings of all classes in accordance with their needs.

Give a building musatisfactory clevator service, and its other excellence can not overcome the handicap. Our offices in ninety-one cities in the United States are always at the Architect's call and can assist you in making your elevator—specifications—100 per cent correct.

OTIS ELEVATOR COMPANY

Stockton, North Point and Beach Sts. San Francisco

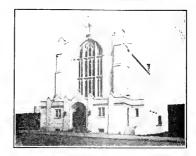

Offices in all Principal Cities of the World.

Frank Neidick

Carpenter and Builder Phone Mission 5126

2669A Howard St., Bet. 22 nd and 23rd

San Francisco

As a carpenter and builder, Mr. Neidick has had twenty-two years of experience, during which time he has mastered the business in all its details and has established an excellent reputation for the high character of his work. This statement is proven by the fact that he has built fifty-six blats for one man all of which were erected in the most satisfactory manner. Not only is the work of Mr. Neidick of the highest standard, but his business relations with the public are characterized by the strictest integrity. Mr. Neidick has brought to a successful issue many contracts throughout this city, which stand as a testifying demonstration for his knowledge and ability in his line of business. He is also a prominent stockholder of the General Contractors' Association.

Editorial Comment.

How fast the affinirs in Mexico are moving remains to be discovered. Only one thing is certain and that is that life and property is not safe there for any person. So as events move forward the time will soon come when the powers of earth will have to unite in putting an end to a state of anarchy in the country to the south of us or there will have to be some representative of constitutional government arise that is strong enough to maintals order and maintain some semblance of proper government. It is a sorry mess and the outlook is not at all hopeful.

Despite the weather prophets March has come in like a lamb, and a spring lamb at that, gamboling on the green of California hills. After two months of rain storm the first month of spring has opened with bland skies and open sunshine. Abundant rains of the winter speaks for a fruitful With the currency question settled and the new tariff adjusted, business should rapidly and permanently adjust itself. A prosperous season means a prosperous year and a prosperous year means better buildings and more of them. We can stand the rain and storm. For after the storm comes the sunshine and the rains are the life Hood of the State. Whether we get iny more rain in March or not we are practically assured a prosperous season in California

Building construction for the month of February went along at a ration for February went along at a ration show paice in San Francisco, the total for private work amounting to \$1,091,19 and an additional amount of \$319,-325 for Panama-Pacific work. This was less than two million, although the city let contracts to the extent of \$291,125 for buildings and \$193,313 for street and sewer work. To this is added \$233,533 for State work in the city bringing the total up to \$2,331,865 all together.

February is a short month and considering the rainy winter the total is about up to the average for the month. In February, 1913, the total construction for San Francisco amounted to \$2.736.813. So that the difference is comparatively small.

One tiling about the record for lost month is that the contracts for brick buildings and perminent construction was small, the total amounting to \$400,075 as against \$541,938 for frame construction. So that the building record for the past month is mainly one of small buildings, residences and buildings outside of the fire limits. In detail the figures are as follows:

Brick & concrete constr.\$ 404,074

Frame	541,938
Alterations	145,136
1 P. I. E. work	519,325
City Buildings	294,125
City streets and sewers	233,953
_	

Total ...\$2,331,866 The total for January, 1914, amounted to \$1,528,553 so that even with a short month there was a substantial gain.

Compared to former years the figures are as follows:

ec ao	TOTTO WS.	
	February.	
1985	\$1,200,880	}
1006		8
1907	4,355,513	3
1908		3
1909		6
1910	2,066,03	ı
1911)
1912		2
1913		0
1914	2,331,866	6

It is to be noted that 1913 and 1911 contain the City, State and Government contracts, while the years previous to that do not. It happens, however, that both in 1913 and 1914 there was less than half a million contracts let for all these combined for the month of Pébruary. So that while last month was slow so far as business is concerned it was about an average for the years.

Architect G. Alexander Wright keeps steadily at the proposition of seeking letter methods of estimating. His latest issue of the Quantity Surveyor reterates his oft repeated statements concerning letter estimating and contact methods and draws especial attention to the fact that the system that le advocates necessitates the farnishing of perfectly clear drawings, complete specifications, and final interpretation of all doubtful questions before a contract is let.

This is at least one important reform that should be effected. Most contractors go broke because of incomplete data. During periods of depression, at least, the fellow who makes a mistake usually gets the contract and then he discovers it too late.

Indefiniteness is the great with the building game. It is the clock that covers a multitude of sins. It hides the incompetent architect and permits him to side with either the owner or the contractors as his interest may dictate. And it is usually the rock upon which the responsible man is wrecked. Clear drawings and complete specifications are the first requiste to a definite contract. Final interpretation of doubtful questions befure the contract is let would remove the cause for most of the disputes and expensive litigation. Architect Wright is on the right track. He should have the support of all who desire to better the building business.

Scientific Sewage And Garage Disposal.

Reports from Foreign (Itles by the U. S. Consular Service.

paying creased attention to the problem of nurritying sewage before discharging it into rivers or other bodies of water. The necessity of such purification is generally recognized, but the selection of an economical and efficient method to meet the requirements of a particular city is a difficult matter. Much can be learned from the experiments of the comparatively few American cities that have attempted scientific treatment of sewage, and the methods adopted in certain European cities, especially in England and Germany, are particularly interesting and instructive. For instance, a number of European cities have attempted to by meet the expense of purification selling sludge to farmers and by using liquid sewage on irrigation farms.

The following synopsis of a series of consular reports on the subject of sewage and garbage disposal Europe aims to show what progress has been made in a number of cities where scientific methods have been adopted. The reports were prenared by the consuls at the request of the commission on sewage disposal by one of the largest American cities. Citios with a population of less than 50,000 have not been included in the synonsis. nor have cities that make no attempt at sewage purification; the latter include nearly all the municipalities of southern and eastern Europe, as well as a few others located near the sea-Reports from London, Berlin, and Paris were not called for,

Annual reports on the operation of sewage-disposal plants are issued by most of the cities mentioned, and these, together with other details that may be desired, con usually be obtained by addressing the engineering departments of the various cities.

UNITED KINGDOM

Birmingham Consular District.

In Birmingham the household wastes and street washings flow through the same sewers. More than half the houses of the city are connected with sewers. The sewage is first run into settling tanks and then treated on biological filters. The sludge is treated biologically, rendered inodorous and afterwards dried on drying beds. The first attempt to eliminate impurities from the sewage was made in 1859, when two precipitation tanks were built and several acres of land acquired for prigation. The purification effected was not satisfactory. Several methods of chemical precipitation were subsequently tried, but in 1871 a committee reported adversely these methods. Since then the tank capacity has been greatly increased and a much larger area acquired for irrigation. Street sweepings, garbage, and ashes are burned in incinerators.

In Wolverhampton, a city with a population of over 95,000, sinks and water-closets are connected with sewers. There are some 10,000 pan closets, which are emptied weekly and the

contents, mixed with ashes, sold to furmers. Separate sewers are provided for street washings in about twothirds of the horough. The sewage is subjected to precipitation with lime, followed by land filtration. The sludge is pressed and sold to farmers in whiter and air-dried on land in summer. Septic treatment of sewage was tried, but was considered unsatisfactory.

In the city of Bradford, population 288,000 household wastes and street washings are run into the same sewers. The sewage is nurified by chemical precipitation and filtration. The sludge is filter-pressed for the extraction of wool grease, the yearly value of grease recovered being about \$250. 000; part of the press cake is sold as manure at 74 cents a long ton, and part is used as fuel. The first method of sewage purification tried in Bradford was filtration through peat. Later time precipitation followed by filtration through coke was tried, but this method also failed. The street sweep-Ings are tipped onto vacant land, and house garbage and ashes are Dart tipped and part burned.

In Halifak, population over 100,000, household wastes and street washings flow into the same sewer. The sewage is treated in precipitation tanks and bacterial filters (double contact beds and percolating filters.) The sludge is pressed and carted away by farmers. Street sweepings, garbage, and ashes are tipped onto vacant land

Leeds Consular District.

The city of Leeds has a population of 445,000 and maintains five sewage works. Household wastes and street washings flow into the same sewers. The sewage is subjected to hacteriological treatment after chemical precipitation and the sludge is pressed into cakes and disposed of as fertilizer. Sixty per cent of the house garbage and ashes collected in the city is disposed of in destructors; the remaining to per cent is deposited on land manure or is used to fill quarries. The street sweepings are sold at 18 cents a ton to farmers and market gardners For 10 years the city has experimented with practically all the known metheds of treating sewage

In Wakefield, a town of 51,000 in habitants, located 9 miles from Leeds, the household wastes and street washbes are run into the same sewers, although there are a number of special storm sewers to take away surface waters from the streets. The sewage ta subjected to chemical pre-initiation percolation through bacteria beds, and settlement in humus tanks. sludge is trenched into land formerly seed for filtration purposes At one time land filtration after chemical predisting was tried. but the proved unsuitable.

Previous reports on sewage disposal in Leeds and Wakefield were published in Daily Consular and Trade Reports for October 21, 1910. A detailed description of the methods employed in Wakefield, furnished by the horough engineer, may be had from the Bureau of Foreign and Domestic Commerce, washington, D. C

Sewage Farming at Liverpool.

Nine-tenths of the sewage of Liverpoor is discharged into the Mersey without treatment of any kind. The remaining one-tenth comprises tina sewage of districts known as the West Derby and Walton and is treated on the West Derby and Walton sewage farms, the system adonted being broad Drigation without chemical treatment but assisted by bacterial and stormwater beds. The West De by farm has an area of 207 acres and receives the sewage of about 56,000 inhabitants The Walton farm has an area of .-? . cres and receives the sewage of about 6! 800 inhabitants. The crops on both tums consist chiefly of rye grass, calo buses, potatoes, mangel-worzels, and

Manchester Consular District.

In Salford, a town of 231,000 lying opposite Manchester, one system severs is used for orth household wastes and street washings. The sewage is subjected to chemical precipitation in which lime and salts of iron are used and the tank effluent is then passed through rough filters and finally bacterial filters. The sludge is sent to sea in a 60-ton sludge steamer. Street sweepings are sold as manure, and the house garbage, ashes, etc., are burnt in destructors. Many methods of sewage purification, probably 20 to 30, have been tried in the last 25 to 30

In didham, a town of more than 117 000 population, all knosehold wastes and street washings are carried off in the same sewers. The seware is treated by precipitation, settlement, and contact and sprinkling beds. The sludge is given to farmers. Street sweepings are used as manure, and garbage and ashes are burned in destructors.

Sewage Disposal System of Sheffield, Until 1886 the sewage of Sheffield flowed in an untreated condition into the rivers and watercourses. In that year a main sewerage scheme was completed at a cost of \$750,000, and sewage-disposal works were constructed at a further cost of \$220,000, the process adopted being that of lime signed to freat a flow of 10,000,000 gallons of sewage per day, but for several years a flow of 17,000,000 gallons has been dealt with, and since 1886 the nonulation has increased from 304,720 to 470,000, and the introduction of the water-carriage system, the extension of the drainage area, and the increased requirements have necessitated improved methods of treatment in addition to increased capacity, was finally decided after exhaustive experiments to adopt a scheme consisting of continuous-flow settling tanks and contact heds. The local government has approved the scheme, which is now partly in operation, and the remainder is approaching completion.

The estimated cost of the extensions was \$1,350,000, but it appears probable that the work will be completed for \$35,000 less than that amount. In addition to this the city has bought lands for the present works and future extensions at a cost of \$130,000

The principal features of the scheme include a new main valve chamber, into which a 5-foot barrel sewer discharges and also a 7-foot duplicate sewer. A storm-water overflow ranged to discharge the excess flow glove 64,500,000 gallons per day to a storm-water conduit is fixed in the chamber

A large penstock, with opening 5 by 12 feet, admits the sewage to a conduit 12 feet wide, which conveys it to the catch pits. Two pairs of catch pits, 42 feet long, 29 feet wide, and 13 feet deep, have been constructed, they are fitted with new screens, which extend the whole length of the pits and which are cleaned by hand rakes. The catch pits are in the form of a double hopper and retain the heavier crit garbage and larger objects. Each pair is fitted with endless-chain bucket elevators for cleansing purposes. Two additional catch pits have been added, approximately twice the size of the older ones, and fitted with mechanical screens and an electrically driven traveling bucket dredger. The sewage passes from the catch pits through branch and main conduits I feet, 16 feet, and 20 feet wide, built in brick and covered with girders and concrete to the settling-tanks. The complete scheme includes 17 continuous-flow settling tanks, each holding approximately 1,000,000 gallons, which are now in operation

Sixty contact beds, each half on acre in area, and 16 storm beds of similar design but twice the size are in course of construction. The works will provide for the treatment of a maximum quantity of 64,500,000 gallons of sewage a day, and will be one of the largest of its kind.

Sheffield has two extensive garlinge destructors, the refuse destroyed in 1912 and 1913 amounting to 42,898 and 33,805 tons respectively, at a cost of \$28,760 and \$21,450. For dumping 35,-663 tons of garbage requiring railway transportation there was expended, in addition to these amounts, \$20,435.

A plant for converting fish refuse into fertilizer recovered 82% tons during 1913; it was sold at a profit to the municipality of \$600. There is also a can-bundling plant that handles 300 to 400 tons of used cans a year,

Methods Employed in Belfast, Ireland, The single-sewer system is in use in Belfast. At one time all sewers emptied directly into the River Lagan, but sedimentation tanks are now used and the purified effluent is stored in ponds until high tide, when the discharge commences. The sludge is pumped into a ferro-concrete loading tunk, whence it is discharged into a steamer and carried to sea. Experiments have been made with various systems of sewage disposal, but the city authorities are of the opinion that the method now used is the most economical for a city situated on the seashore. A refuse destructor having 12 cells, each with a capacity of 10 tons per 21 hours, has been constructed. An Incinerator furnace has been added. and in this are consumed all infected articles, typhoid excreta, diseased carcasses, fish offal, and other objectionable material. Unobjectionable matter is either used to fill up hollow ground or sold for manure.

Glasgov Consular District

The single-sewer system is used in Glasgow, Scotland, and the sewage is purified by chemical precipitation; a portion is filtered. A portion of the sludge is filter-pressed; the bulk of it is sent to sea. Part of the street sweepings, garbage and ashes is destroyed in destructors and part sold Reports on the garbage disposal system of Glasgow were published Daily Consular and Trade Reports for October 21, 1910, and March 12, 1913, A copy of the annual report of the manager of the sewage-purification works of Glasgow will be loaned by the Burean of Foreign and Domestic Com-

In Greenock, a town of over 74,000, the household sewage and the street washings are carried off in the same sewer; the sewage is emptied the river without previous treatment. Street sweepings, garbage, and ashes are sold as manure, tipped onto vacant land, or sent to the destructor, depending on the character of the material.

GERMANY

Barmen Consular District.

Barmen, a city of 172,000, depends chiefly on the Trennung (divided) system of sewerage, in which the sewer has two parts, the upper and larger for street washings and the lower household wastes. The street washings are emptied directly into the river. The sewage is mechanically cleared. An experimental plant for further purification has recently been put into oper-Street sweepings are dumped. Garbage and ashes are hurned in the municipal garbage plant. The present garbage-burning plant was constructed in 1907 and has given satisfaction in every respect. Not only is the city's garbage disposed of in a sanitary manner, but incidentally a fine quality of sand is produced, and the heat produced by the burning garbage is converted into electricity. The slag is reduced by crushing to various grades of sand that have been used with splendid results for building purposes and for the manufacture of bricks. The hot gases from the burning garlage are conducted to a boiler, and the steam raised is used to run a steam turbine that is connected with a dynamo. The current developed is sold to the municipal electric works at 0.833 cent per kilowatt hour. The plant produces annually 11,000 tons of slag or clinkers from 22,000 tons of garbage, and the electric current produced amounts to 1,700,000 kilowatt hours per year.

Elberfeld, population over has the double-sewer system in some parts of the city and the single system in others. The sewage is treated in mechanical settling basins, and the sludge is used for filling in land. Street sweeping, garbage, and ashes are also used for filling in.

In Dusseldorf, population 400,000, household wastes and street washings are carried off in the same sewers. The sewage is purified in a Fein-Recheminlage (fine raking plant), and the sludge sold to farmers, Street sweepings, garbage, and ashes are carted away at present, but a plant, for burning such refuse is contemplated, and it is planned to use the waste of this plant in making artificial stone, fertillzer,

Hamburg Consular District.

Hamburg, with a population of over 1 000,000, is located on the Elbe River at a point where the tidal ebb and flow amounts to 6.56 feet, and where conditions are such that the current of the river itself is disregarded as an influence in the matter of sewage disposal. Household wastes and street washings flow into the same sewers. The contents of the main sewer, before being discharged into the Elbe, pass through collecting basins in which the swinging dredges continually remove solld and floating material, which is then transferred in barges to a lowlying Island in the river, the level of which is being slowly raised. waste water then flows into the river through three final discharging pipes. Owing to the tides there is a steady circulation of fresh water and a continual churning of the refuse, which facilitates its destruction. No general attempt has been made to sterilize sewage at Hamburg. Garbage and ashes are collected in carts and incinerated. Previous articles on sewage and garbage disposal in Hamburg have been published in Daily Consular Reports for October 21, 1910, February 13, 1912, and March 12, 1913.

Harlung, with a population of 67,000, is located on the south branch of the Elbe opposite Hamburg. Separate sewage systems are maintained for maintained for household wastes and street washings, and practically all houses are connected with the sewer system. All waste water is led into a clearing plant, where by means of dredging rakes and cesspools it is mechanically clarified. No other process has ever been employed,

In Rostock, population 70,000, the household and street wastes flow into the same mains, and the sewage is purified in Emscher wells or cesspouls, Gurbage and city wastes of all kinds are collected and used for filling land.

RIESNOR

Method of Purification Employed in Itheims,

In the city of Rheims, with a population of 115,000, the kitchen sinks in the modern buildings are connected with the sewers, and in about 200 of the 13,221 buildings of the city the water-closets are also connected, Ruin water is carried off in the storm sewers. Since 1885 the city has clarified the sewage by irrigation on agricultural land. This purification, which is considered very satisfactory, is effected on fields of a chalky nature comprising some 1,400 acres. The work is carried out by a private company. Previous to 1885 chemical purification was attempted, but proved a failure. The street sweepings, garbage, and ashes are carried away by private contractors, to whom the city pays annually about \$15,000. After sorting, this refuse is sold for fertilizing purposes. The authorities are considering the advisability of changing this method of utilizing the city sweepings.

Brickmaking from City Refuse in the Commune of Villeurbanne.

In the commune of Villeurbanne, adjacent to the city of Lyon, the city refuse is burned and bricks are made from the residue. This has been a prihas arranged for the purchase of the crematory. The crematory is a model plant, and annexed to it is a brickpressing plant. The furnace serves not only to burn the refuse, but also to operate, by steam, the various ma-

chines in the factory.

The residue from the furnace is first carried through a series of heavy rollers, after which it is delivered in the vate enterprise but the municipality form of a fine powder to a mixing Here is it is mechanically trough. mixed with a heavy lime in the proportion of 80 per cent of residue to 20 per cent of lime. This mixture is emptied into another longer trough by a system of buckets operated on a chain, where the proper amount of water is added, and the material is then fed to the brick-pressing machine. which is of English manufacture and capable of turning out 20,000 bricks per day. After 28 or 30 days the drying is completed, but the bricks are as a rule not used for 60 days from the time they leave the press. The only kinds of refuse not used in this manufacture are empty cans, metal barrel boops, and other similar waste that may easily he sold as scrap metal.

The bricks sell at the factory in ordinary wholesale quantities at \$5.79 per thousand If ordered in very large quantities, this price is sometimes reduced to \$5.40, or even \$5.20. The bricks are of good quality, strong and durable, and light gray in color. They are said to be especially appreciated by the masons on account of their smooth surface and even edges. It must be understood that the above prices are those of a private concern, which would naturally be interested in making the figures as high as possible Were the work completed under municipal supervision, the cost of mannfacture would be less, and the expense of disposing of the city waste could probably be fairly met by the profits derived from the incineration of the refuse and the building material made therefrom.

AUSTRIA

Sewage Disposal in Prague.

The sewage from the city of Prague population 575 000 is conducted through four large sewers to a cleaning plant at Bubenc, one of the suburls. The sewage is first passed through a system of screens, which catch the coarser materials. The balance of the material then passes along. and is distributed to 10 oblong basins 285 feet long, 18 feet wide, and 9 feet deep, where the solid substance settles to the bottom. About 163 cubic yards of sediment re-ults each day. The thinner sediment is conducted onto an island, where it flows into trenches, and during the winter months the sediment from these trenches is taken to a point down the river Moldau, where it is again placed in open trenches to evaporate when it is sold as fertilizer. It is taken down the river in closed tanks on open boats. After removing all the solid substances the water remaining runs into the river. Kitchen sinks and water closets are connected with the sewers. The street washings flow into the same sewers. Practically the entire city is provided with sewers for household waste. There has not been any other method of treatment. Street sweepings, garbage, and ashes are hauled to depositaries in the suburbs and sold to farmers.

BUISSIA

Modern Methods of Sewage Disposal in Moscow.

The city of Moscow has a population of about 1,580,000, and about 40 per cent of the city is provided with sewers for household wastes. A separate system of canalization is provided to carry off the street washings. The sewage is filtered on sewage fields and part of it is subjected to biological treatment on the city station. The sewage fields are giving very good re-The waters, after passing several filters, are used to irrigate plantations of cabbage and other vegetables, which find a ready sale in the The city is still making experiments with the biological purification of the sewage

Sewage Disposal in Odessa.

The sewage of the city of Odessa. population 520,000, is to a large extent used on irrigation fields, where it gives excellent results. Good crops of vegetables are obtained and fair results have been obtained with wheat. The street sweepings, garbage, and asbes are dumped outside the city, although a small portion is destroyed in a destructor.

TRIBUTE TO JAMES A. WILSON.

Masons and Builders Pass Resolutions of Respect and Appreciation of Late President of Builders' Exchange.

San Francisco, March 2, 1914. WHEREAS, the hand of Providence baying removed from our midst our

highly esteemed friend and associate, James A. Wilson, whose genial nature, ability and integrity made him available as a certain choice for the highest honors at the hands of the members of all the many fraternal and business organizations with which he was affiliated, and

WHEREAS, through all his associations during his long and useful life he reflected credit upon the bricklaying craft, of which craft he was a past mister, therefore be it

RESOLVED, that the members of the Masons' and Builders' Association of San Francisco take this means of expressing our heartfelt appreciation of the hallowed memory of our departed brother, and in regretting his removal from our midst we mourn for one who was in every way worthy of our respect and regard, and be it further

RESOLVED, that in the death of James A. Wilson the Masons' and Builders' Association has lost a true and faithful exponent of the ancient and honorable craft and the City of San Francisco has lost a leading progressive citizen whose example should be emulated by all who would better themselves and the community, and be it further

RESOLVED, that we sincerely contiole with the children of our departed brother and congratulate them that their father has left them as a heritage an honored name, which is more to be desired than great riches.

> N. LARSEN. JOSEPH J. PHILLIPS, E. J. BRANDON,

Committee.

MOTOR TRICK ON ITS WAY TO

"A Federal Passenger Truck ie ently delivered to Atkins, Kroll & Co. in this city, is the latest commercial our of this type to be exported," says P S Nichols, Commercial Car Manager of the Pacific Kissel Kar Branch,

"In the past two months," Nichols, "we have exported no less than five of these trucks-three to the Hawaiian Islands, one to Tahiti and one to South America, and from this fact it is very evident that these foreign climes are going to prove quite a harvest to commercial car dealers in San Francisco."

Firms desiring news on special classes of buildings, such as Banks, Churches, Schools, Hotels, etc., will find such litems nil classified and grauped under proper hendings, commencing on this page, These same Items are again repeated under "LOCALATIES" in the lost part of our news department.

APARTMENT HOUSES.

SAN FRANCISCO-Apartment house. 5 story and base, brick and steel. \$35 .-600. Architect, W. G. Hind, 16 Kearny street, S. F. Owner, Dr. Clyde S. Payne, This building will be erected on the north side of Bush street, 90 feet west of Stockton, and will have a frontage of 50 feet by a depth of 68 feet 9 inches A modern French style of architecture has been used. There will be four stores on the first floor and a total of 24 two and three room suites on the upper floors. Interiors will be finished in redwood and white enamel. Oak floors will be used in the living rooms and halls. Plans provide for steam heat, an automatic elevator, portable vacuum cleaners and a hot water supply. All suites will have wall beds and private bath rooms. rooms will be finished in tile with composition floors. Entrance and lobby will have marble and tile wainscot Exterior of the building will be faced with white enamel brick. Plans are complete and segregated figures are being taken on the various parts of the work.

SAN FRANCISCO-Apartment house, 3 story and base, frame, \$22,000 Architect, Charles J. Rousseau, 46 Kearny street S F. Owner's name withheld. The hullding will be erected on Scott street near Lombard, close to the Exposition grounds, and will cover an area of 50 by 100 feet. The design is in the Classic style. Interior will be arranged for 18 apartments of two and three rooms, some of which will have dining rooms connected with the llving room by sliding doors. Interior finish will be of pine and hardwood veneer. Oak floors will be used. There will be steam heat and a hot water system. All apartments will have wall beds and private baths. Tile wainscot and composition floors will be used in the bath rooms. Entrance will be finished in tile and marble. Exterior of the building will be covered with pressed brick veneer. Plans are being prepared.

SAN FRANCISCO-Apartment house, 3 story and base, frame, \$12,000. Architect, Ernest Hildebrand, Crocker Bldg., S. F. Owner, Ernest Hildebrand. The building will be erected on the west side of Larkin street near Union and has been designed to contain 12 modern suites of three and four rooms. Interior finish will be of pine and redwood with some oak floors. There will be steam heat and a hot water system. Bath rooms will be finished in tile with composition floors. All suites will have private baths and wall beds. Exterior of the building will be covered with cement plaster on metal Plans are complete and segregated figures are being taken.

SAN FRANCIS-O—Apartment house addition, 1 story, frame, \$2,500 Architect, Henry Shermund, Mills Bidg., S. F. Owner, Henry Proll. The present building located at the southest corner of Clay and Larkin streets will be altered and an additional story con-

Removing Rock, San Francisco Bay,

The Standard American Dredging Co., of San Francisco, Cal., presented the successful bid at \$61,500 for removing Centisima rock near entrance to San Francisco Bay, Cal.

Submarines for the Navy.

The Secretary of the Navy has decided upon the award of three submarines authorized by act of Congress approved March 4, 1913. Bids were opened for these submarines on December 2, 1913, but the decision as to award of contracts has been delayed, owing in part, to the financial state of one of the companies bidding.

The secretary has decided upon the

following awards:

To the Electric Boat Company, two submarines of their type 37-H, to be huilt at the works of the Fore River Shipbuilding Corporation.

One boat of the Lake Torpedo Boat Company's type, to be built in a navy yard; complete detail working plans for this boat and license to construct are to be furnished by the Lake Torpedo Boat Company. The navy yard et which the vessel will be built has not yet been decided upon.

The contract for the other submarine has not yet been awarded.

American Firm Secures Italian Aqueduct.

Walter Wood, a representative of the firm of R. D. Wood & Co., of Philadelphia, which secured a contract on February 4 to furnish 45,000 tons of pipe to be used in the construction of the Apulia aqueduct, is in London trying to discount \$2.500,000 of treasury honds, payable in three years, the proceeds from which are to be used in filling the contract. If Mr. Wood is successful in this transaction, and this is practically certain, be may secure another contract for 50,000 tons of cast iron pipe, as the terms offered by his firm are more advantageous than those of the Italian, French, British. and German firms, which combined to divide the contract. The Apulia aqueduct, which is expected to be completed in 1921, will be largest in the world. The course of the Sele River has been diverted. A collecting basin has been built at its source, 1,370 feet above the level of the sea, whence the waters are to be conveyed by tunnel for seven and a half miles, penetrating a watershed and then the aqueduct, which is 155 miles long, to the Apullan provinces of Bari, Foggia, and Leece. The aueduct is to cost \$32,000,000.

Reclamation Work.

The Rectamation Service is asking for proposals for earthwork and unnet. Patho Canals, in connection with the Flathead irrigation project in Montana. The work is located about six miles southwest of Polson, Mont. and involves about 2,400 cubic yards of open-cut excavalion and about 520 lift of tunnel. Bids will be opened at 2 o'clock p. m. March 20, 1914, at the office of the Reckmation Service, St. Lignatius, Mont.

Poentello, Idaho, Post Office.

As previously reported, the contract for the construction, complete, of the U. S. post office at Pocatello, Idaho, was awarded to Palmberg & Mettson, Astoria, Ore., at \$93,575. In the construction of the building fixtures and material manufactured by the following named firms will be used: Plumbing fixtures L. Wolf Mfg. Co.; direct cast-iron radiators, American Radiator Co.; wall radiators, do; radiator valves, Jenkins Bros.; cabinet and tablet Frank Adam Electric Co.; conduit, the Conduit Co. (Ltd.); rubber-covered wire, John A. Roebling's Sons Co.; lighting fixtures, Frank Adam; pendant switches, Cutler-Hammer Mfg Co.; insulating joints, Macallen Co.; keyless sockets, Perkins; chain-pull sockets, Bryant; porcelain sockets, Pass & Seymour; indirect radiators, American Radiator Co.; damper regulator, do; plug receptacles and snap switches, General Electric Co.; flectors, globes, and glassware, Holaphane; air valves for end of steam mains and indirect radiators, Monash-Younker Co.

This cement is for use on the Okanagan project, Washington, and the St. Mary storage anlt of the Milk Rover project in Montana.

San Diego, Cal., Vault Shelving.

The contract for installing metal vault shelving in the U. S. post office, San Diego, Cal., has been awarded to the Berger Mfg. Co., Canton, Ohlo, at \$1,122; time to complete 90 days.

Availability of Navy Funds, Secretary Daniels has made an important recommendation to Congress to the effect that 10 per cent of the annual appropriations for the naval establishment, exclusive of public works and increase of the Navy, shall be available interchangeably for expenditure on the objects named in the appropriations. This is to be done only in cases of emergency arising subsequent to, and unforseen at the time of submitting the annual estimates to Under the various annual Congress. appropriations there are always sufficiently large amounts of unexpended halances to more than offset the amount of any deficiencies that may be curred in other appropriations. With this provision on the statute books it

would be possible to transfer from one appropriation where the money is not required to the appropriation which is delictent a sufficient amount to offset the deficiency and obviate the necessity of going to Congress for additional money when the unexpended balance under the Brst appropriation would be carried to the surplus fund. The present practice swells the apparent total of appropriations for the naval establishment without actually increasing the amount of money drawn from the treasury. Such a provision would also enable the department to take care of serious casualties which might occur. For instance, if the hull of one or more of the vessels was seriously damaged, necessitating extensive repairs at a time when no funds were available under the appropriation for repairs to hulls, it would be possible to take the money from another appropriation where the need for work was less pressing and make immediate repairs to the hull of the damaged

MARE ISLAND, SOLANO CO., CAL—MARZAIDE MUIDING, STORY, reinforced concrete, \$12,500. Architects, Bureau of Yards and Docks, Washington, D. C. BOTH THE OWNER and the Architect are particularly interested in all kinds of building materials, power and heating systems, building specialties, every accessory that goes into their project. Every issue of the Building and Industrial News contains hundreds of new building and construction reports giving the names and addresses of both the owner and the architects. Both the owner and architect receives a copy of the Building and Industrial News containing mention of their individual job conspicuously marked. Thus the builder and the architect have in their hands not only the news items of their particular project, but also the announcements and the advertisements of energetic business men who have goods to sell that are necessary to construct and equip the undertaking. IS YOUR ADVERTISEMENT AMONG THESE?

Catarrh Can Be Relieved

THERE IS NO NEED for you to continually suffer from Cotarrh and Cold in the Head. It makes you miserable, doesn't

Editorial Comment.

England has decided to exhibit at the Fair. This is as it should be for England above all is a manufacturing and commercial country and its shipping ranks easily first of all nations of the world. As the canal changes the worlds routes of commerce the natural place for such a representation is at an exhibition commemorating the event.

There has been quite a number of world's fairs within the last twenty Manufacturers have been called upon to exhibit thereat and the manufactured product is no longer the object of interest to the average person that it once was. The show windows of the hig stores of the great cities daily exhibit almost every product of the world. So that to be of interest to the average person the manufacturer must exhibit the process. This in many cases is undesirable from the manufacturer's standpoint. discloses patents and methods of manufacture that they do not wish to disclose.

So also the objection is ruised that a general world's fair can not reach specialized industry as the field is too large and too complicated. This in a great measure is true as it is impossible to have a complete exhibit of cerytium; But the exposition will give an opportunity to exhibit for all people who are seeking a market throughout the world. For it is the last great event in shortening the lines of transportation and marks a distinct change in the world's progress.

The question come up periodically as to providing a means of access to the Maria shore from the north beach of San Prancisco rather than have the loats land at the ferry as they now do. It is only a question of time till this is done and on the completion of the Stockton street tunnel the plan will become more feasible.

It would cut the bay trip in half, It would lessen the danger of collision on the bay and prevegt congestion of traffic. It would shorten the distance and lessen the traffic on the lower end of Market street. The time will soon come when something like this will have to be adopted.

A picture of the remarkable growth of New York City is given by Docton Lyman Abbott in a recent number of The Outlook. In the article he quotes a description of New York in 1810, which he wrote when a young man At that time the great metropolis had a population of 312,300,. And the stitude of the men in charge of the unniched affairs is characterized by

blm as wanting in foresight and planning for the future.

"There was no forelooking." Doctor About say, "to see what public incress demanded. No adequate changes had been made in the form of municipal government, * * The municipal government was a prize, not a trust. The best citizens were too busy in attending to their own interests to care for those of the municipality. By common consent the administration of its affairs was allowed to fall into the hinds of men who had no interests of their own to attend to.

The city's appearance reflected the in-fibiency of its government. The fraveler handling at a wharf, foctor Molorit save, but to fight his way through a nob of profane backmen. The streets were ill-lighted and worse pavel. In many thoroughfares there was no paving at all, and forses sometimes stuck in the mad. Up to 1M1, there was no sever system. At that time a resolution was finally adopted, after a bard fight, to permit pipes which had been installed as drains to be used as severs.

There was no police force. Constables and deputy sheriffs were on duty by day. At night laborers were employed as night watchmen. "Broadway was so infested at night that no person could pass through it after nightfall with impunity. Disorderly women thronged the public thoroughfares, insulting almost every passer-by with their obseene jests and borriole prolanity. No lady could venture into the streets alone.

"If there has been an ordinance audist throwing garbage into the streets there were no police to enforce it. It was a common, if not a universal practice. The public thoroughfares recked with filth which was positively appalling. New York enjoyed and deserted the reputation of being at one the most prosperous and the worst sowerned tet vin the word."

So that with all our modern defects the present time is not much worse than the period that preceded it.

Mortgages for the amounted to more than a million dollars, according to reports given out by the Recorder's office. This speaks well for the building business, for perhaps more mortgages are placed on record for building and development than for any other one thing. So that there seems to be a loosening up in the money market at least and a general movement toward doing something with the opening of spring. Let the good work go on. Something doing every day and we will forget about the Mexican situation and the fact that William Randolph Hearst is bursting with the Spirit of '76 and wants to offer his life and fortune on the altar of liberty.

The Present Status Of The Rights Of Municipalities On Water Extensions And Improvements.

Address by B. D. Marx Green, City Aftorney of Antioch and Pittsburgh, Before the Sixteenth Annual Convention of the League of California Municipalities Held at Venice, Calitornia, October 6-11, 1913.

Reprinted from Pacific Municipalities, February, 1914.

This topo naturally falls under three main heads

- (1) The right to compet extensions of service.
- (2) The right to compel letterment of service for Domestic Use
- (3) The right to compel betterment of service for Fire Protection Pur-

I will briefly take up each of these subjects in their proper order.

Before Section 19, Article XI of the Constitution of the State of Colifornia was amended in 1911, the relation of the municipality towards the company was comparatively simple. If the city did not own its water works, a water company had under the Constitution the right to use the public streets without obtaining a franchise from the city. The only control that the munnipality had over the company Was its right to make general regulations for damages in the learing up of the streets and its duly to by rates anmustly which was made mandatory by Section 1. Article XIV of the Constitution. After the Constitution, however, was amended in 1911, public service corporations were no longer given the constitutional right to use the public streets will-out a franchise.

The Appellate Court succinctly quotes the law in Lukrawa, et al. vs. Spring Valley Water Company 15 C. A. 10. 202 when a property of the Court of th

"It will thus be seen it it public service conjugations have no longer any logal right to use the streets of a municipality which they did not originate for the constitutional amendment of 1911 and that such corporations may now extend their service into new territory in and along the streets of a municipality only upon securing a franchise from the municipality for that purpose.

Now it is a general principal of mumerical corporation law as also stated in the Lukrawa case.

"It is a water company, committed by its cater to the nullde service, is in that bound to serve the whole public, and that when necessary to such service the company's existing mains must be gradually extended so us to keep pace with the growth of the community which the company has undertaken to serve".

But when the Constitution was amended the situation became very complex. The Lakrawi case was a petition for a writ of mandate directed auxiliast the Spining Valley Water Company in Sin Francisco to compel it to extend its mains through a portion of the city which it was not then serving

and had refused to serve. The servet there said that if the company had no right to voluntarily go into a street in which it had not had its puce before the Constitutional Amendment, no court could now compel it against its will no go into that street.

We have then this definite principle that a with company having no franchise granted by the heighdry, body of a minicipality has now no right to effect upon any street in which it had no pipes prior to October 10, 1911, the date of the indoption of the Constitutional Amendment—So mine for extensions of vixiting service.

11.

In regard to improvements of existing service, which do not comtemplate extensions into new territory, there seems to be no doubt, judging by the mission, that upon proper complaint Aled with that body a manicipality or any officer may obtain redress against a water company which is not furnishing service adequate for donostic uses water for fire protection purposes. If a pape in a street is of insufficient size bousehold use, the Rathroad Commission can order the company to just in such equipment as will adequately supply the demand. To accomplish this they cannot, however, compel the comnony to install service nine in a street not already occupied by the company They can only order the betterment and improvement of existing service

HI In regard to butterments for his profe from purposes, we have before us prelocasive and in relation to which the recent decision of the State Railroad Commission in the case of Lewis vs. Peoples Water Company has set a far-reacting precident. In order to get a clear grasp of the subject and a concrete point from which to commence at might be as well to review the state of facts brought out in that by the City Club of Berkeley, voluminous statistics were produced showing that the water compony supplying the county of Alameda maintimed in its distributing system 47% of mains of a size of two makes and under. Naturally, under such conditions, there has been for many years grave complaint relative to the quantity of water available for fire protection purposes. As a culmination, early this spring at a fire in the hilly east section of Berkeley, two houses were totally destroyed owing to tack of water with which to fight the flames. It was necessary for the fire department to pump from a six-inch main for a distance of twentyfive hundred feet and to an elevation of three hundred feet. Under such circumstances great deliv cusued, and it was impossible to obtain more than one stream of water. If the two-meli pipes negres of access to the fire had been larger in size there would have been plenty of water and slight loss. On this given statement of facts I filed a complaint with the Railread Commission, asking that an order be made requiring the detendant to install and maintain tor fire protection purposes a Sta-linch main instead of the present two-meh main. The pleadings impliedly admitted that sufficient water was unusually the protection purposes the supply was insufficient. The matter was time concretely brought before the commission.

ston. The water company being already in possession of the street, I was not asking an extension of service, but merely an improvement. By consent it was stipulated that if the improvement could be ordered, imisdiction so to do by in the Railroad Commission, There had been grave doubt about the onestion of jurisdiction as the Berkeley Tarter contained a provision that the City Council should have the right to regulate the size and location of water mains. The Public Utilities Act says that the Railroad Commission is vested with power over service equipment, cle, unless that power has been vested in the municipality under its charter or its police power. My contention is that the above section of the Berkeley Clarler is unconstitutional (and a)so the like sections of any city charter adopted before the Constitutional Amendment) and as the question did not really concern the merits of the case, both sides agreed that it should not be considered. But I wish to call the matter to your attention in passing as it is hable to arise in some

The Railroad Commission finally des cided that neither it, nor by implication any other body, has the right to order a water company to enlarge its mains for the purpose of furnishing the protection. The opinion was handed down by Commissioner Thelen and is a very well considered collection of all the authorities and covers sixteen full typewritten pages. I shall attempt to give you a very brief resume of his reasoning, and in language as untechnical as possible The crucial point, as I gather from his opinion, is that our Court of last resort has delinately decided that a water company cannot be held hable for damages for a fire caused by lack of water unless there is a specific contract between the water company and the consumer under which the water company agreed to furnish adequate fire protection; therefore, there cannot be a duty to have the water on hand if there is no Dability for breach of that duty. In the celebrated case of Niel aus Brothers Company vs. Contra Costa County Water Company, 153 Cal. 305, an action brought to recover damages against the defendant water company for an alleged breach of contract to supply water to the plain iff's premises for fire protection. Plaintiff alleged that its planing mill in West

Berkeley had been destroyed by the failure to furnish sufficient water for fire protection and recovered a large judgment in the court below. The Supreme Court reversed the judgment, on the ground that there was no contract between the parties for the simple of water for fire protection purposes sufficient to justify a recovery.

The Court first finds that there was no express contract between the par-Plaintiff then contended that an implied contract arose from the fact that plaintiff had installed fire hydrants and that under an ordinance of the city of Berkeley, 50 cents per month was payable from plaintiff to defendant for each of said laydrants. The plaintiff claimed that the ordinary relation of public distributer of water and consumer was sufficient, under the ordinance, to impose upon the defendant the obligation to supply it with water for fire protection. Referring to this point, the Court says at page 316:

"No Hability such as the plaintiff citations as were contemplated when the only relation shown is such as a proceeds from the fact that the ware company has undertaken to furnish the inhabitants of a municipative with water, has connected its mans with the premises of a consumer, and is charging ordinance rates for the water summited not to be sumplied."

Again at page 317:

"It would appear that in the nature of the situation itself no obligation, implied or otherwise, to have constantly on hand a supply of water for fire protection could arise."

The Court then continues as follows: "White it is to be presumed that the rates established by a municipal ordinance are fair and reasonable, the presumption only applies as far as such rates fix the compensation to be paid the company for furnishing water to consumers as a commodity. They are not fixed as a consideration under which the company obligates itself to furnish water for the extinguishment of fires with a corresponding habitity for failure to do so. And it from the fact that under the ordinary relation of public service cornoration and consumer that the only duty of the company is to furnish water as a commodity and not for the purpose of extinguishing fires that liability for damages for failure to supply it for the latter nurpose can only be created by express contract."

The Court then, at pige \$11, refers to the well established rule that a property owner has my jight of action against a water company under its contract with a city to supply water to public hydranis for the protection of his property, although his loss may have been occasioned by the negligent failure of the company to have on band a supply whereby the loss might have been prevented.

Continuing, the Court says at page 318;

"Applying the reasoning of these authorities to the relation between the company and the consumer here, it is apparent that from the relation no obligation to furnish water for fire protection is implied, more an it be said to exist in the absence of an express contract."

Referring to the question of the increased rates which would have to be paid if water companies assume to protect against fire, the Court says at page 310:

"In the nature of things, the compensation fixed by the minimularity inno relation to the assumption of any such flability, that compensation is lased on the expense of furnishing water simily as a commodity, labellity for destruction of premises to which the company may be required to supply water was not taken into consideration in fixing the rates, nor, we apprehend, was it even thought that any such librality could be imposed by the ordinance, or was to be assumed by the company in doing so."

Referring to the contention that a contract arose from the fact that the water company charged the mouthly ordinance rates for the hydrants installed upon plaintiff's premises, the Court rays at page 220;

"But these were not paid by reason of any contract between it (plaintiff) and the defendant. If a voluntary contract had been made between them under which a stipulated monthly sum was clarged plaintiff by defendant for connecting its mains with the hydrants of the plaintiff, it might reasonably and plausibly to argued that fire protection was contemplated as the only advantage to be derived therefrom, Here, however, there was no such contract. While the municipality has the constitutional power to fix the rates at which a water company may supply water to its inhabitants, this applies only to the establishment of rates for the supply of water as a commodity, and while it may contract with the company for general protection against fire of the property of its inhabitants and expressly contract for protection of its own municipal property, it has no authority to arbitrarily impose upon a water company liability for the destruction of property of the individual citizen on account of an inadequate water supply by simply fixing an ordinance rate for bydrants which the citizen may install upon his premises,"

The Court Can refers to the chormous Hability which a water company would be compelled to assume upon the plaintiff's theory without any consideration and concludes at page 322, that the only relation slown to exist between the plaintiff and d fendant was that the writer company engaged in distributing water for public use to a consumer who had availed himself of his legal right to have the company connect its water system with his promises for the purpose of furns'ring him with water solely at ordinance rates fixed by the Town of Betkeley, and that under these circumstances

"no liability is imposed by any statute of this State upon such public service company for failure. From whatever cause, to have a supply of water available on the premises of the consumer for use in five protection, although he may have installed ample facilities for that purpose, and no legal flability for such fathure, independent of the statute, is implied from the relation; that such flability con only be created by contract heliveen the nature under which the water company expressly assumes the liability."

As no contract was proven the plaintiff was held to have no right to maintain the action.

My contention in response to this

was that under Sections 13 (h) and 12 of the Public Utilities Act the Ractroad commission had the right to make it the duty of the water companies to supply sufficient water for fire road as follows:

icad as follows:

Soc. 12 (4). Every public utility

all furnish, provide and maintain such service, instrumentalities, equipment and facilities as shall promote the safety, health, comfort and convenience of its patrons, employees and the public, and as shall be in all restects adequate, efficient, just and reasonable."

'Sec. 42 The Commission shall have power, after a hearing had upon its own motion or upon complaint, by general or special orders, rules or regulations, or otherwise, to require every puldic utility to maintain and operate its line, plant, system, equipment, apperatus, tracks and premises in such manner as to promote and safeguard the health and safety of its employees, passengers, customers, and the public, and to this end to prescribe, among offer things, the instalkation, use, maintenance and operation of appropriate safety or other devices or appliences, including interlocking and other protective devices at grade crossings or junctions and block or other systems of signalling, to establish uniform or other standards of equipment. and to require the performance of any other act which the health or safety of its employees, passengers, customers or the public may demand."

Commissioner Thelen, however. his opinion says that he cannot find in those sections any intention to immose upon the water company a duty with reference to fire protection which did not exist before the enactment of the Public Utilities Act. He says that the effect of these sections is not to add to the duty of a water company with reference to fire protection, but tatier to declate that a water compony shall perform its full duty to the public in all respects in which it is under obligation to the public, and to state that the Railroad Commission may enforce the performance of those

I also contended that the Niehaus case was not applicable in that we did not demand that the water company by making the improvement should be unsidered the insurer of property. claimed that the company could be compelled to put in larger mains and metall hydrants and then, by order of tle Commission be made to furnish such water as was available. If sufbe tent water was not there in case of fire no liability for actual damages should test upon the company; but if it had not complied with the order of the Commission in turning water from ertain reservoirs into those pipes, t en the company would have to answer for disobeying the Commission. I'nt the Commission says that in the absence of a liability, it is difficult to find a duty, and if the company cannot under the law be held liable for damages if it does not have enough water in the pipes, then certainly neither the Commission nor any other body has the right to order it to have that water in the pipes. And yet it is very hard to reconcile the Commission's language in this case with the acts of the Comnursion in other cases where it has ordered extensions and improvements in

water service for domestic purposes. No one contends that the company is liable for damages if it fails to obey the Commission's order to install improved service for domestic uses. it must face the penalties prescribed by the Public Publics Act. Why, then, cannot an order of the Commission be made just as appropriate in cases of improvements ordered for fire protection purposes" I cannot do better in closing than to quote you verbatim the concluding portion of the order in which the Commission discusses the general aspect of the case, and the way in which it will be possible for the municipality to solve this very grave question The Commission says:

"If the conclusions herein stated are correct, we are confronted with the practical question as to how an individual is to secure adequate fire protection for a house located in outlying sections of a territory supplied by a water company, in which the size of the mains and the pressure are not sufficient to furnish adequate fire protection. In some of the cases the Courts have suggested that a loss by are may be guarded against by insurance and that the collection of the tnsurance, if a fire results, is an adequate remedy. While such remedy may seem adequate in law it will afford little comfort to a person who is compelled to stand helplessly by and see his property destroyed.

"The desired fire protection may, of cuprise, he secured by contracts with water companies on the part of municipalities and individuals, in case the water companies are willing to enter into such agreements. Such conditions as may be deemed in charters and doubtless he inserted in charters and franchises and become operative as to water utilities hereafter entering the availed of as to companies now operative aring under existing charters and existing franchises not containing the desired conditions.

"San Francisco and Oakland, and possibly other cities in this State, have, at public expense, installed auxiliary fire protection systems. It may be that other cities in California will find such a course to be a solution of the difficulty with reference to fire protection in cases in which the existing water plants do not in connection with their domestic service supply facilities and water sufficient for fire protection purposes. When a city installs a fire protection system it acts under the same theory under which it acts when it installs adequate police protection. either event it acts in pursuance of its public safety and general welfare.

Sourceship and operation of the exstring vater plants by the minicipalities wil not in and of itself provide the desired iemedy, for the reason that it has been mixes saily held that a more wants of the minicipality owning and operating its own water system is not liable in damages for destruction of property caused by the failure of the minicipality to supply adequate facilities for fire protection purposes. See Town of Pkinh ys, Pkinh Witer and Improvement Company, supra, at page 118, where a large number of authorities are cited."

How then are we going to tackle this problem? The public service corporation owes a certain duty to the municipality. Some people may say that it

would bankrupt many of the water companies to be compelled to enlarge their plant to a size sufficient to afford fire protection. My answer them is that no firm or corporation has any right to engage in the business of furnishing a public commodity to a municipality unless it has resources behind it sufficient to serve that commodity in a proper manner. If it is compelled to enlarge its plant and give better service and the municipality refuses to make each year rates adequate to pay interest on the increased investments, the utility always has the protection of the court and may throw about itself the mantle of the Federal Constitution which provides that no man's property shall be taken without the due process of law. We have reached a grate crisis which means either municipal ownership or extensions and betterments of the existing service of private corporations. My own conclusions on the subject are that proper legislation should be enacted by the next Legislature dealing specifically with this very important problem, or, if that will not offer us a remedy, then the People should solve it by Constitutional Amendment, (Applause).

PORTLAND, ORE .- Apartment house, 3 story and base, brick, \$35,000. Architects, Claussen & Claussen, Macleay Bldg., Portland. Owner, I. Holsman. The building will be erected at the corner of 21st and Overton street on property 50 by 100 feet. Interior has been arranged for a number of two and three room suites with private baths and wall beds. Interior finish will be of pine and hardwood veneer. Plans provide for steam heat, a hot water supply and vacuum cleaning system. Bath rooms will have tile wainscot and composition floors. Tile and marble will be used in the entrance. Exterior of the building will be faced with pressed brick. Plans are complete and segregated figures are now being taken.

SAN FRANCISCO-Apartment house, 7 story and base, reinforced concrete and steel, \$170,000, Architect, C. A. Meussdorffer, Humboldt Bank Bldg., S. F. Owner, A. W. Wilson. The building will be erected on Powell street north of California, covering an area of 68 feet 9 inches by 137 1/2 feet. Construction will be fireproof throughout. The architect has provided for a sevenstory, basement and sub-basement building covering the entire lot and containing fifteen apartments, ar-ranged as follows: Two apartmets of five rooms and bath and one apartment of seven rooms and bath on the first floor, and two apartments of eight rooms and three baths each on each of the six unner floors. Each apartment will be provided with the most modern appliances, including open fire places, dressing tables, steam heat, hardwood floors, service elevators, vacuum cleaning system, etc. A feature of these apartments will be that the main living and dining rooms will be located in the rear of the building to give the tenants an unobstructed view of the bay and Alameda an Marin shores, the main sleeping rooms being in the Falrmont front and overlooking the gardens. Annexed to the dining room in each apartment there will be an open air dining norch which will be connected by means of glass doors. The exterior of the building will be designed in Erench renaissance, with iron balconies at the windows and across the entire top floor, a feature familier to all Parisian apartment dwellings. Over the main entrance will be an ornate hammered iron and copper marquise, giving approach to a Caen stone vestibule and lobby. The lobby will be finished in mahogany, with art glas ceiling lights and marble wainscot. The sultes above are designed for interior decoration French renaisance finished in combination of white china gloss and mabogany. The bath rooms are to bave recesed tubs set in tile floors and walls, with automatic showers, and wails, with automatic showers, and pedestal lavatories. Doors are arranged in groups of three to form dressing mirrors. The kitchen will have patent coolers and a system of ventilation operated by an exhaust fan, so that no odors can escape into the building. Space has been provided for thirty servants' rooms and chanffeurs' rooms in the basement, in addition to the servants' rooms within the apartments. The main passenger elevator will be operated from the subbasement to the roof. In the subbasement will be a large garage for the storage of automobiles belonging to tenants. This garage is reached by means of a direct entrance from the street, which also connects directly with the elevator. Opening directly from this automobile entrance is a spacious ballroom. Contracts will be awarded shortly.

SAN FRANCISCO-Apartment house, 6 story and base, brick and steel, \$78,-000, Architects, Dunn & Kearns, Monadnock Bldg., S. F. Owner, T. J. Young. The building will be erected on the north side of Pine street west of Leavenworth, covering an area of 50 by 137 1/2 feet. The plans show the building to be arranged for six fourroom apartments on each floor, but, by ingenious planning for fireproof sliding doors in decorative panels properly deafened, each of the small apartments can be changed at will from four rooms up to a large apartment of eight rooms, so that a selective grouping of all spaces may be obtained. All the apartments will have a large living room en suite, with the dining room and entrance foyer done in soft French gray tones, with mahogany doors. are arranged with large chambers dressing closets, pler mirrors, etc. The baths are to have recess tubs, with automatic mixing showers and concealed supplies, pedestal lavatories and flushometer toilets. The kitchens are all to be done in white tile, with fixtures in cabinets, while enameled iron coolers, ice boxes, garbage incinerators and electric dumb waiters will afford the most modern service. A drip sys tem of steam heating, with an oilburning plant, is to be installed. radiators are to be of the "direct Indirect" style set in recesses of the walls, drawing air from the outside through ornamental brass screens set in the panels in the wainscoting. The main rooms in general are to be bung in tap-estry paper in panels, with all the woodwork painted in French gray. The larger apartments that are leased will be designed in different styles as desired by the lessees. The dining rooms will be wainscoted in oak to the richly ornamented ceilings in the Elizabethan style. The foyers, reception and living rooms are to be designed in the different periods ranging from early English Adam and Georgian or colonial to the various Louis. All the chambers are to be finished in French grays in Louis Sixteenth styles, with chintz bangings. An elevator will be installed running from the basement to the roof, where a solarium with a glass roof and sides with maple floor will be built. The exterior is to be in the Spanish renaissance style, with an enriched base of polychromatic terra cotta. The walls above are to be of cement, with enameled surface. On the sixth floor is an open loggia, with a projecting balcony of wrought iron. The back wall of the loggia is to be tinted in a deep crimson color, relieved by the light green of the iron work and ornamental palms in porcelain vases. A heavy projecting counce of metal completes the scheme. then street courts facing the south in which the fire escapes are placed will give sun and air to the interior apart-Work will be undertaken as soon as leases and contracts are signed.

APARTMENT HOUSE-7 story and hase, reinforced concrete and steel, \$170,000, San Francisco, Architect, C. Meussdorffer, Humboldt Bank Bldg , S F. Owner, A. W. Wilson The building will be erected on Powell street north of California, covering an area of 68 feet 9 inches by 137% feet. Construction will be fireproof throughout. The architect has provided for a sevenstory, basement and sub-basement building covering the entire lot and containing fifteen apartments, arranged as follows: Two apartments of five rooms and bath and one apartment of seven rooms and bath on the first floor, and two apartments of eight rooms and three baths each on each of the six upper floors. Each apartment will be provided with the most modern appliances, including open fire places dressing tables, steam heat, hardwood floors, service elevators, vacuum clean-

tim etc. A feature of apartments will be that the main living and dining rooms will be located in the year of the building to give the tenants an unobstructed view of the buy and Alameda an Marin shores, the main sleeping rooms being in the front and overlooking the Fairmont gardens. Annexed to the dining room in each apartment, there will be an open an dining porch which will be connested by means of glass doors. The exterior of the building will be designed in French renaissance, with from balconies at the windows and across the entire top floor, a feature famillior to all Parisian apartment dwellings. Over the main entrance will be an ornate hammered from and copper marquise, giving approach to a Caen stone vestibule and lobby. The lobby will be finished in mahogany with art glass ceiling lights and marble wainsent. The suites above are designed for interior decoration in French renaissance finished in combination white china gloss and mahogany. The bath rooms are to have recessed tubs set in tile floors and walls, with automatic showers, and pedestal lavatoties. Doors are arranged in groups of tures to form dressing mirrors. The kitchen will have patent coolers and a system of ventilation operated by an exhaust fan, so that no odors can escape into the building. Space has been provided for thirty servants' rooms and chauffeurs' rooms in the basement, in addition to the servants' rooms within the apartments. The main passenger elevator will be operated from the sub-basement to the roof. In the sub-basement will be a large garage for the storage of automobiles belonging to tenants. This garage is reached by means of a direct entrance from the street, which also connects directly with the eleva-- Opening directly from this automobile entrance and from the elevator is a spacious ballroom. Contracts will be awarded shortly.

APARTMENT HOUSE-6 story and base, brick and steel, \$78,000. San Francisco. Architects, Dunn & Kearns, Monadnock Bldg., S. F. Owner, T. J. Young The building will be erected on the north side of Plue street west of Leavenworth, covering an area of 50 by 1374g feet. The plans show the building to be arranged for six fourroom apartments on each floor, but, by ingenious planning for fireproof sllding doors in decorative panels properly deafened, each of the small apartments can be changed at will from four rooms upto a large apartment of eight rooms, so that a selective grouping of all spaces may be obtained. All the apartments will have a large living room en suite, with the dining room and entrance fover done in soft French gray tones, with mahogany doors. The chambers are arranged with large dressing closets, pier mirrors, etc. The baths are to have recess tubs, with automatic mixing showers and concealed supplies, pedestal lavatories and flushometer toilets. The kitchens are all to be done in white tile, with fixtures in cabinets, while enameled iron coolets ice hoxes garbage incinerators and electric dumb waiters will afford the most modern service. A drip system of steam heating, with an oilburning plant is to be Installed. All

717 KnudsenKnudsen

radiators are to be of the 'direct indirect" style set in recesses of the walls, drawing hir from the outside through ornamental brass screens set in the panels of the wainscoting. The main rooms in general sie to be bung in tapestry paper in panels, with all the wondwork pointed in Frence gray. The larger apartments that me to leased will be designed in different styles as desired by the lessers. dining rooms will be wainscoted in eak to the rickly ornamented ceilings in the Elizabethan style. The foyers, reception and living rooms are to be designed in the different periods ranging from early English Adam and Georgian or colonial to the various Louis. All the chambers are to be finished in Firmle Glave in Louis Sixteenth styles, with chintz hangings An elevator will be installed running from the basement to the loof, where a solarium with a glass roof and sides with maple floor will be built. The exterior is to be in the Spanish renaissame style, with an enriched base polychromatic terra cotta. The walls above are to be of cement, with enameled surface. On the sixth floor is an open loggia, with a projecting halcony of wrought from The back wall of the loggia is to be tinted in a deep crimson color, relieved by light green of the iron work and ornamental palms in morcelain vases. A heavy projecting confice of metal completes the scheme. Open street courts facing the south in which the fire escapes are to be placed will give sun and air to the interior apartments. Work will be undertaken as soon as leases and contracts are signed.

GARAGE-1 story and base, brick and steel, \$14,500. Son Francisco, Ar-chitect, J. R. Miller, Lok Bldg., S. F. Owners, San Christino Investment Co The building has been designed for a commercial garage and will be erected on the south side of Clay street west of Polk covering an area of 68 feet by 127 feet. There will be a cement floor, steel roof trusses and metal window sash and frames. Interior finish will be of pine. There will be modern plumbing fixtures, special gasoline storage tanks and special electric work. Patent store fronts will be installed. Besides the storage space plans provide for a machine shop and office. Exterior of the building will be faced with pressed brick. Plans are complete and figures are being taken.

STORES AND LOFTS—2 story and base, frame rost not stated. So hase, frame rost not stated. So Francisco. Architect. none. Owner, Cobries Katz, 1900 holdones street, building will be erected on the east side of Mission street south of 17th. There will be two stores and light lofts above. Interior finish will be of pine throughout. Patent store fronts and plate glass windows will be used, exterior of the building will be covered with shiplap. Plans are complete and in the hands of the owner who will do the work by Day Lallow.

MARIN, CONTRA COSTA AND SONOMA COUNTIES.

HOSPITAL BOLLER.—Cost not stated, Napa, Napa Co., Cal. Engineer, State Department of Engineering, Sacramento, Owners, State of California, Bids opened for the insulalation of a 250-H. P. boller in the State Hospital at Napa show Doward Engineering Co. low at \$4.240. A complete list of bids submitted will be found under the heading of Marin, Contra Costa and Sonoma Counties in this issue.

HOTEL-4 story and base, brick and steel, \$65,000. Mirtinez, Contra Costa Co., Cal Architect, Walter King, Elks' Bldg., Stockton. Owners, Martinez capital represented by W. J. Curtis. The building will be erected on a promment corner and will be arranged with stores, hotel lobby and public dining room on the first floor. Upper noors will contain in the neighborhood of 20 guest rooms and a number of batas. Plans provide for steam heat oil hurning furnace, hot water supply and vacuum cleaning. There will be patent store fronts. Interior will be finished in pine throughout. Exterior of the building will be faced with pressed brick. Only preliminary plans have been prepared and the project depends on the amount of capital that can be interested.

INCINERATURE—Cost not stated. San Rafael, Marin Co., Cal. Architect. Thomas O'Connor, 104 D street. San Rafael. Owners, City of San Rafael. Preliminary plans are now being prepared for a modern uncurerator to be erected at San Rafael. The matter has been investigated by the City Council and final approval will be given the plans as soon as they are complete. Further mention will be made of the work.

Bids For Boiler At Napa State Hospital.

Four Sets of Figures Received for Installation of Boller at Napa Hosnital Building.

GPy Special Whre)
SACRAMENTO, Cal., March 10, 1944
Eds were opened at the Tuesday meeting of the State Board of Control for formishing and installing a 250-h, p steam boiler, together with oil burning furnace, valves and plone at the State Hospital at Napa. The Doward Eng. Co, submitted the lowest hid at \$4,240, Other figures submitted were as follows:

FRESNO, MODESTO, STANIS-LAUS AND CENTRAL CALIFORNIA.

SCHOOL-1 story and base, brick, Cost not stated. Del Rey, Fresno Co., Cal. Architect, J. Carl Thayer, Fresno. Owners, Del Rey School District. building has been designed for a fourroom school and has been designed in the Mission style. Interior finish will be of nine with maple floors in the class rooms. Plans provide for a central heating system with oil-burning furnace There will be modern school plumbing and electric work. Exterior of the building will be faced with either cement plaster or pressed brock. this question has not been fully determined by the trustees. A clay tile roof will be used. Plans are nearly complete and figures will be called for shortly.

SCHOOL-2 story and base, forced concrete, Cost not stated, Chico, Butte Co., Cal. Architect, A. J. Bryan. Chico, Owners, Oakdale High School District A report from the Chico papers states that the Board of School Trustees of the Oakdale School District at Chico will select the plans presented by Architect A J. Bryan Chico for the new \$50,000 school building. These plans provide for a twostory structure approximately 125 by 100 feet and containing eight class rooms, domestic and manual training departments and an auditorium seating The report states that 600 people. while official action has not been taken that all trustees favor these plans.

San Francisco Architectural Students Win Honors Abroad.

Word has been received by the San Francisco Architectural Club of the success of one of their members, Edward L. Frick, in his entrance examinutions to the Ecole des Reaux Arts in Paris. In the examinations on Architectural Design, he received a mark of 17 with 20 as perfect. This mark placed him first in a class of 700 applicants of all nations and is the laghest mark which has been given in this examination at the Beaux Arts in 5 years. Mr. Frick received his early training in design in the Atelier of the San Francisco Architectural Club, under the patronage of Arthur Brown, dr. a former student at the French School. Mr. Frick, while in the Atelier of the S. F. A. C., won a thousand dollar scholarship given by the Architestural League of the Pacific Coast Pefore leaving for Paris last September, Mr. Frick was connected with the brm of Bakewell & Brown, architects for the new City Hall.

The Club is also elated over the sucees of another of its members in the Paris Prize Competition among students of the United States. Mr. Ernest Write was placed fifth in the First

Preliminary of the above competition, out of all competitors in the United States. This makes him eligible to the Second Preliminary and it is hoped by his friends and patron Mr Arthur brown, in that he will be selected as one of the five to compete in the Final Competition the winner of which receives \$250 quarterly for two and a talf years, to be spent in study in France.

PERCY R. STUART JOINS THE EDW. L. SOLLE COMPANY.

Mr. Peres, P. Stoort, who for the last (welve years, has been Pacific Coast Manager for The Roebling Construc-tion Co., is now associated with the Edw. L. Soule Co., 916-18-20 Righto

Bldg. Smart is intimately acquainted Mi with the various types of building construction and building materials and our readers are solicited to give him an opportunity to submit information and prices regarding your requirements. The company also aunounces that they are equipped to furnish and place reinforcing material to suit all requirements as they now handle Twitsed Bars, "Unit Lectangle" Fabric Unit Spirals, Unit Frames, Furring Channels and Clies

STATE INSURANCE AN EXPENSIVE LIXURY.

Wants Washington Accidents Reduced.

Governor Lister has instructed the Washington Industrial Insurance Commission, which administers the so-called State insurance act to cooperate with the State labor commissioner in devising plans for reducing industrial accidents. Accidents in the industries of Washington have shown sharp increases since the State in-surance law to one effective, either because of the employers' muliference to safeguards, knowing they would be taxed to sustain the State insurince monopoly, or the catelessness of emploves now they are certain of com-pensation. Six ambred and fifty Washington workmen have been killed and twenty-live thousand injured in tile State's industries during the past two years, according to J. H. Wallace of the industrial insurance commission.

PANAMA-PACIFIC EXPOSITION NOTES

A cablegiam received in San Franchen March J. from London announced that the House of Commons by a substanted majority put on record a desire that the Government re-consider its refusal to participate officially in tle Panama-Pacific International Exposition and agree to participate.

Tennessee Atkansas and Texas now have decided to participate in the Panama-Pacific International Exposition according to telegraphic advices received March 2 Commisioners to select sites tor Arkansas and Texas will arrive in San Francisco within 60 days.

Samuel G. Buckbee of San Francisco has been authorized by Tennessee to select that state's site and he has been notified that \$50,000 has been guaranteed for the Tennessee exhibit. Buckbee has received a telegram from R. S. Faxon, chairman of the Tennessee Commission, requesting lum to choose the hest site available

The construction of a decorative parapet along the shoreline of the Esplanade of the Marina at the exposition grounds is under way. The Esplanade will be an artistically decorated promenade skirting the water's edge and the parapet will serve the double purpose of a bulkhead and a decorative feature. This parapet will be 3,000 feet long and three feet high. It will be ornamented with pedestales and illuminated in a novel manner.

CHARLES WRIGHT ELECTED PRESI-DENT OF THE GENERAL CON-TRACTORS' ASSOCIATION

The recently elected Board of Durectors of the General Contractors' Association have elected Mr. Charles Wright to serve as President of the Association for the ensuing year.

Mr Wright is well and favorably known to the building fraternity of this city and is a man who is highly respected by all who know him. As President of the General Contractors Association, he will undoubtedly till his important position with credit to the Association.

Mr. A. H. Bergstrom was re-elected Vice-President of the Association and declined to accept a nomination for President, owing to press of private lusiness

Mr. Chas W. Gompertz, the retiring President, has been elected Treasurer for the ensuing year.

With these officers, backed by a strong Board of Directors, the Association will undoubtedly continue to progress as in the past.

On Siturday, March 21st, the Annual Panquet of the Association is to be held at the St. Germain Restourant and a large number of the membership are expected to be present to help in moking the occasion an event of importance and a boost for the building incustry.

CALIFORNIA HIGHWAY COMMISSION BULLIETIN.

The Supreme Court decision of February 24, sustaining the motor vehicle act, releases money for State highway maintenance which had been tied up during the fight on the constitution ility of the law. As the art was the only source of funds for maintenance of the State highway the Highway Commission was entirely without money for maintaining the road already constructed. In spite of the severe demands through abnormal conditions of the present winter, the highway engineer's force was able to keep up the highway without material loss.

Now that maintenance funds made available the plans submitted to the Highway Commission sometime age by Highway Engineer Fletcher providing for maintenance made effective. These include These include organization of a veritable "flying squadron for maintenance of the 2700 miles of State highway on which work is now under way. By use of the motor truck the amount of territory covered by one maintenance outfit is greatly widened

and quick repair work in case of floods will be possible. The maintenance plans as developed by Highway Enmaintenance gineer Fletcher and approved by the Commission are especially adapted to the widely varying conditions of Califorma highways.

The State has been laid out in seven divisions for maintenance purposes by the highway engineer, and in each of these divisions there will be installed a complete repair outfit costing profi-ably about \$20,000. The major portion of the expense will be for motor spraying outfits for making surface applications of bitumen. These will be heavy duty trucks carrying huge tanks for California asphaltic oil, while smaller trucks will distribute sand or screen-It is estimated that the crews with these will make as high as fifty notes in a day.

Building Construction Since Fire.

Totals Nearing \$250,000,000 Mark.

Figures, as compiled by the Bureau of Building Inspection of the Board of Public Works, for building construction since May, 1906, to February 28, 1914, show that 49,164 permits were issued amounting to \$247,098,203. The following is a list of figures as compiled by the Bureau;

	No. of	
Chass	Bld	gs. Amount
"A"	167	\$ 33,072,954

Totals	49,161	\$217,098,203

WORLD'S POPULATION,

ANTWERP, Mar. 3 .- The population of the earth is slightly over 1,900,000,-000, an increise of 140,000,000 in the part four years, according to the Bureau of Universal Statistics, which Las just announced its figures for 1913. Asia now has 933 000 000; Emone 484 -000,000, Africa, 188,000,000; America, 187,000,000; Oceanica, 57,000,000.

The world's commerce now amounts lo \$10,600,000,000, and it is carried on by 55,802 sailing ships and 17,714 steamers. Other figures show a total of 625,-000 miles of railroads, or enough to guidle the globe twenty-five times,

A debt of \$12,960,000,000 is the total stown in the accounts of all the nations of the world

Richmond has unique idea in planning to erect a three-story concrete small factories. A sort of factory tenement house, so to speak. The bay city with the inner harbor and the tailroad and pipe line terminal is certainly alive. And the activity eviover there might well be copied with profit by the business men of the City of San Francisco.

Boxes \$2.50 per year and upwards.

Juuction Market, Mason and Turk Streets

OTH THE OWNER and the Architect are particularly interested in all kinds of building materials, power and heating systems, building specialties, every accessory that goes into their project. Every issue of the Building and Industrial News contains hundreds of new building and construction reports giving the names and addresses of both the owner and the architects. Both the owner and architect receives a copy of the Building and Industrial News containing mention of their individual job conspicuously marked. Thus the builder and the architect have in their hands not only the news items of their particular project, but also the announcements and the advertisements of energetic business men who have goods to sell that are necessary to construct and equip the undertaking. IS YOUR ADVERTISEMENT AMONG THESE?

Catarrh Can Be Relieved

THERE IS NO NEED for you to continually suffer from Catarh and Cold in the Head. It makes you miserable, doesn't it? You really don't care whether things go right or not and you wooder when you'll ever get over it. And you will not get over it until you get the Clover Leaf Catarh Remedy, and use it. it will relieve you, and you'll wonder why you had not used it conner. We are so positive that this will relieve you of your Catarh or Cold in the Head, that we guarantee you satisfaction or we will refund your money.

Price 50 Cents

Editorial Comment.

Building for the month of February was comparatively quiet throughout the country. At that it was about an even break with February, 1913, the grand total from about 88 cities throughout the country made to the American Contractor, Chicago, varying less than \$100,000 in amount. This is a pretty good record and everything considered the Western cities have generally faired better than the Eastern. The following table shows the record of the respective building centers:

March ought to show a substantial gain over February. Money is getting easier and there ought to be a general loosening up of business. The time is ripe for a revival and it ought to begin with the opening of Spring.

Newspaper reports state that the cantaloupe crop in the Imperial Valley was saved from frost this year by putting paper drinking cups over the growing plants when they were quite young. As the melons were planted quite early in order to get the first fruits of the market the means for saving the earliest growth was ingenious and effective.

Now the prospect is that the valley will ship out 5000 carloads of the melons this season. This is a big return. And it is another example of the great productiveness of the California vallevs and particularly of such valleys as the Imperial. That valley is practically a reclaimed district. And its wonderful productiveness is due to the fact that it is practically a river deposit that has been reclaimed by confining the California River to its proper hounds. Five thousand carloads of cantaloupes means 100 trains of 50 cars each, and a car load of melons is a good many in itself,

New features for the exposition are being mentioned all the time in press. Among these are the effects that are to be produced by artificial lighting. This science and mechanical art is being improved and advanced all the time. As the properties of light under given conditions are better understood and the mode of producing it mechanically more wonders are wrought by this means than were dreamed of two decades ago.

It is planned to even make use of the fogs and clouds that will be above the exposition grounds at night to redect the many colored lights from them. One of the great features of the exposition will be the lighting of the planes and domes and the night effect produced by the great mechanical contrivances.

Water Proofing Problems

An Address by Mr. Louis C. Mauer at the Meeting of the San Francisco Chapter A. L. A.

Mr President and members of the Local Chapter American Institute of Architects.

The problem assigned to me this evening, namely, to speak on water proofing before your representative body, is a task that should perhaps be handled by one more competent than myself But this being a subject in which I specialize and by practice and research work endeavor to overcome and thereby solve some of the more or less difficult problems that are daily encountered by most of you in your varied tasks to give your clients for whom you design and erect buildings, results in this particular branch of work With your kind indulgence I want to tell you of water proofing buildings as I see it.

There are two factors and two factors only that are uppermost in every particular feature and branch of work employed in the erection of buildings, be it a material only, or more frequent by a combination of material and labor.

The first factor is results by for the most important, particularly to you gentlemen upon whom rests the responsibility to obtain results for your clients, on this factor alone your service is judged. To enable you to give these results it is necessary for each man entiusted with your work to give in return conscentious service and results in each particular branch of work.

The second factor is also an important one—Cost, only too often it is looked upon by your clients as the most important, hence the consequence, results are waived, which as a rule limplies cost threefold soon thereafter. This is forcefully emphasized in the water proofing branch by the recent neavy windstorms and rainfall, and fully demonstrates the necessity of particular attention being given this subject, Water Proofing.

The problem that interests all of you is, how to obtain absolute results at the minimum cost. This applies to water proofing both under and above ground

Underground work being as a rule subjected to water pressure either by seepages, springs or direct pressure, where I isements are below tide or streams. Work of this character requires distinctly different methods of treatments than buildings above ground, it must continuously withstand and endure the resistance of more or less severe water pressure.

Walls above ground are not subject to constant water pressure, therefore require a treatment to be water repellant, to be more precise, prevent the absorption of water

There are four distinct methods omployed to accomplish water proofing results.

First: By density of the materials from which your walls are constructed, density of the material itself or aggregates of which it is composed.

Second: By the membrane system. This method is used principally for underground work, for floors it is placed

between concrete slabs, or on the outside of walls where the water pressure is against the wall.

Third: By a surface coating of asphaltum, tar, or any oil base material, these being water repellant. Results are obtained by a surface coating, this is only efficient so long as the material applied remains intact.

Fourth: By non-absorption, in other words the elimination of enpilling nitraction. The material I have found to accomplish this result is a chemical solution, a water base material that combe readily used, to mix in the aggregates of coment plaster for underground work subjected to water pressure or by surface application above ground penetrating the substance, becoming a past thereof and not leave any surface conting.

The First Method—Density. You are all aware that the aggregates of a concrete mass of cement mixture can be proportioned in such a manner so as to obtain a density that will not permit the perceitation of water, but to obtain this result in a concrete wall or plaster surface would incur a task that would not be practical for ordinary construction, nor would this method apply to any brick wall, as they are all more or less porous and obsorptive, permitting percolation of water freely. Even in all mortar joints you will find this weakness.

The Second Method-Membrane System-is one that is very successfully To use this method for floor used work it is necessary to place a concrete slab, then the membrane system composed of asphaltum and felt in such number of layers as deemed necessary then the additional slab of concrete The upper slab necessarily must be of sufficient strength to withstand the hydrostatic pressure. The actual cost of this method is the felt and asphaltum membrane, plus the cost of the lower slab of concrete. The membrane being composed of an absolute foreign material to the concrete does not become a component part of either slub of concrete-in fact, separates them entirely, the only bond between the two slabs being the cohesion of the asphalt itself.

Although it is claimed that a memlicane system of water proofing is to a certain extent elastic, still, it is frequently found that breaks occur when the concrete slais develop contraction cracks, thereby impairing the results of water proofing efficiency.

The membrane system is also used on the exterior of walls. This requires the necessary excavation to give room for applying the membrane. The cost of this work is the membrane plus the cost of excavation and back filling same, and in many cases a protection wall If for any reason a membrane system could not be applied on the outside, and same would be adonted on the inside of walls, it would be news say to construct a special wall to hold same in place, otherwise if the water would percolate through the outer walls it would press away the membrane. The cost of this work would be the cost of membrane plus cost of wall to hold same in place.

If for any reason breaks should occur in the membrane system permitting water penetrating the membrane, it would not necessarily mean that the break is where it shows on the surface as the water may travel some distance between the membrane and the upper layer of concrete before finding the weakest point to the surface.

The Third Method—Surface Conting, is a method used quite extensively for treating walls above ground, and to a certain extent for underground work as well.

By applying a good surface coating of asphaltum, tar or any oil-base material where the water pressure presses the coating against the wall, good results will be obtained so long as the life of the asphaltum or oil is tained in the coating. As a rule the oils are quickly absorbed when applied to any absorptive surface, leaving the solids of the coating as a more or less mert substance with its binder. In fact, its principal element of life separated. To avoid this it is a very important factor to have a foundation that will prevent the separation of oils and solids contained in the surface coating. and at the same time obviate the disasterous chemical action of cement and brick surfaces on all oil paints.

To apply a surface coating on the inside of walls under plastering, the so-termed damp proofing or plaster bond coat, is, in my opinion an absolute waste of the expense incurred. This applies to all material without exception Whenever a wall is thoroughly saturated with water from the outside up to the point of the damp proofing coat, there is no material, be it ever so elastic, solid or efficient that will withstand the pressure. As a matter of fact it must then withstand a direct water pressure instead of being only a water repellant at Intermittent intervales.

The Fourth Method-Non-absorption, in other words, the elimination of capillary attraction. Under this method and by using the materials referred to I have accomplished results on those problems that have come under my ditect supervision both underground where subjected to severe water pressure, and treating buildings above ground by surface application. This material is a chemical solution (water base contains no oils), penetrates any absorbant substance and becomes a part thereof, accomplishing the water proofing results, not by the filling of voids or a surface coating but by making the substance to which applied non-absorptive and impervious to

If you will carefully analyze the fact you will find even a very porous material containing a large percentage of voids will not become saturated with water unless it is absorptive, nor will you find that water will follow fine cracks in any surface, unless the substance itself has suction and absorbs water. Now then, this being a fact, the method of water proofing by having the aggregates of the material made non-absorptive to resist water pressure or the elioination of capitary attraction, for all surfaces where exposed to water absorption at intermittent intervals, is one that will solve many of your difficulties pertaining to water proofing problems.

Let us first consider its application for work below ground. In basements we accomplish results by the most direct and simple means. The plastering of the walls on the inside with water proof morter and the floors with water proof topping, thereby saving the expense of exterior excavation and cribing, which would be necessary in order to apply a membrane or surface coating to the outside.

On new work where the walls are green and bonding of plaster certain, no greater expense is involved than the nominal cost of water proofing material, which is to be added to the sam and cement for plastering and topping.

But in old basements or any surface not permitting a perfect bond, quite a different problem presents itself. Here the surface to be plastered must be carefully prepared to insure proper bonding of plaster by roughening the surface. We all know the weakest point is the angle between the floor and wall, particular care must be taken to reinforce this point by forming a cove, making the connection between the floor topping and wall plaster confluous.

Should the argument be advanced that floors or walls so water proofs are liable to crack thereby cousing eleaks, let me say that the chances are very slight indeed if the walls are properly designed and constructed not the loors thick enough to resist the hydrostatic pressure.

Walls and floors that crack, due to contraction or expansion or other causes, will sever or open up a membrane almost as quickly as a plaster coating and what is the result? With the membrane it is virtually impossible to repair, unless a heavy expense is incurred, owing to the fact that the break in the membrane may be many feet from the point where the leakage shows on the surface. While your water proof plaster coating is repaired at a very small expense. The leakage always exists where it shows on the surface. The cracks could easily be cut out to a certain depth and pointed up, making same absolutely water tight.

Many basements in our city, presenting all sorts of conditions from seepage of ground water to tide pressure, have been successfully water proofed with this method.

Time does not permit going into this subject to such an extent as it might justify, but permit me to say, I would not hesitate to undertake to make absolutely dry any basement under the most severe water pressure, by plastering same on the inside and using this material as part of the water gauging the cement and send mortar. This mortar can be applied even while the water is percolating through the wall.

If necessary the mortar could be held in place with boards pressed against the wall. This might develop small

holes permitting the water to escape but which could easily be plugged up after the other portions are thoroughly set.

Cement mortar applied on walls saturated with water will gradually dry out even with the water pressure against the wall.

No doubt this question will come to your mind, will the use of this material used in the aggregates of cement mortars be detrimental to its strength or cause additional labor in its use In answer to this, I wish to state, the use of this material is a decided advantage, the initial set is somewhat retarded but in thirty-six or forty hours you will find the cement mortar much harder and stronger, this in comparison with equally proportioned cement mortar gauged with water alone The working of cement mortar is also made much easier and smoother, the action being similar as obtained by the use of lime putty in cement mortar.

For treating a building above-ground, the result can be obtained by a thorough surface application, by either brush or spray, preferably the latter, by this I mean, every particle of the wall must be saturated. This application will leave no surface coating and will not change the color or texture of any surface to which applied be it a white sand or lime stone or a red brick. A surface application will give results and become effective when applied on an absorptive material.

Take for instance a porous brick, it requires ever little effort to obtain penetration with this material of "§ or even ½" and to this depth water proof results would be found, permitting you to remove a part of the surface and texture of the brick without destroying the water proofing efficiency.

The method employed for treating walls that require a change of color is this, water proof as above mentioned, then apply any concrete paint for color effect only. By treating the walls with this material you have the most perfect foundation for any oil bare material. The surface made non-absorptive prevents the absorption of the oils in your paint pigments, this, as you all know, is the life of any oil paint.

At this time I wish to call your particular attention to a very important factor in dealing with water proofing problems. Carcless workmanship by the individual mechanic, the economical use of the material contrary to directions and requirements, and some times also the back of knowledge of these special problems of those in charge of the work.

In conclusion, I wish to say that the past three months have developed the most interesting water proofing problems, and many have presented themselves for my personal inspection and observation, and if there are any special features or problems that any or you gentlemen may have in mind wherein my past experience can be of any service to you, kindly consider me at your command. I thank you.

Firms desiring news on special classes of buildings, such as Beaks, retrieves, Schnols, Hotels, etc., will find such Rems nil classified and grouped under proper headings, commencing on this page. These sems liems are again repeated under "LOCALATIES" in the last part of our sews department.

APARTMENT HOUSES.

SAN FRANCISCO-Apartment house. 3 story and base, frame, \$15,000. Atchitect. M Mattanovich, David Hewes Owner, Mr. Hadler. The Bldg., S. F. building will be erected on Mission street between 16th and 17th streets and has been designed to contain nine apartments of three and four rooms Interiors will be finished in pine and redwood with some elm panels. There will be steam beat, a hot water supply and patent store fronts. All suites will have private baths and wall beds Bath rooms will have tile wainscot and composition floors. Exterior of the building will be covered with cement plaster on metal lath. Plans are complete and figures are being taken

SAN FRANCISCO-Apartment house alterations, 3 story, frame, \$6,000, Architect, Arthur J. Laib, Russ Bldg , S Owner, Miss McGough, 1256 Page street. The work will consist of altering the two lower flats of a three-story building into four modern apartments. The basement of the building will be altered to contain a store. Third floor will be arranged for one flot. New interior finish, oak floors, modern plumbing, electric work and painting will be required. Exterior of the building will also be altered Plans are complete and figures are being taken.

OAKLAND, CAL.—Apartment bouse, 3 story and base, frame, \$30,000 Architect, Joseph Caben, 15 Kearny street, S. F. Owner's name withheld. The building will be erected at the corner of Perkins and Grand streets. and will cover a large area. Interior will be arranged for a number of two, three and four room suites. Interior finish will be of pine and hardwood veneer. Some oak floors will be used, Plans provide for steam heat, a hot water system and portable vacuum cleaners. Bath rooms will have tile wainscot and composition floors. A 11 suites will be equipped with wall beds, Entrance will be finished in marble. Exterior of the building will be covered with cement plaster on metal lath. Plans are complete and figures are being taken.

RICHMOND, CONTRA CONTA CO., CMA—Apartment house alterations, 3 story, trame, \$6,000. Architect. W. H. Ratcliff, Jr., First National Bank Bldg., Eerkeley, Owner's name withheld. The huilding to be altered, is now being used as a hospital. Included in the work will be new Interior partitions, interior finish, plumbing, painting, electric work and plastering. Exterior of the huilding will be covered with a new coat of cement plaster on metal lath. Plans are being prepared.

SAN FRANCISCO—Apartment bouse a story and hase, brick and steel, \$80, 1000. Architects, Dunn & Kearns Monodnock Bldg., S. F. Owner's nome withled. The building will be creeted on the south side of O'Farrell street hetween Larkin and Polk streets, and will laye a frontage of 60 feet by 3

depth of 120 feet. There will be a total of 128 rooms arranged in suites of two and three rooms. Plans provide for steam heat, elevator service. hot water supply, vacuum cleaning and wall beds. All suites will have private baths. Interlor finish will be of pine, redwood and hardwood. Bath rooms will have composition floors and tile wainscot. Exterior of the building will be faced with pressed brick. Plans are complete and figures are being

SAN FRANCISCO-Apartment house alterations, 3 story, frame, \$7,500, Architect, Charles J. Rousseau, 46 Kearny street, S F. Owner's name withheld. This work will consist of altering a three-story flat building into six modern four-room apartments. Steam heat, wall beds, plumbing, electric work plastering, painting and millwork will be required. Exterior of the building will be covered with cement plaster on metal lath. Plans are complete and figures are being taken.

Contracts Awarded.
LOS ANGELES, CAL. — Apartment
house, 4 story and base, brick and steel, \$50,000. Architect, none. Owner, A S O'Neil, Lankershim Bldg., I. Contractor, W. E. Stradley, Ruilders' Exchange, L A. Contract price,

BRIDGES AND DAMS.

SAN FRANCISCO-Furnishing ment, Cost not stated. Engineer, Assistant State Engineer, Ferry Bldg., S. F. Owners, State of California. Bids have been called for on 50,000 barrels of cement which is to be delivered to the State Board of Harbor Commissioners, f o, b, cars of the Belt Line Railroad at San Francisco. Blds will be opened on April 2nd Specifications and full particulars can be secured from the Secretary's office of the State Board of Harbor Commissioners. An official proposal appears in another

column of this issue.

KINNAMAN, ORE.—Bridge, steel or reinforced concrete Cost not stated. Engineer, County Surveyor, Tillamook Owners, Tillamook County. Plans are complete and figures are being taken for a steel or reinforced concrete bridge to be constructed over the West Beaver Creek near Kinnaman. There will be one 50-foot span. Plans and specifications can be secured from the County Clerk, J. C. Holden, at Tilla-Bids will be opened on March mook. 27th.

Contracts Awarded.

SAN FRANCISCO-Ferry slip, timber onstruction, \$110,600, Engineer, Assistant State Engineer Jerome Newman, Ferry Bldg., S. F. Owners, State of California. Contractors, Healy-Tibbitts Construction Co., S. F. Contract price \$110 600. A complete list of all figures received for this work will be found under the heading of San Francisco in this issue.

CHURCHES.

LAKEPORT, LAKE CO., CAL -Church, 1 story and base, frame and plaster, \$10,000. Architect, John J Foley, 46 Kearny street S. F. Owners, Franciscan Fathers Church of Lakeport. Architect Foley has just been commissioned to prepare plans for a new church, which will be designed in the Elizabethian style. The main auditorium will seat 400 people. Besides this room there will be Sunday school rooms and social hall. air system of heating will be stalled. Interior will be finished in pine with ornamental plaster. Exterior of the building will be covered with cement plaster on metal lath. Working drawings are now being prepared

ALAMEDA ALAMEDA CO CAL-Church alterations. Cost not stated Architect, John J Foley, 16 Kearny street, S. F. Owners, St. Joseph's Church, Father Prout in charge. new system of heating and ventilating, an indirect system of lighting and new lighting fixtures will be Installed Plans for this work will be ready for bgures shortly.

FACTORIES & WAREHOUSES.

LOS ANGELES, CAL-Motion ture factory, 1 and 2 story and base, reinforced concrete, \$1,000,000. tects, A Tilden Norton and F. H. Wallis, Title Insurance Bidg., L. A Owners, Universal Film Co. A reinforced concrete wall 18 feet in height will be constructed along the property line where it adjoins the public highways The buildings will consist of the administration building, projecting theatre, restaurant to seat 500, planing mill, carpenter shop, 300 dressing rooms, scene painting building, several stages, one of which will be 600 feet long, emergency hospital, property rooms, laboratory and power plant. Ruildings will be designed in the Mission style and the construction will be of reinforced concrete with tile and composition roofs. Plans are being prepared.

FIRE HOUSES.

SAN FRANCISCO-Fire alarm station, 2 story and base, brick and con-Cost not stated. Architect, City Department of Architecture, Temporary City Hall, S. F. Owners, City and County of San Francisco. A two-story and basement brick and concrete building will be erected in Jefferson Square to house the central fire alarm station. Interior will be finished in pine and will contain special electric work, repair rooms and offices. There will be steam heat. Exterior of the building will be faced with cement plaster. Plans are complete and figures are now being taken by the Board of Public Works. Bids will be opened un April 8th An official proposal appears in another column of this issue Plans can be secured from the Department of Architecture. ____

FLATS.

SAN FRANCISCO-Flats, 2 story and base, frame, \$5,000. Architect, none. Owner, A. Petry, 336 Pierce street, S. F. The building will erected on the west side of 11th avenue north of Fulton street, covering an area of 25 by \$1 feet, and has been designed to contain two modern flats of five and six rooms. Interior finish will be of pine, redwood and some bardwood veneer. Oak floors will be used in the living room, dining room and reception hall. There will be open fire places and tile mantels. Bath rooms will have composition floors and tile walnscot. Automatic water heaters will be installed. Exterior of the building will be covered with rustic and cement plaster on metal lath. Plans are in the hands of the owner and the work will be done by Day

SAN FRANCISCO-Flats. 3 story and base, frame, \$4,500. Architect, M Mattanovich, David Hewes Bldg., S. F. Owner, Mrs. V Kusish. The building will be erected on Pacific street west of Powell, and will contain two flats and a store. The structure will have a 20-foot frontage and a depth of 54 feet. Interior will be finished in pine and redwood. Open fire places and tile mantels are specified. Bath room will have tile wainscot and composition floor. Exterior of the building will be covered with rustic and shiplap. Plans are complete and work will be done by Day Labor. All materials are now being purchased.

SAN FRANCISCO-Flats, 2 story and base. frame, \$4,000. Architect, none. Owner, V. Filippis, 866 Union The building will be street, S. F. erected at the southwest corner of Montgomery and Union streets, covering an area of 26 by 70 feet. Plans show two modern flats of five and six rooms. Interior finish will be of pine and redwood. Some oak floors will be used. Each living room will have a large open fire place with tile or brick mantel. Bath rooms will have composition floors and tile walnscot. Automatic water heaters are specified. Exterior of the building will be covered with rustic and shiplap. Plans are complete and in the bands of the owner who will do the work by Day Labor. All materials are being purchased, _

GARAGES.

SAN FRANCISCO-Garage, 1 story and base. Class A construction. Cost not stated. Architect, John A. Ettler, 604 Mission street, S. F. Owner, John V. Oppel. The building will be erected on the south side of Natoma street near Second, and will cover on area of 68 by 70 feet. There will be steel frame, steel roof trusses and concrete walls and floors. Steel and foundations have been designed beavy enough to carry three additional stories. A completely equipped machine shop for automobile repairs will be installed. Exterior of the building will be covered with pressed brick. Plans are complete and figures are being taken.

GOVERNMENT WORK AND SUPPLIES.

Cement for Resignation

The Secretary of the Interior has ditreted the reclamation service to award the following contracts for Portland cement:

To the United States Portland Cement Co., of Denver, Colo., for 12,000 barrels to fill part of the requirements of the Uncompangre and Grand Valley irrigation projects, Colorado, at 96 cents per barrel, f. o. b. cars at Concrete, Colo. The bidder stipulated that not to exceed a total of 12,000 barrels

would be furnished.

To the Colorada Portland Cement Company, of Denver, Colo., for 140,000 barrels for use on the Uncompangre

and Grand Valley projects in Colorado. and for the Rio Grande project at Elephant Butte dam and the North Platte project in Nebraska. This cement is to be delivered f. o. b. cars at Portland, Colo., at \$1 per barrel.

To the Southwestern Portland Cement Co., El Paso, Texas, for 21,000 barrels to be used on the distribution system of the Rio Grande irrigation project, New Mexico-Texas, at \$1.50 per barrel, f. o. b. cars at El Paso, Tex.

San Francisco, Cal., Randway,

The contract for constructing subhase of new roadway at the U.S. Marine Hospital, San Francisco, Cal., bas been awarded to W. H. O'Brien, \$1,770,

Structural Steel, Pearl Harbor,

In connection with the fabrication and delivery of structural steel for the marine railway at Pearl Harbor, Hawhile hids for which will be opened on April 4 at the bureau of yards and docks, Navy Department, it is estimated that the following quantities are required: 520,000 pounds fabricated structural steel, 37,000 pounds plain cast iron, 8.700 pounds galvanized cast iron, 10,000 pounds plain tie rods and bolts, 1,150 pounds galvanized bolts and fastenings, 5,500 pounds plain chain, ad 3,700 pounds galvanized chain.

Saa Francisco Circuine No. 129,

The following bids were received and award made by the depot quartermaster, San Francisco, Cal., under office circular No. 129, for furnishing two tail. shafts, propeller, right and left hand, for the mine planter "General Henry J. Knox:"

Bethlehem Steel Co., Crocker Building, San Francisco, Cal., \$640 each; delivery in 50 days,

Moore & Scott Iron Works, 678 2nd street, San Francisco, Cal., \$547;

Main Street Iron Works, 163 Main street, San Francisco, Cal., \$473: 16 daya.

Union Iron Works Co., 311 California street, San Francisco, Cal., \$548; 12 days,

Ker Lloyd Iron Works, 252 Spear street, San Francisco, Cal., \$675; 31 days

United Engineering Works, 224 Spear street, San Francisco, Cal., \$456; 20 days: accepted ..

The U. S. Navy Yard, Mare Island, Cal., submitted an estimate of \$937 for both shafts, plus \$15 for inspection: material to be in conformity with hureau of shipping requirements, and a price of \$746 for both blades, plus \$15 for inspection, with sleevs and nuts of

Deaver, Colo., Mechanical Equipment, Etc.

All blds received by the supervising architect, Treasury Department, Washington, D. C., February 16 for the mechanical equipment, minor outside work, and interior finish of the U. S. post office at Denver, Colo., have been rejected.

Deaver, Cola., Past Office.

Supplemental bids have been asked by the supervising architect, Treasury Dapartment, Washington, D. C., for minor outside work, interior finish, and mechanical equipment of the U.S. post office at Denver, Colo., bids for which were originally opened February 16.

Alameda, Cal., Shelving,

The contract for installing redwood shelving in the basement storage room of the U.S. post office at Alameda Calhas been awarded to A. T. Spence, 180 Jessie street, San Francisco, Cal., at

Building 58, Puget Sound,

A new advertisement for bids for fireproofing building 59 at the Puget Sound navy yard is to be issued in about two weeks.

\$23,000,000 for Recinmation.

Secretary Lane has instructed the Reclamation Commission to push to completion as rapidly as possible all uncompleted reclamation projects. The plans made by the service, which have been approved by the secretary, contemplate the expenditure of \$23,460.555 during the calendar year 1914. This amount covers the largest program ever outlined in the history of the Reclamation Service. Allotments have been made for the various projects as follows: Arizona, Salt River..... \$909,846.17

Arizona-California, Yuma.	831,126.25
California, Orland	255,700.18

Totals\$23,460,555 05 Below is a general outline of the proposed expenditures, by states, projects and features. The secretary's approval not only limits the expenditures on the various features, but no transfer of funds between features will be permitted except after specific approval of the secretary, and then only after detailed and itemized statements have heen made by the projects showing the necessity or desirability of such transfers. These plans are based upon certain assumptions and upon the conditions that existed at the beginning of the year: therefore, it should be borne in mind by the water users that future unforeseen conditions may materially change the proposed operations outlined below

Arigana.

In Arizona it is proposed to expend the sum of \$909,846 on the Salt River project and \$831,000 on the Yuma proj-

Salt River .-- The items of expenditure approved by the secretary comprise \$154,321 on the power system; \$114,561 on the North Side Canal system, \$98,173 on the South Side Canal system; \$15,937 for wells for irrigation; \$2,500 for six sites for zanjero houses and \$3,600 for their construction, and \$10,887 for the survey of farm unit boundaries. \$45,000 has been allotted for contingencies, and it is proposed to spend \$464,866 in the operation and maintenance of the system to irrigate the lands under cultivation. This includes the proposed expenditure of \$80,500 in the operation of the power plants.

Yuma .- The total amount to be expended is estimated at \$831,000, distributed as follows: \$10,000 on slulce and regulator works for the Laguna dam; \$20,000 on the reservation distribution system; \$10,000 on the Yuma main canal (California), and \$231,352 on the Yuma Valley distribution system. On river front protection along the Colorado River it is proposed to expend \$380,480. It is also planned to expend approximately \$50,000 on drainage on the Yuma Indian reservation and \$112,000 in the operation and maintenance of the system as now constructed to irrigate the lands under cultivation

Cattfornia.

In California it is planned to expend \$255,700 on the Orland project and \$5,000 on the Iron Canyon project in co-operation with the state of Califor-

Orland .- The approved expenditures are \$179,200 on the storage works to supplement the water supply and increase the irrigable area; \$6,000 on the canal; and \$50,000 on the extension of the lateral system to increase the Irrigable area 6,000 acres.

Calprado.

In Colorado the plans contemplate the expenditure of \$1,873,000 on the Grand Valley project and \$750,800 on the Uncompangre Valley project.

Grand Valley.-The items of expenditure comprise \$300,000 on the construction of headworks: \$513,000 on the construction of the Main Canal Canyon Division 1; \$215,000 on the Main Canal, Division 2; \$160,000 on the Main Canal, Division 3; and \$342,000 on Division 4. Telephone line construction for the year is estimated at about \$8,-600, while expenditures to be made for constructing buildings and miscellaneous structures amount to \$13,600. In addition to these Items it is proposed to expend \$300,000 in partially structing the lateral system and \$7,000 in investigating power development.

Uncompangre Valley .- The items approved are expenditures of \$1.876 for buildings, while \$60,000 is to be expended on continuing lining on Gunnison tunnel and \$5,000 on placing riprap and grouted paving protection to the sluice works of the Gunnison River weir. In addition the plans contemplate the expenditure of \$225,000, \$55,000, \$100,000, \$50,000, and \$10,000 on the East, West, Selig, Ironstone, and Garnet systems respectively.

Idaho.

In Idaho it is planned to expend \$3,-600,000 on the Boise project and \$477,-000 on the Minidoka project.

Boise.—The proposed expenditures comprise \$2,400 on camp construction; \$21,000 on wagon roads, \$30,000 on camp maintenance; \$600 on clearing Arrowrock Reservon \$14,000 on power development at Arrowrock, and \$459,-000 on preparatory expense and incidental operations on the Boise River Storage Unit In addition to these expenditures on the Borse River Storage, \$2.219,000 is to be expended on construction work on the Arrowrock Dam The approved expenditures on proper. the distribution unit are \$42,000 on gravel facing the Deer Flat embankment, \$55,000 for canals and lateral system on the Main Canal, \$74,000 for canals and lateral system for Deer Flat Reservoir; \$8,000 on the survey of farm units, \$150,000 on drainage in the Proneer Irrigation District; and \$50,une on miscellaneous drainage.

Minidoka,-The expenditures pro-posed to be made comprise \$46,000 on the distribution system of the gravity unit and \$52,100 on the South pumping distribution system, \$2,000 to complete the cottages now under construction at the power plant, \$17,570 for enlarging the capacities of the South Side pumping stations, \$5,700 on the West End pumping extension; and \$9,500 on the substations at Burley and Marshfield and for other appurtenances in connection with power deliveries. \$206,000 is to be expended for drainage. In the operation and maintenance estimate the sum of \$10,000 is included for commercial power operations.

Montana

In Montana it is planned to expend \$281,000 on the Huntley project and \$3.93,000 on the Milk River project, exclusive of the St Mary Storage, on which it is planned to expend \$434,630; while on the Sun River project the proposed expenditures total \$1,712,000, and on the Lower Yellowstone project. \$103.00

Huntley—\$15,000 is to be expended on canal extensions \$15,000 on drainage. Milk fiver texclusive of 8t. Mary Storage)—\$470,000 on the construction of Vandalia diversion works: \$355,000 on the canal system, \$500,000 and additional huidings: \$100,000 and the same system and the system of the system syste

St. Mary Storage—The proposel expenditures comprise \$2.800 for surveys, \$18.712 for real estate, \$11,928 for additional buildings; \$2.000 on telephone line, \$10,000 on roads, \$172,500 on storage works, \$68,000 on diversion works, and \$558,000 for canals.

Sun River.—The estimated expenditures on this project are \$220,000 on the Plishkun Reservoir, \$3,000 on the Willow Creek Reservoir, \$3,785 on Sun River diversion; \$41,000 on the construction of the Plishkun Reservoir Supply Canal, \$413,000 on the construction of the Sun River Slope Canal, Spring Valley Division, and \$4,000 on construction work Sun River Slope Canal, Greenfields Division; \$1,500 on the Fort Shaw Canal; \$5,000 on the Spring Reservoir Shaw Canal; \$5,000

buildings; \$2,000 on roads, \$2,000 on the examination of the project, and \$12,000 on operation and maintenance to irrigate the lands under the Fort

without and maintenance to irrigate the lands under the Fort Shaw unit Lower Yellowstone.—The proposed expenditures are \$53,600 for additional

expenditures are \$53,600 for additional drainage, \$2,000 on the distributing \$5.8000; \$500 on highway bridges, \$700 for lands and rights of way.

Vevada.

Truckee-Carson .- The plans for the year contemplate an expenditure of approximately \$507,700, the items comprising \$2,000 on permanent buildings. \$30,000 on extending the distribution system, \$10,000 on extension surveys; \$540,000 on the Labortan works, \$10,000 on the main Truckee Canal, \$2,500 for lands and rights of way, \$5,000 on the survey of nrigable lands, \$1,000 on the extension of the telephone system, and \$50,000 on mydroelectric development. In addition \$50,000 is to be expended in constructing drainage systems, \$30,000 on the partial construction of the canal to reach the lands of the Labortan Bench

New Mexico.

In New Mexico texclusive of the Rio Grande project) the proposed expenditures to be made during the calendar year are \$194,100 in the Carlshad project and \$110,000 on the Hundo project.

Carlshad — The proposed expenditures are \$72,000 for lining the present canal distribution system; \$50,000 for additional dramage, \$1,800 on laterals

Hondo,—The estimated expenditures comprise \$6,000 on the lateral distribution system, \$84,000 on the construction of the Hondo canal, and \$10,000 on the operation and maintenance of the system.

Ven Mexico-Texas.

The expenditures to be made on the Rio Grande project proper are \$941,529, while on the Eleplant Butte storage works the amount is \$2.741,000.

Rio Grande—The items approved comprise \$58,500 on the construction of the Mesilla Valley canal system; \$210,000 on the El Paso Valley system; \$210,000 on river control, \$50,000 for drainage, and \$25,000 for the operation and maintenance of the present works to irrigate the lands in cultivation under the Franklin Canal and in the Leasburg Chil.

Elepiant Butte Storage — The expenditure to be made in connection with the storage works are \$12,000 for waron roads, \$299,400 on excavation for the dam. \$1,870,000 on masonry for the dam. \$1,870,000 or spillway construction, \$178,000 on the embankment; and \$36,700 for camp and plant buildand \$36,700 for camp and plant build-

Oregon.

The expenditures proposed to be made on the Umatilla project during the year are \$3.72,000, on the Klomath project, \$175,219, on the present coperative Work, \$472.917 for construction work in co-operation with the state under an agreement dated May 5, 1912; and on Columbia River Cooperative work in present, \$12,000.

Umatilla—The expenditures planned are \$5,000 on the storage works, \$30,000 on 000 in extending the distributing system, \$5,000 for additional buttorings and real estate; \$500,000 on the construction of the West extension.

Klamath .- The proposed expendi-

tures comprise \$7.000 for extending the distributing system and approximately \$101,000 on the construction of additional drainage works.

Ctab.

Strawberry Valley .- The plans for this project are indefinite, owing to the fact that no satisfactory arrangement has as yet been made with the Water Users' Association regarding additional construction. Tentative expenditures have been approved for the purpose of having funds available providing a satisfactory agreement is reached. The proposed expenditures comprise \$30,iiii for power plant operation and maintenance; \$322.747 on the construction of the Highline Canal; \$4,893 on Spanish Forks canals, \$189,000 on a distributing system from the Highline Canal, \$105,000 on the Goshen lateral distributing system. The total tentative expenditures aggregate \$686,000.

Washington.

The proposed expenditures to be made in this state during the calendar year are \$149,000 on the Okanogan project; \$608,600 on the Storage Unit of the Yakima project; \$658,000 on the Sunnyside Unit, and \$114,000 on the Theton Unit.

Okanogan.—The estimated expenditures are \$132,000 on extending the distributing system, which will include the continuation of concrete lining of the present canals and pumping plant; and in addition \$15,000 for operation and maintenance of the system for the irrigation of the lands under cultivation.

Vakima Niorage.—The proposed exexpenditures are \$14,160 on the main Kachess Reservoir: \$480,000 on the Keechelus Reservoir: \$20,000 on the Cleatum Reservoir: \$10,000 on investigations of McAllister Meadow; \$11,400 for continuing bydrographic investiditions; and \$1,500 for the operation and maintenance of the Kachess Dam maintenance of the Kachess Dam

Vakima-Sunnyside.— The proposed expenditures are \$111,160 on the main canal and headworks: \$2,700 on the Shipes Mountain Division: \$8,000 on Maison Sulphur Creek wasteway: \$200 on Maison Division: \$15,000 on the distribution system: \$100,000 on pumping plants on the distributing system: and \$190,000 on for pumping plant machinery, to getter with \$216,000 for the Benton extension. The construction of the last three items are contingent on the water users meeting the conditions required by the secretary.

Yakima-Tieton. — The items of expenditure comprise \$1,050 for investigation of the Tieton Canal; \$1,745 on the distributing system; \$49,260 on the distributing system; \$49,260 on the construction of a regulating reservoir at the headwaters of the Tieton River; \$15,060 in connection with Bumping Lake Reservoir.

Wyaming,

Shoshone.—The estimated expenditures are approximately \$593.400, comprising \$362.508 on the Shoshone River Storage; \$80.89) on the Garland Canal and laterdls, \$101.860 on drainage; and \$18.340 on operation and maintenance.

Miscellaneous.

In addition to the expenditures that can be directly applied to the various states it is planned to expend \$50,000 for exploration of the Colorado River Basin to determine questions of water storage and diversion sites, and \$50,000 on artesian well experiments.

Pearl Harbor Dry Dock,

Te naval appropriation bill, as reported from committee, increases the limit of cost of the dry dock at Pearl Harbor by \$1,500,000, in accordance with the recommendations of the Secretary of the Navy and as a result of the negotiations which have been conducted during the past month or two with the contractors for this work. It looked at one time as if the contractors would refuse to continue and that the government would be obliged to take up the project. After much discussion there has been an agreement among all those concerned as to the best method to pursue. At a conference at the Navy Department between Mr. Alfred Noble, the consulting civil engineer referred to the chief of the bureau of yards and docks (Civil Engineer Stanford), and Civil Engineer F. R. Harris all expressed the opinion that the construction of this dry dock under the present plans and specifications was not only fraught with the greatest hazard and probable delay in eventual completion, if completed at all, but was inadvisable as an engineering work and was not based on satisfactory assurance and factors safety which are usually required in good engineering practice. In short, that it was impracticable. These three engineers agreed that a different design, depending upon the use of floating caissons or boats gave every assurance of the successful and early completion of this work, but that it would involve an increase in the authorization for this work of anproximately, but not over, \$1,500,000. The contract obligation for the dry dock now stands at \$3,168,461.61. of which the sum of \$1,036,330.01 has been paid the contractor on monthly youchers on account of work done. There are sufficient funds remaining under the appropriation to defray the cost of proceeding with this dry dock on the new plans indicated during the next fiscal year, but to enable the department to enter into an agreement with the contractors to proceed on the new plans it would be necessary to increase the limit of authorized cost for this structure. Civil Engineers L. M. Cox and F. R. Harris have been placed in charge of the work of design and readjustment in Washington and are engaged on this duty,

-HALLS & SOCIETY BLDGS-

OAKLAND, CAL-Lodge baff, and stores, 5 story and base. Class C construction, \$200,000. Architect, Albert J. Mazurette, Albany Bidg., (akland. Owners, Oakland Moose Hall Association. SCHOOL-2 story and base, reinforced concrete, \$193,000. Sacramento, Architects, Shea & Lofquist, Bankers' Investment Bldg., S. F. Owners, City of Sacramento, All bids for the construction of the new school building have been rejected as above t're appropriation. Plans will be revised, cutting the height of the building by two feet and making some changes in the type of floor constructum which, it is believed, will bring the hunlding cost to within \$193,000. Revised plans will be out for figures very shortly. Further mention will be made of the work.

SCHOOL-2 story and base, brick, \$75,000, Stockton, San Joaquin Co., Cal. Architects, Stone & Wright, 24 South California street, Stockton Ownrs, City of Stockton. This building, known as the East Side School, has

COST, \$720

been out for figures before. Plans were not revised as the Board of Education believed that cullusion existed among the three firms bidding. The building will contain twelve class rooms, assembly hall and office. Interior will be finished in pine throughout with hardwood floors in the class rooms. There will be steam heat, oil burning furnace and a vacuum cleaning system. Exterior of the building will be faced with pressed brick. Dids will be opened on March 31st. Plans can be secured from the architects.

SCHOOL-3 story and base. Class C construction. Cost not stated. Stockton, San Joaquin Co., Cal. Architects. Stone & Wright, 24 South California street, Stockton, Owners, St Agnes Academy. The building will be erected at the corner of Purk and San Joaquin sareets and will cover a considerable are. There will be a number of class rooms, living apartments and dormitories. Plans provide for stram heat and hot water supply. Interior finish will be of pine throughout Some maple floors will be used. Bath rooms will have tile wainscot and composition floors. Exterior of the building will be faced with pressed brick Plans are complete and segregated figures are being taken. Father McGough is in charge of the work

HIGHWAY CONSTRUCTION - Cost not stated. California. Engineer, State Highway Commission, Forum Bldg., Sacramento. Owners, State of California. Plans are complete and figures are now being called for the construction of Portland cement and concrete highways together with some asphalt work in the following counties: Solano, Alameda (two pieces), Kern and Ventura. Plans and specifications can be had at the offices of the State Highway Commission, An official proposal appears in another column of this issue

RECLAMATION WORK - Cost no stated, Orland, Glenn Co., Cal. Engineer, United States Reclamation Service, Orland, Owners, United States Government. Sealed proposals will be received at the office of the United States Reclamation Service, Orland, Cal., until 2 o'clock p. m April 21, 1914 for building the structures of the East Park Feed Canal in Colusa County. California, near Stonyford, and about 23 miles from Sites, the terminus of the Colusa and Lake Railroad. The work involves about 6,000 cubic yards of excavation, 4,000 cubic yards of concrete, the placing of about 49,300 pounds of reinforcing steel and 14,150 pounds of metal work and gate fixtures, and the placing in structures of about 36,500 feet, B. M. of lumber. For particulars address the United States Reclamation Service, Washington, D. C., Portland, Ore., or Orland, Cal. F. H. Newell, Director.

BOTH THE OWNER and the Architect are particularly interested in all kinds of building materials, power and heating systems, building specialties, every accessory that goes into their project. Every issue of the Building and Industrial News contains hundreds of new building and construction reports giving the names and addresses of both the owner and the architects. Both the owner and architect receives a copy of the Building and Industrial News containing mention of their individual job conspicuously marked. Thus the builder and the architect have in their hands not only the news items of their particular project, but also the announcements and the advertisements of energetic business men who have goods to sell that are necessary to construct and equip the undertaking. IS YOUR ADVERTISEMENT AMONG THESE?

Catarrh Can Be Relieved

THERE IS NO NEED for you to continually suffer from Calarth and Cold in the Head. It makes you miserable, doem't it? You really don't care whether things go right or not and you wonder when you'll ever get over it. And you will not get over it mitly oug get the Clover Leaf Gatarth Remedy, and use it. It will relieve you, and you'll wonder why you had not used it concer. We are so positive that this will relieve you of your Catarth or Cold in the Head, that we guarantee you satisfaction or we will refund your money.

The Hotel is only as good as its service

The new Ritz-Carlton Hotel, in Philadelphia, has four Electric Elevators and six Electric Dumbwaiters, furnished by the Otis Elevator Company.

> ARCHITECT Horace Trumbaner

Other Hotels of the Ritz-Carlton chain which are Otis equipped---The Ritz-Carlton,

New York

The Ritz-Carlton. Montreal

The Plaza, Buenos Aires

Grand Hotel et de la Plage Guaruja, near Santos. Brazil

The Carlton, London The Ritz, London The Hyde Park, London The Ritz, Paris

And its service can be only as good as its elevators----which is one good reason why hostelries with reputations to maintain, like the latest link in the Ritz-Carlton chain, at Philadelphia, have

Otis Elevators

Choosing from the various Otis machines, the Architects can provide hotels with elevators of the type called for by the character of the structure and insure perfect service---can equip all buildings of all classes in accordance with their needs.

Give a building unsatisfactory elevator service, and its other excellence can not overcome the handicap. Our offices in ninetyone cities in the United States are always at the Architect's call and can assist you in making your elevator specifications 100 per cent correct.

Frank Neidick

Carpenter and Builder Phone Mission 5126

2669A Howard St., Bet. 22 nd and 23rd

San Francisco

As a carpenter and builder, Mr. Neidick has had twenty-two years of experience, during which time he has mastered the business in all its details and has established an excellent reputation for the high character of his work. This statement is proven by the fact that he has built fifty-six flats for one man all of which were erected in the most satisfactory manner. Not only is the work of Mr. Neidick of the highest standard, but his business relations with the public are characterized by the strictest integrity. Mr. Neidick has brought to a successful issue many contracts throughout this city, which stand as a testifying demonstration for his knowledge and ability in his line of business. He is also a prominent stockholder of the General Contractors' Association.

Editorial Comment.

Governor Johnson has issued a proclamation commending to the people of California the observance of Saturday, April 18, as "Fire Prevention Day." which sets forth its objects in the following language:

"The purpose is to bring about united effort on this occasion to minimize the dangers of fire. I wish to join in making urgent appeal to all citizens to lend their energetic aid

"In recognition of the part insurance companies have had in the rebuilding of San Prancisco, plans have been made for a celebration on Threthermore that the Exposition grounds in San Francisco. It is my earnest hope that adequate expression will be given at that time to the confidence and good will so splendidly earned by these companies that met their obligations honorably and courageously in the hour of overwhelming disaster."

The Northwestern Pacific has applied to the Railroad Commission for permission to issue something more than five million dollars worth of bonds for the purpose of extending its railroad lines to Eureka in Humboldt County and into the great lumber fields of the northwestern part of the state. This will tap a virgin field of country, rich not only in its lumber resources but also in its agricultural possibilities. As it is now the only means of acress to a market of any considerable size is by water and at rough seasons of the year Humboldt bay is a somewhat dangerous harbor.

The coast range of mountains while not very high are extremely rugged and present great difficulties in rail-road building. So that a road constructed through this particular part of the country is an expensive piece of work. No doubt the road will in time be extended into Oregon so that there will be a continuous line connecting the coast range cities and the great lumber and agricultural district of the Pacific shore.

As the population of this country grows and the great cattle ranges are taken up the production of beef cattle in proportion to the population steadily decreases. At the present time some beef is imported notably from South America and some from other sources. It is said that aloud 3,000,000 pounds a month is imported from Argentine, but that the importation is controlled by the Chicago meat trust or the packing bouses there which import most of the meat from Argentine. As

this importation of meat amounts to only about one per cent of the amount consumed there is but little if any change in the prices resulting from ontside competition.

The Examiner states that out of the Panama Canal Tolls victory will come party dissension and disaster. Certainly if the wish is father to the thought William Randolf Hearst would desire nothing better than to have party disaster overtake the administration.

It is interesting to note the alignment on this and other questions. who have a political ax to grind are arranged against the administration. Among them also are those who heheve that we have a right to do as we please with our coastwise trade and exempt what ships we please in the canal privileges. No one worthy of being considered doubts the President's sincerity or the clarity of his judg-If he takes the stand that we should treat all nations alike under existing trealies it goes without saying that he thinks that the only honorable thing to do. And all the talk of Hearst and Ballyhoos of his kind will not change anyhody's opinion.

The idea that Andrew Carnegie instituted the objection seems to he incomprehensible. That Elihu Root in the service of the great corporations, might have entertained such a thing is probable. But as the question now presents itself in the alignment in Congress it is a question of difference of opinion with the prejudice in favor of the President because Hearst and every other self seeker is arrayed against him.

In commenting upon the recent address of President Wilson as to his private feelings in the matter of the responsibilities of his office, the Chronicle states that no one among his bitterest political opponents question the clarity of his mind on the earnest-ness of his patriotism. That is probably true. But it does not prevent such men as William Randolph Hearst from distorting facts and conveying to the people of cheap intelligence the idea that there is a tory and Anglomaniac in the office of President.

The latest thing that Hearst has discovered is that the phrase "watchful waiting" was taken from Milton. And this is enough to stamp him as a plagearist and hold him up to public scorn, according to the Hearst idea.

When Bryan in his political career was asked about Hearst be said be never discussed men but principles. And surely if he were discussing principles the name of Hearst would never be mentioned.

The Proposed Trust Legislation.

Speech of Henry R. Seager, Professor of Political Economy, Columbia University, New York,

Reprinted from the Nation's Business.

The feature of the proposed trust legislation which I have been asked to make the starting point for my comments is the Interstate Trade Commussion. In arging the creation of such a Commission, President Wilson is certainly voicing the mature judgment of students of the trust problem. It is a logical development of the Bureau of Cotporations established in 1903, on the initiative of President Reosevelt. It was urgel specifically by President Taft in his trust message of December 5, 1911, as a necessary supplement to a federal liw providing for the incorporation of interstate commerce companies, which he also advocated Nearly every witness testifying before the Congressional Committees which have investigated the trust problem during the last five years have stoken in favor of it. Thus the President's anticipation that 5the opinion of the country would instantly approve of such a commission" pears to abundantly justified.

The Newland's bill to create an Interstate Trade Commission has ceived more prolonged and careful attention than any of the other three measures now before Congress. cludes the essential features of the bill which Senator Newlands has urged upon his colleagues in the Senate for some time, together with additions designed to increase the efficiency of the Commission as the expert adviser of the attorney general and the courts In brief the bill provides,

(1) That a Trade Commission of live members shall be created to take over the work of the Bureau of Cornumations

(2) That corporations engaged in interstate or foreign commerce, except common carriers, shall supply any information that may be required by this Commission, either at periodic intervals or on special occasions, and grant acces to their books and rec-

(3). That such information shall be made public in such manner and to such an extent as the Commission may deem wise.

(4). That the Commission shall have power to subpoena witnesses and require t e presentation of such books and records as may be necessary for its information and that witness may not return to testify on the ground of incriminating themselves, but shall enjoy the customary immunity.

Go. Tout the Commission have power to investigate on complaint alleged violations of the antitrust act and to report any violations it may discover to the attorney general:

That it shall also investigate any corporation at the request of the attorney general or of the corporation itself to determine whether its arganization, acts or relations with other corporations involve violation of the anti-trust oct and report the changes in its organization acts or relations with other corporations necessary to bring it into compliance with that act. (7). Similarly it may be called upon by any federal court to advise as to aspects of equity suit before if or proposed dissolution decress under the anti-trust act.

(8). That nothing in the act shall interfere in any way with the authority and duty of the attorney general to enforce the anti-trust act.

The bill is thus draw to give the broadest powers to the Commission, but without in any degree weakening the responsibility of the attorney general for enforcing, or the authority of the courts for interpreting the antitrust act. Though doubtless susceptilde of improvement in minor respects I believe that it is well calculated to achieve the ends aimed at without unduly burdening or interfering with business. These ends seem to me highly desirable and I, therefore, regard this part of the legislative program of the Administration as entitled to hearty support.

Advising the attorney general when the anti-trust act is being violated and assisting the courts to draft dissolution decrees that will secure compliance with it, will be the chief duties of this new Commission. It will thus be a third arm of the government entrusted with responsibility for determining the application of the untitrust act to specific plans of business organization and specific contracts and practices. One need not be the seventh son of a seventh son to foresee that this third arm will soon be the strong arm, on which the othersthe attorney general and the courtswill come to lean. Its work is to be advisory rather than mandatory but all of our experience with commissions points to the conclusion that its advice as time goes on will be more and more controlling. I'nder the law, not only is the attorney general empowcred to call upon it for assistance, but any one may address complaints to it. Wherettoon it must investigate and inport its finding and recommendations to the attorney general. Is it not inevitable under these conditions to at that overworked official will soon come to feel that he is performing his whole duty if he undertakes the prosecutions that are expressly recom-mended by the Commission? In presenting a case in court he will, as a matter of course, give chief prominence to the evidence collected by the Commission and the reasons it may have urged for believing that a violation has occurred. At first the courts may not be greatly impressed by the reasoning of the Commission-the Supreme Court was not at first greatly impressed by the reasoning of the Interstate Commerce Commission-but as time gies on, will not the views of the Commission almost certainly neevail? This may come about through the deliberate conviction of the Supreme Court that it is less competent than the Commission to decide difficult issues wisely and its deference to

expert opinion, re-enforced as it cer-

unly will be by cogent argument. l'aling this, it may come about Habridgh amendments to the enti-trust act made on the recommendation of 1 . Commission and serving virtually to overrule decisions of the courts. Thus as time gors on government prosecutions under the anti-trust act are likely to be those urged by the Trade Commission and the interpretation of the act in connection with the prosecutions is likely to be that approved by the Trade Commission. stration of such a Commission means inevitably an extension of government by commission. I am in favor of it because I believe that with the growing complexity of business relations. it is only through the guidance of commissions of experts that we can hope to keep these relations straight and to advance sound public policy.

Being in entire accord with the Administration's proposal to create a Trade Commission, I can only regret the more deeply other proposals that will in my judgment prevent that Commission from rendering the great service of which it is capable in guiding the policy of the country with refctence to industrial combinations. The second bill in the Administration's program, designed to amend the antitrust act so as to condemn expressly lected or convictions obtained in govdiscriminatory price policies and sellsants the advantage of evidence coling contracts and to give private litlcomment suits, is certainly commenda-We all agree that unble in purpose tair methods of competition will enable big corporations to wrest markets from their smaller rivals, not because they can produce more economically or make a profit while selling more cheaply but through the sleer force of their larger resources and the wider range of their operations, must be stopped. If there is any doubt whether these practices would now be condemned under the present law as unlawful restraints on trade-and I do not personally believe that there is-it ought certainly to be removed by further legislation.

The measure against which I particutarly protest as unnecessary and harmful is the third bill which undertakes not only to make the punishment for violation of the anti-trust act personal, as I agree it should be, but also to define the terms "every contract," "combination in the form of trust or otherwise" and "conspiracy in restraint of trade" and the word "monopolize," in conformity with the purrowest and most dogmatic conviction that every departure on the part of business men from unrestrained competition necessarily results in restraint of trade, and is therefore to be condemned

Advance Interpretation Hazardons To judge in advance what Interpretation may be given to the phrases of this bill would be bazardous. The hist, second and third lines of conduct condemned, that is, "to create or carry out restrictions in trade or to acquire

a monopoly in any interstate trade, business or commerce," "to limit or reduce the production or increase the price of merchandise or of any commodity" and "to prevent competition in manufacturing, making, transporting, selling or purchasing of merchandisc produce or any commodity" are probably all fully covered by the present act as involving unreasonable restraint of competition or tendency to create monopoly. The fourth line of action condemned seems, however, to go much farther. If business men may not 'make any agreement, enter into any agreement, or arrive at any understanding by which they, directly or indirectly, undertake to prevent a free and unrestricted competition among themselve or among any purchasers or consumers in the sale, production or transportation of any product, article or commodity" without rendering themselves liable to conviction for crime and to the severe penalties provided by the anti-trust act, current methods of carrying on business in the United States will have to undergo a modification. Under such a provision every understanding between railroads conveying passengers or freight between two cities, involving uniformity of rates, would be a violation of the anti-trust act. The schedule of rates of each railroad would have to be a matter for its independent determination, and if the law were strictly complied with, it would only be through the intervention of the Interstate Commerce Commission that the uniform rates, that have become wellnigh universal throughout the country and which public opinion very generally approves, could be maintained

The truth is that our governmental policy toward railroads and other common carriers has long been inconsistent The amendments to the Interstate Commerce Act giving the Interstate Commerce Commission complete control over rates, supplemented as it is about to be by the proposed measure giving a similar control over the issue of new securities, make the present restrictions of the anti-trust act, as laid down in the Traffic Association cases, illogical and unnecessary. Any further restrictions would, in my judgment, he highly undesirable, regards the common carriers we are committed by the incontestable economic facts, as well as by the terms of the Interstate Commerce Act, to the policy of regulated monopoly. To deny it or to ignore it in amending or extending the anti-trust act is to fly in the face of the intelligent opinion of the country.

It has been customary among economists to draw a rather sharp distinction between railroads, telegraph and telephone companies, street railroads, water, gas, and electric light companies and other public utilities, which are styled natural monopolies, and manufacturing, mining and other industrial companies. Monopolistic in their very nature, the first class businesses will not be adequately regulated by competition. For them we need and have developed machinery for the regulation of rates and charges in the public interest, where we have not actually undertaken government awnership and operation. This distinction is entirely ignored by the present anti-trust act and is equally ignored in the proposed amending bills, from which it might be inferred that competition in railroad rates—rate wars—were as much in the publing of dry goods.

lic interest as competition in the sell-I am one of the economists who thinks the distinction between the socalled natural monopolies and industrial enterprises such as coal mining and iron and steel manufacturing has been too sharply drawn. That combination and monopoly in connection with supplying a city like Washington with gas or electric light, with government ownership and operation or government regulation of charges and quality of service, is superior to competition will be generally admitted. I believe it is still an open question economically whether the advantage is not with combination rather than unregulated competition also in some branches of mining and manufactur-

Economies and Advantages of Concentration,

You are all familiar with the argument. Let me take the steel industry as an illustration, since the steel trust has been much in the public mind of late. We have here a branch of industry in which concentration and large scale production make for economy until a scale of operations is attained calling for millions of dollars of capital and thousands of employees. The Carnegie Steel Company, the Jones-Laughlin Steel Company, the Illinois Steel Company all grew under highly competitive conditions and each attained a gigantic size without passing the point where enlarging the scale of productive operations continued to make for economy in production. But when an industry is of such a character that success nevessitates the investment of millions of dollars in each competing aggregation of units, you have a situation where the losses due to unrestrained competition are correspondingly enormous. In times of prosperity each producing organization expands to realize more fully the economies of large scale production. Iron and coke properties are secured to insure uninterrupted supply of raw materials, transportation facilities are acquired since the business is so large as to require for its exclusive use fleets of vessels and special railroad carriers, blast furnaces and rolling mills are built in convenient proximity to permit the conversion of raw materials into finished products with least expenditure of time and effort. This development is in obedience to the laws of expanding trade. If the industry is to be economically conducted it must occur. The public interest demands that it shall occur.

A period of depression now ensues. If each of the competing units pursues its own interest blindly, disregardful of the general good of the trade, each will compete desperately to secure the largest share of the diminishing trade. prices will be recklessly cut. It is letter to operate mines and mills at low profits, at no profits, or even at a loss, than to have mines and mills shut down. the properties deteriorate and the skilled labor force that has been slowly drawn together dispersed far and wide over the country. There

is thus no limit short of actual bankruptcy to which the competitors will not find it to their interest to go so long as they remain competitors. But why should they carry their competition to such reckless lengths? Will it not be better for each and for all to produce moderately at low profits until the depression has passed and con-Serve all the producing machinery for the time when business will revive, as it surely will revive, and all will again be needed? Is such combination to restrain competition opposed to the interest of the whole community? What useful purpose after all is served by forcing large numbers of steel plants into bankruptcy in every period of depression, with the result that the machinery for production hecomes quite inadequate to meet the demand when prosperity returns and prices are forced to levels as unreasonably high as they were unreasonably low during the depression? Instead of having steel either prince or pauper is it not better to have steel a contented and moderately prosperous citizen at all times? It is contended that this life and death competition makes for more rapid improvement in productive methods, but does it? Under a regime of regulated combination each producing unit is still under strong pressure to cut down its expenses of production and to make its profits by that much larger. Is there any real evidence that improvements in methods have not been introduced as rapidly since the steel trust was organized in 1901 as they were before? In that period the open hearth process has been substituted on a vast scale for the Bessemer process. The steel trust has spent millions of dollars in developing its plants at Gary to the highest efficiency yet known in the industry. Its smaller rivals have been active. Although in many many lines prices have been steadied and run-away markets in either direction prevented, there have been eager efforts to improve on existing methods and to concentrate production at the points best fitted for it is there ever were before. I admit, however, that this aspect of the matter is debatable. The objection that I urge against this bill which attempts to define "contract," "combination," "conspiracy in restraint of trade" is that it treats the point as though it were conclusively settled. If it becomes a law and if it is rigidly enforced, as with the aid of a competent Trade Commission it ought to be, our business men will be absolutely harred from taking any steps to restrain competition when its only effect may be to force some of them overloaded with fixed capital into bankruptcy and to so reduce the producing capacity of the country that in the next period of activity there will be as serious an under-supply as there was an overspply in the period of depression. My plea is that with a Trade Commission empowered to compel full publicity of business operations and the law left as it is now is condemning not all contracts and combinations in restraint of competition but only those in unreasonable restraint, we should be able for the first time to test the real merits of combination in the industries where it is claimed to be superior to unregulated competition. We have

not been able to make the test in the past because unfair methods of competition have been used and because the opportunity to reap large returns at the expense of so-called "innocent investors" has given an artificial turn to the whole combination movement. The Trade Commission could put a stop to the use of unfair and discriminatory methods by calling the attention of the attorney general to them and recommending him to begin prosecutions. The publicity of financial operations which it would would curb the activities of the promoter and the high financier. Monopoly achieved by artificial means would still fall under the condemnation of of the law. There would thus be scope only for restraints on competition which were believed by the Trade Commission and by the attorney general, acting upon its advice, to be reasonable in the sense that the benefits they might confer on the parties agreement or understanding the would be shared by the whole commu-Would such a policy involve any real risk to the best interests of the country, which the proposed bill penalizing every relaxation of the ardor of competition would preserve? Would it not rather enable us to feel our way along toward a solution of this difficult combination problem that would be permanently satisfactory because balancing fairly the interests of producers and consumers

's and consumers:

Points from Germuns. I said a moment ago that I thought the superiority of regulated combination over unregulated competition for other industries-not many but a few -than natural monopolies, was at least debatable. For this country it is debutable, because we have not proved how efficiently we could impose the necessary degree of regulation For Germany, I submit, it is no longer debatable. German courts early took the view that combination to check an excessive fall of prices in a period of depression might be a good thing for the community as well as for the producers immediately concerned. Consequently regulated combination, not competition made obligatory, has become the established policy of that country. No one who has studied the results of the combination movement In Germany in moderating extremes of prosperity and depression and in promoting toreign trade can doubt that, for that country at least, the policy adopted, which is the exact opposite of the policy that would be confirmed and strengthened for this country lo the proposed legislation, has leep a good thing. German economists and public men are almost unanthous in approving it, though, of "curse admitting that the machinery for regulating the cartels is still inadequate and that a vigorous governmental policy is hore-sary to prevent producers from taking advantage of consumers Is it probable that a polmy so generally approved in Germany is entirely unsuited to the 1'nited States?

Two objections may be urged against the policy of allowing even a little latitude to the combination movement under the supervision of the proposed Trade Commission, Frat, it has been said that if given the slightest encouragement the combinations would

regulate the Trade Commission rather than the Trade Commission the combinations. This contention would carry more weight to my mind if it Were not contraduted by our experience with the Interstate Commerce Commission. No corporations could be more powerful or more firmly entrenched in their privileges than were the railroad companies of this country when the Interstate Commerce Commission was established in 1887. It has been a long struggle but at no stage has there been any suspicion that the Commission was controlled by the railroads. Today the authority of the Commission over railroads is so securely established and so universally acknowledged that there seems more danger that the Commission will not show adequate consideration for the legitimate needs of the railroads than that it will fail to safeguard fully the legitimate rights of the public.

The other objection is the familiar one that such a policy will land us in socialism. I do not think so, I think rather that the creation of an able and efficient Trade Commission for the supervision of Industrial combinations will insure for us the advantages of combination, which is one of social-

ism's most alluring promises, and preserve us from the great loss of effitiency in business organization and management which I conceive to be

socialism's greatest weakness. it is a trite remark that we live in age of co-operation. My argument against the complete prohibition of anything like concerted action on the part of directors of our great industries reduces to the plea that our busines men be given a chance to cooperate so far as they can and will, but under conditions that will enable all of us to enjoy the benefits of their co-operation. So long as desire for private gain continues the dominant motive of those engaged in business, competition will remain a dominant force in business. But let us not make a fetish of competition! It also has its bad as well as its good side. While recognizing its value and making strenuous efforts to insure it a fair field for its operation, let us not ignore the fact that co-operation also has its legitimate place. On a higher moral plane than competition, its extension, under conditions that compel adequate regard to the public interest. must prove advantageous not only to business men but to the whole community.

Firms desiring acres on special classes of hulldings, such as Banks, Churches, Schools, Hutels, etc., will sed such from all classified and grauped under proper headings, commencing on this page, These same liems are again repented under "LOCALATIES" in the list port of our owns department.

APARTMENT HOUSES.

SAN FRANCISCO-Apartment house story and base, reinforced concrete, Architect, none, Owners, Kincanon Construction Co. 215 Montgomery street, S. F. The building will be erected on the south side of Ellis street west of Hyde and will cover an area of 23 by 13712 feet. Interior will contain a total of sixteen suites airanged in two and three room apartments. Pine and elm will be used for interior trim. Plans provide for steam beat an automatic elevator and bot water supply. All suites will have wall beds and private bath rooms, Bath rooms will have tile warnscot and composition floors. Entrance will be finished in tile. Exterior of the building will be faced with cement plaster Plans are complete and in the hands of the owners who will do the work by Day Labor. Materials are now being purchased

FRANCISCO - Apartment SAN houses, 2, 3 story and base frame, \$13,-000 and \$10,000, respectively. tects, Rousseau & Rousseau, Monadnock Bldg., S. F Owners, Metropolis Investment Co. One of these buildings will be erected at the southwest corner of Jackson and Taylor streets and the other on the west line of Tayfor street south of Jackson Each building will contain six apartments of three and four rooms. Interiors will be finished in pine with some elm panels and beam ceilings. All suites will have private bath rooms and wall beds. Plans provide for Steam heat and a hot water supply in each building. Bath rooms will have composiwainscot. En-Hoors and tile trances will be finished in tile and marble. Exteriors will be

with cement plaster on metal brick veneer bases and rustic. Plans are complete and owners will take figures at once.

SAN FRANCISCO-Apartment house, 2 story and base, frame. Cost not stated. Architect, John J. Foley, 46 Kearny street, S. F. Owner's name withbeld. The building will be erected on Gough street and has been designed for a four-apartment building. Each apartment will contain four rooms and bath. Interior will be finished in pine and redwood with some oak floors, All suites will have private bath rooms and wall beds. Bath rooms will be bnished in tile and will have composition thours. Plans provide for steam heat and a hot water system. Exterior of the building will be covered with custic and shiplap. Plans are being prepared.

SAN FRANCISCO-Apartment house, 3 story and base, reinforced concrete, \$17.000. Architect, none. Owners, J. G. Kincanon Construction Co., 215 Montgomery street, S. F. The building will he erected on the east side of Hyde street north of Eddy and will cover an area of 25 by 871/2 feet. There will be total of eleven suites of two and three rooms. Interior finish will be of pine and redwood with some elm nanels and hardwood floors. There will be steam heat and a hot water supply. -41 suites will have private hath rooms and wall beds. Bath rooms will have tile wainscot and composition floors Entrance will be finished in tile and marble. Exterior of the building will be faced with cement plaster. Plans are complete and in the hands of the owners who will do the work by Day Labor

OAKLAND, CAL - Apartment house, 2 story and base, frame, \$18,000, Architects, Elite Planners, 1814 5th avenue, Oakland. Owner's name withheld. The building will be erected on Grand avenue and has ben designed to contain a total of twelve suites arranged in three rooms each. Interior finish will be of pine with some hardwood veneer and beam ceilings. Plans provide for steam heat and a hot water supply. All suites will have private baths and wall beds. Bath rooms will have composition floors and tile wainscot. Entrance will be finished in tile and marble. Exterior of the building will be covered with cement plaster on metal lath. Plans are being prepared. Further mention will be made of this work.

BERKELEY, ALAMEDA CO., CAL .-Apartment house, 2 story and base, frame, \$10,000. Architect, Julia Mor-gan, Merchants' Exchange Bldg., S. F. Owner, Mr. H. Merritt. The building has been designed to contain eight suites of three and four rooms and will be centrally located. Interior finish will be of nine and redwood with some hardwood floors and veneer. All apartments will have wall beds and private bath rooms. Plans provide for a central heating system and hot water supply. Bath rooms will be finished in tile and will have composition floors. Exterior of the building will be covered with cement plaster on metal lath. Plans are complete and figures are being taken.

SAN FRANCISCO-Apartment house, 5 story and base, reinforced concrete. Cost not stated. Architect, William Beasley, 127 Montgomery street, S. F. Owner, Mrs. Annie Gallagher. The building will be erected on the east side of Leavenworth street between Post and Geary, covering an area of 23 feet 11 Inches by 69 feet 9 inches. There will be a total of ten suites of three rooms each. Interior finish will be of pine with some elm panels and oak floors. Each apartment will have wall beds and private hath rooms. Plans provide for steam heat, an automatic elevator, vacuum cleaning and a hot water system. Bath rooms will have tile wainscot and composition floors. Exterior of the building will be faced with white cement plaster. Plans are being prepared,

SAN FRANCISCO-Apartment house, 3 story and hase, frame. Cost not stated. Architect, William Beasley, 127 Montgomery street, S. F. Owners. D. Coleman et al. The building will be erected at the southwest corner of Howard and Rausch streets, covering an area of 50 by 100 feet, and will contain a total of 60 rooms arranged in three and four room apartments with private baths. The interior of the building will be finished in pine throughout. All apartments will have wall beds. Plans provide for steam heat and a hot water supply. rooms will have tile wainscot and composition floors. Exterior of the building will be faced with pressed brick veneer and cement plaster on metal lath. Plans are complete and figures will be called for at once.

SAN FRANCISCO—Apartment house, 7 story and base, steel and reinforced brick. Cost not stated. Architects, Rousseau & Rousseau, Monadnock Bldg., S. P. Owner's name withheld. The building will be erected on the north side of Binsh street west of Stockton on a lot 40 by 90 feet, There

will be a total of 36 suites of two rooms and hath each. Interiors will be handsomely thished in pine and hardwood veneer. Plans provide for steam heat, an automatic elevator, vacuum cleaning system and hot water supply, all both rooms will have the wainseed and composition floors. What beds will be instufied Entrance will be instufied Entrance will be instufied. Enter or of the Initiality, will be faced with pressed bank and terra cotta.

LOS ANGELES, CAL. - Apartment house, 3 story and base. Class C construction. Cost not stated. Architect, Leonard L. Jones, Central Bank Bldg., L. A. Owner, Herman Gutterson. The building will be erected on West 10th street near Figueroa, covering an area of 60 by 125 feet. There will be 75 rooms arranged in two and three room apartments with wall beus and private baths. Interior finish will be of pine throughout. Plans provide for steam heat, elevator service and a hot water supply. Bath rooms have tile floors and wainscot. will Entrance will be finished in marble and tile. Exterior of the building will be faced with pressed brick. Plans are complete and in the hands of the owner who is b - all contracts.

LOS ANGELES, CAL - Apartment house, 3 story and base, brick. Cost not stated. Architect, E. S. Williamson, Story Bldg., L. A. Owner, C. E. The huilding will be erected on Towne avenue near 5th street, and has been designed to contain 63 rooms. which will be arranged in suites of two and three rooms with private Interiors will be finished in baths. pine with some hardwood veneer. Plans provide for steam heat and a hot water supply. Bath rooms will have tile wainscot and composition floors. Entrance will be finished in marble Exterior of the building will be faced with pressed brick. Plans are being prepared

LOS ANGELES, CAL, - Apartment house, 3 story and base, brick and steel. Cost not stated, Architects, Architectural Designing Co., Grosse Bldg., L. A. Owner, Mr. Neely. The building Will cover an area of 50 by 150 feet and is to be erected on Hope street between 1st and 2nd streets. Interior will be arranged for 78 rooms. Apartments will be of the two and three room type with private baths. Pine and hardwood veneer will be used for trim. There will be steam heat and a hot water supply. Bath rooms will have tile wainscot and composition floors. Exterior of the building will be faced with pressed brick. Plans are being prepared.

SANTA MONICA, LOS ANGELES CO., CAL.-Apartment house, 3 story and base. Class C construction. Cost not stated. Architect, Albert C. Martin, Higgins Bldg., L. A. Owner, Thomas Higgins. The building will be erected on a 75 by 100 foot lot located at the corner of 2nd and Arizona streets, and will contain 75 rooms arranged in two and three room apartments besides a large lobby and amusement room. Interior finish will be of pine and baruwood veneer. There will be steam heat, an automatic elevator, hot water supply and vacuum cleaning system All apartments will have wall beds and private bath rooms. Bath rooms will be finished in tile and will have composition floors. Exterior of the building will be faced with pressed brick. Plans are being prepared.

LOS ANGELES, CAL, - Apartment Class C conhouse, 3 story and base. struction, \$35,000. Architect, Boshyshell, Wright and Callender Bldg. L. A. Owner, G. A. Wettlin, The building will be erected on West 21st sticet, covering an area of 60 by 107 fret. Plans are complete and in the hands of the owner who will do the work by Day Lebon

GOVERNMENT WORK AND SUPPLIES.

Oil Fuel for the Navy,

Of growing importance, to a degree which is a real emergency, is the plan of the Navy Department to acquire control of an adequate supply of fuel oil. Secretary Daniels as suggested that \$500,000, which he hopes to save by not constructing marine barracks, may be authorized for expenditure in the acquisition, or lease of oil lands. Of course, it is realized that this would not go very far, but it would be a step toward the fulfillment of his policy of having the Navy Department possess its own oil fields and produce and refine its own fuel oil. He is convinced that the department should own or control at least two oil areas, one on the Pacific Coast and one in the midcontinent field tributary to a Gulf or Atlantic port, each of these fields to be capable of yielding a supply exceeding the total needs of the Navy Department for a number of years to come. It is believed that if the Navy Department can secure in its oil-land holdings on a reasonable basis and can be authorized to arrange for the transportation and refining of its oils the sale of the higher priced light oils which it will not need for its own use will not only cover the cost of refining but will also cover or largely reduce the cost of drilling, transportation, and storage of the oils needed for needed for naval use. The price of oil is increasing and will doubtless continue to increase with the growth of the demand or oil in different countries and for different purposes. It will probably increase by leaps and bounds. Thus, two and one-half years ago the price of Oklahoma oil creased abruptly from 45 cents to \$1.05 per barrel. This certain increase in the price of oil will be due, not so much to a necessary increase in the east of production as to increase in the demand for oil, without a corresponding increase in the supply. By securing and reserving its own supply of oil the government can avoid having to pay the large increase in price which will come from this increase in

demand for oil for navai and commercial uses in other countries. It is apparent, then, that the government should it produce its own oil, should save the large profit of pipe-line transportation now accruing to the pipeline companies by huilding its own pipe line. This cannot be done instantly, however. To successfully operate a pape-line, contracts for handling a full line amount of oil must be secured before the pipe line is laid. The amount used by the navy will be onelifth of the full-line capacity; the other four-fifths of the space can be used in piping oil as a common carrier. The Navy must also secure its own production-secure leases, drill, and get and maintain its own supply-prior to building its own pipe line and to erecting a refinery. For this purpose it is advisable to get an appropriation of \$500,000 to secure a lease of a modest amount of land as a beginner-say, a quarter section of a highly probable land-the remainder of the \$500,000 to be used in drilling and in acquiring additional land, at the best judgment of the manager in the field. The acquiring of land can thus be done in a common sense way, and the expansion of the oil operations can be developed in a natural and logical manner.

Orland Irrigation Project,

Wribba Prigatos Project,
The Reclamation Service is asking for proposals for building the structures of the East Park Feed Canal in Colusa county, California, near Stony-ford, in connection with the Orland Irrigation project. The work involves about 6,000 cubic yards of exeavation, 4,000 cubic yards of exeavation, 4,000 cubic yards of concrete, the placing of about 49,300 pounds of reinforcing steel, and 11,150 pounds of metal work and gate fixtures, and the placing in structures of ahout 30,500 feet, B. M., of lumber. Bids will be opened at 2 o'clock p. m. April 21 at the office of the Reclamation Service, Orland, Cal.

Where Will San Francisco Put The Immigrants?

Dr. Parker to Speak Tonight at City Planning Exhibit.

Dr Carlton H Parker Secretary of the State Immigration and Housing Commission, will deliver the principal address this evening at the City Planning Exhibit at 1085 Market Street opposite Jones, at \$15. The subject of this address with he "Where Will San Francisco Put the Immigrants'

This is a problem which has more learing upon the growth of San Francises in the next ten years than any other single matter of its development. Dr. Parker has obtained through his official position many facts and statusthis regarding the number of immierants that may be expected to enter this port beginning early next spring with the opening of the Panama Canal, The problem is so imminent and so serious to the people of this city that it must be properly dealt with and the discussion this evening will deal with possible solutions of the distribution of this vast horde of foreigners ex-

Dr Parker is expected to make an improtant pronouncement in this reeard

Tomorrow night Governor Johnson is expected to speak. His subject will be "The Future of San Francisco Harbor.

Wednesday will be Panama-Pacific Exposition Day At \$15 P. M. Dr Frederick V. Fisher, chief of the Lecture Bureiu, will give an address, illustrated with slides upon "Planning and Building a Small Sized City-The Exposition."

Thursday at 3:30 the Commonwealth Club will hold a special City Planning meeting at the Exhibit. The evening address will be announced later.

Friday will be Woman's leay, with the program in charge of the Civic Center, and the California Club. Dr. Werner Hegemann, of Berlin, noted City Planning Expert, will deliver an address at 3.30 P. M Mr. James D Phelan will speak

Fiblian evening at 9:15 on "Sin Francisco and the Trouble it can Save by Planning Abend.

Saturday will be Merchant's The program is being arranged by the Chamber of Commerce and other commercial bodies, promising discussion of San Francisco's most important civic improvements,

Sunday will be Labor Day, with a program arranged by representatives from the several labor bodies. will be the last day of the Exhibit, which closes at 10 P. M. and will go to Los Angeles and other cities.

Many of the ninety old improvement associations of the city are arranging special meetings at the Exhibit where they can discuss in the body their own problems with the solutions of the 200 most progressive cities of the world pictured before them.

President J. M. Kepner of the Civic League of Improvement Clubs, who returned yesterday from two weeks in Los Angeles, is today calling a conference of the officers of the Association to see how the clubs can get the most out of this great lesson in civic achievement. So much that is vital to San Francisco is shown that Mr. Kepner cels that not a single improvement club member can afford to miss it and special notnes are being sent out describing the importance and urgency of this City Planning Exhibition.

SUN MINES GOLD.

The discovery of gold in Candle on Johnny Bull Hill, Alaska, was one of the most peculiar in the annals of gold mining in the North. Under a layer of ice twenty feet in thickness, was found a layer of gravel containing gold in workable quantities.

To got this gold the rays of the sun are utilized. An overburden of a foot or two of moss and muck is suliced off with water and the mass of ice exposed to the action of the sun. The sun, during the long arctic days of midsummer, does rapid work in reducing the sheet of ice to the level of the gravel body which underlies it. Then sulice boxes are arranged along the slope of the gravel hed, and the water dummed. When there is enough water, it is turned on the gravel to wash it into the boxes. The gold separated, the waste gravel is then washed down into the tailing piles minus its golden load Technical World Magazine.

- + -MUTUAL BUT HARD.

Northwestern of Scattle Gets Wallon on California Business.

The Northwestern Mutual Fire Asociation of Seattle, which invaded California a couple of years ago with ofters of insurance at cut rates, suffered a heavy loss on its California business during 1913. According to the consworn annual statement filed with the California insurance department the bases for the year amout to 63 per cent of its net premium receipts. This is 13 per cent higher than the regular manrance companies' average for the year and hears out the general prediction that the company's methods would sooner or later bring disaster. The practice of the company to cut rates to secure California business pointed out by insurance men as one sure to bring trouble, and if presisted in, will bring about its collapse,

Statements Conflict.

The Northwestern was caught on some beavy losses in California last year, individual fires costing the company many thousands of dollars. the Smith lumber plant fire, which proved a total loss, the Northwestern issued its policy for \$48,000 at a cut rate. The concern afterwards claimed that it had re-insured all but \$13,000 of this sum, but its annual statement fails to substantiate this claim. According to the annual statement, the entire reinsurance premiums reported in Califormia totaled \$2840.15, while insurance men state that the premium for re-insurance on the Smith lumber loss, as claimed, would more than total the sum mentioned, leaving no re-insurance for any other of the California risks.

BOTH THE OWNER and the Architect are particularly interested in all kinds of building materials, nower and booting systems. of building materials, power and heating systems, building specialties, every accesssory that goes into their project. Every issue of the Building and Industrial News contains hundreds of new building and construction reports giving the names and addresses of both the owner and the architects. Both the owner and architect receives a copy of the Building and Industrial News containing mention of their individual job conspicuously marked. Thus the builder and the architect have in their hands not only the news items of their particular project, but also the announcements and the advertisements of energetic business men who have goods to sell that are necessary to construct and equip the undertaking. IS YOUR ADVERTISEMENT AMONG THESE?

Catarrh Can Be Relieved

CALL Douglas 2944

The Hotel is only as good as its service

The new Ritz-Carlton Hotel, in Philadelphia, has four Electric Elevators and six Electric Dumbwaiters, furnished by the Otis Elevator Company.

> ARCHITECT Horace Trumbauer

Other Hotels of the Ritz-Carlton chain which are Otis equipped---

The Ritz-Carlton,

New York

The Ritz-Carlton, Montreal

The Plaza, Buenos Aires

Grand Hotel et de la Plage Guaruja, near Santos,

The Carlton, London

The Ritz, London

The Hyde Park, London

The Ritz, Paris

And its service can be only as good as its elevators----which is one good reason why hostelries with reputations to maintain, like the latest link in the Ritz-Carlton chain, at Philadelphia, have

Otis Elevators

Choosing from the various Otis machines, the Architects can provide hotels with elevators of the type called for by the character of the structure and insure perfect service---can equip all buildings of all classes in accordance with their needs.

Give a building unsatisfactory elevator service, and its other excellence can not overcome the handicap. Our offices in ninety-one cities in the United States are always at the Architect's call and can assist you in making your elevator specifications 100 per cent correct.

OTIS ELEVATOR COMPANY

Frank Neidick

Carpenter and Builder Phone Mission 5126

2669A Howard St., Bet. 22 nd and 23rd

San Francisco

As a carpenter and builder, Mr. Neidick has had twenty-two years of experience, during which time he has mastered the business in all its details and has established an excellent reputation for the high character of his work. This statement is proven by the fact that he has builtfifty-six flats for one man all of which were erected in the most satisfactory manner. Not only is the work of Mr. Neidick of the highest standard, but his business relations with the public are characterized by the strictest integrity. Mr. Neidick has brought to a successful issue many contracts throughout this city, which stand as a testifying demonstration for his knowledge and ability in his line of business. He is also a prominent stockholder of the General Contractors' Association.

"KINNEAR" The ONLY Door

You Buy for UTILITY that INCLUDES FIRE PROTECTION

INNEAR STEEL ROLLING DOORS are designed to afford fire protection and for the closure of all openings in which ease and speed of operation and economy of space are considerations. They are adaptable to all classes of new or old building construction and by their use make possible the closing of very large openings which could not otherwise be conveniently covered.

Recent great conflagrations have fully vindicated the claim of the "KINNEAR" STEEL ROLLING DOOR to pre-eminence as a fire-stop. Placed side by side with various other forms of fire retardants it has in every case remained in place even after the others were destroyed.

We will consider ourselves favored if allowed to explain and make quotations on any constructions meeting your definite needs.

We have just received from the press a new Handbook on Steel Rolling Doors and Shutters Illustrated only with California Installations. WOULD YOU LIKE A COPY?

Editorial Comment.

Business activity assumes periods of comparative quite. Sometimes it is hard to account for the reasons for it. Many are advanced but it depends upon the point of view as to how the matters are looked at. At present there seems to be comparative inactivity in business circles all over the world.

Inactivity here is accounted for by the action of the present administration in reducing the tariff and in the adjustment of banking interests relative to the adoption of the new currency measure. But this would hardly account for the depression of foreign markets and the mactivity that obtain there.

However, things here seem to have taken an upward trend. As the year advances business enterprises should begin to assume a normal growth. The trouble has been that a lot of industries have been existing on almormal privileges and have heen paying dividinds on watered capital. When it comes to a proper adjustment somehody must be squeezed and the eradication of the disease always causes the patient to feel worse.

The current number of the Technical World Magazine has an article on the secession of Irving J. Gill. Los Angeles architect, from the conventional forms of modern dwellings. It lays emphasis on the fact that he has practically eliminated wood in his construction and that he has cheapened construction in eliminating all the more or less conventional forms. For instance, his residences are constructed of concrete or hallow tile. Wood floors, wainscoting, base boards and even the picture molding is eliminated. that a building results that is extremely simple in its designs and furnishings and is most sanitary and economical in its unkeep.

Mrs. Milli- Drown has been found not guilty of the crime of murder by a jury in the Superior Court of Alameda county, California. Her defense was insouthy and the verdict finds her insune at the time the crime was committed.

There can be little doubt that the fact that she was a woman had a great deal more to do with the fallure to convict than the fact that she was linear, the pistification for the crime committed was a great deal more than that of the Alexander woman who was acquitted in a San Francisco court.

Helpless women should be protected by mankind and by the courts as well. But the failure of justice where women have committed positive crimes certunny does not deter the criminal element among women which everybody must admit exists if in a far less degree than among men.

As among criminals so in the divorce counts. As a rule women get the heat of it no matter what the condition may be and this is due to the newspapers and the mandlin sentiment that is restricted by the yellow journals, the problem plays and the moving picture multiplication. Just now there seems to be a rentile in setting in and a tendency to get back to normal conditions.

The federal government, having control of the Panama Canal Zone, is now attaiging a workmen's compensation plan for employees in the canal and national work.

This is another interesting experiment in connection with the government's ownership and operation of the "distinces" in the canal zone. The efficiency of the government as an emphase, and a dispenser of justice certury should be alided by having no interest to consider aside from its own and its employees.

It is a remarkable thing that all the stand-put politicians are howling to high heaven about the repeal of the Monroe Doctrine and that Hearst and all his allies are beating the tom-toms and invoking the curses of all the ancestral deities upon the heads of Wilson and Bryan. For these men have been practically strong for our tra-They have stood for the spirit of the Declaration of Independence throughout every vicissitude of their political life. And now that they conthat the policy of our government it is a potent fact that their action in asking for the repeal of the canal tolls is actuated by motives that are to them entirely sufficient.

Hearst quotes Senator Peurose as saving the repeal measure will be beaten in the Senate. The Chronicle save that the senate will obstruct the plassage of the measure. And so on throughout the line the people who are opposing the measure are those who have opposed every reform attempted by the administration.

In the Baltimore convention, as everylandy knows, Bryan upset Hearst's scheme to nominate Clark and broke the Rvan, Belmont, Underwood combination and nominated Wilson. Hearst is the same as he always was, a dog in the manger seeking to create any kind of disturbance possible. We may or may not believe in the repeal of the canal tolls provisions. Let the matter be threshed out in Congress. So long as we are convinced that the people in charge are acting in good faith it is evident that we have nothing to fear as to results.

The Democracy Of Business.

Remarks of Louis D. Brandels, Boston, Mass,

Reprinted from the Nation's Business. I had hoped to participate in a discussion of the pending trust legislation, but a hearing before the Interstate Commerce Commission in the Advance in Bates case prevented my hearing what had been said by most of the speakers, and it would obviously be improper for my to attempt to refer to them and to what they may have said, when I know so little what

it was. I want, however, to say this: The program of President Wilson is not a program of free and unrestricted competition, but it is a program of regulating competition instead of regulating monopoly. This, too, should be remembered as coming from President Wilson: He laid down in his message to Congress certain broad lines upon which in his opinion, the trust legislation should proceed, and it was then stated at the same time that the bills that were introduced were not the administration bills, but were bills of certain members of Congress or of committees which the public, business men and others had called upon them to present.

As far as I myself am concerned while I unqualifiedly commend each of the provisions contained in the President's message on this subject, I find very much. In the bill that amendment and correction, and I may say that I have found that those who have these bills under consideration, including the gentlemen who have prepared them, have the greatest desire to get such aid as they may get from those who speak with a view to perfeeting them, pointing out their errors and nomiting out the end which the administration has in mind can be accomplished.

The details of those bills are matters which are altogether too complex and cover allogether too much ground for me to take up here, but there are one or two others that hit one or two others that hit one or two other precise points that I want to call your attention to in this connection, and the first is this:

Transportation preferences as Affecting Equality.

No one can possibility approach the subject of trusts the subject of equality of opportunity to our business men. of which the trust problem is but a part, will out realizing this great problem. Transportation is one of the privileges which places the greatest restraint in favor of a few upon a large number of the American business men. It has been said sometimes that you cannot follow up an industrial monopoly today without finding that some unjust and preferential transportation privilege accounts in large measure for the power possessed. That, obviously was the case with the Standard Oil Company. It is obviously, also, the case in large measure with the Steel Corporation; and it has been true of a very large number of the other corporations.

Privilege, preference, decumination in favor of very large and powerful interests in the transportation field have been the main causes of the overwearing growth of a few converns as compared with the struggling growth of many others.

This trust problem-and by that mean the problem of giving to American business men an equal opportunity-cannot be solved unless there be a complete divorce of transportation from industry. We undertook a few years ago, in the Hepburn Act, to prevent the railroads from owning industries, from owning mines and manufactures, and in that way getting a preferential position which the ordinary shipper was not able to meet. The Act was narrowly construed by the Supreme Court, but even if the fullest and most generous construction had been given to it, it would not have been adequate, because it is not only important that the railroads should not control mining and other Industries, but that the industries should not control railroads, and, equally, that there should not be a holding company controlling both industries and milroads in the same interest. Therefore, legislation affecting this result is absolutely essential to the giving of equality of opportunity to American business men.

While legislation is necessary, the Interstate Commerce Commission has recently taken a very important step in that direction, Within a fortnight it has rendered its decision in the Interstate Control of the Interstate of the In

Refore that decision the lessis of the facts which led to that decision was that the great industries owning these industrial railroads were receiving as a part of the freight rates, important services free-services so great in the aggregate, that it was estimated that the illegal allowances granted to these industrial and the illegal services aggregated, in this Eastern Official Classification Territory alone, \$15,000,000; and when we consider that the whole amount which is supposed to be involved in this 5 per cent advance in freight rates is anly about \$50,000,0000 you will realize how important is that preference enjoyed by the great industries. There is now a proceeding before the Interstate Commerce Commission calling for a consideration of questions quite similar in principle to those involved in this case-services which are granted by railroads free, in addition to the line haul, to certain industries, mainly, the larger industries-not secretly, not in any sense illegas as to create in any way a moral taint, but actually rendered under circumstances that only the large interests can avail of.

Today we have been discussing at great length before the Interstate Commerce Commission what is called the "Trap" or ferry car service, granted free to those who have spur tracks to their industries. Under that the large shipper who not only has a spur track but who deals in such large quantities that he may send to the freight houses for trans-shipment at one time 10,000 pounds of freight in less than carload lots to be transshipped in less than carload lots gets what is equivalent to his truckage free, whereas all the smaller shippers must hear the truckage charge, heavy though that may be

That is but one of many industries which, the investigation of the Interstate Commerce Commission has disclosed, is receiving, owing to the circumstances under which it from the railroads a service very much greater than the smaller shipper receives-receiving free a service which the great mass of shippers cannot participate in at all. And just as in the Industrial Railroads case it appears that those special services and allowances have been depleting the revenues of the railroads to the extent of \$15,000,000, so those very services granted to individuast circumstanced as only the larger shippers can be are taking from the railroads a very huge revenue in the aggregate.

When we come to consider this broad question of equality of opportunity which, for short, is sometimes called, rather inaccurately "the trust problem" we must bear in mind this feature, that there is going on in the railroad world today a discrimination against the small man that has nothing to do directly with his efficiency. He may be ever so efficient, but if he is small if he is unable to ship in large enough quantities to avail, for instance of this truckage service, his competitor, who is hig, gets an advantage which, in the aggregate, is very big against him, and he moves on, not through superior efficiency, through a preference that is given him, and in the course of that preference you are taking from the railroads a very large "cyenue.

Those questions must be considered when you come to dear with the broad husiness problems to which the present administration is so expectly directing itself.

Advantages Islung in Great Industries. There is one other feature in regard to this matter that I venture to call to your attention. I understand that Secretary Redfield has spoken about the relative efficiency of the large and small plant. It seems to me that the limit of efficiency in business is reached a a fairly early sizes; that the disadvantages of size curveled in many respects the advantage of size of the size of the size of the great industry has an important advantage and that is not expense.

getting of knowledge, the collection of data in resard to trade, that knowledge for which great concerns extend their bases of inquiry all over the world; and they have great capacity in the different parts of this country to know the state of the markel, to know what is being done, to know what are the possibilities of trade, and also in their work through the laboratory. Laboratories are maintained, and they can be maintained only by great concerns.

That gives a perfectly legitimate advantage to the great industry—one for the pursuit of which our great captains of industry are to be commended.

We must also remember that we are working here in America upon the problem of democracy, and we cannot successfully grauple with the problem of democracy if we confine ourselves to political democracy. American development can come on the lines on which we seek it, and the fileds which we have can be attained, only if side by side with political democracy comes industrial democracy comes industrial democracy.

It is the relatively small man who pre-eminently needs the aid and the solicitous care of industry and of government. We have, gentlemen, to bear all the time that democratic view in mind, and to bear in mind that education does not end with the common school, nor does it end with the university. We are beginning throughout the country to talk now of vocational training. But where shall vocational training end? Not merely with the training of the individual for the bit of work that he is to enter That training must continue into. throughout life, and that training must extend to every part of his business life.

In what is perhaps the greatest department of our business-in the business of farming-we have come to recugnize that fact, possibly because the need of greater efficiency in farming is more marked than it is anywhere else; but the Government has undertaken, with the good will and to the gratification, I believe, of every citizen, to give to the humblest farmer an opportunity to acquire the knowledge which America affords. Through the agricultural experiment stations of state and nation, through the great work of our Department of Agriculture we are undertaking to advance in every possibly way the efficiency of the farmer.

The Government recognizes its duty to give to the farmer the opportunity of education. By giving him on the one hand, all the knowledge of the state of the market which can be obtained, and giving him, on the other hand, the best results of all the reseach that we know. What better could the Government of this country do than to extend to business that care and solicitude and aid which it shows in the case of the farmer? To make it affirmatively the business of the Government to extend to the manufacturer throughout this country the opportunity of knowing about his particular line of manufacture the best that can be known, because every man among us who is adopting any process in husiness which is not the best is guilty of a waste from which all of us are suffering. The best that there is, the most advanced knowledge in every department of business, is that to which every American citizen, every American business man, ought to be entitled, and more.

Why should not we recognize in the great realms of business those principles which have been the common property of the most advanced thought? Every man in the medical world glories in having given to the world something which advances medical science. Every man in the field of architecture glories when he can give to the world something that advances architectural science. You will find exactly the same thing in almost every department of engineering. Why should it not be so in business". Is there any lack of opportunity for competition, honorable competition, in the field of engineering or of architecture or of medicine? They can play the game wherever a man can

T med be no secrets when it comes to the question of adapting the art in a bli man devotes himself, to one is absolutely true of busiand will be recognized as true of cos as soon as men come to receguize that business is one of the handers and most promising of all profersions. And in the carrying out of the idea of advancing business. putting business into its proper place among human activities, the Government of the United States may play a great mort. I look forward to the Trade Commission which we are about to establish as an instrument which will be of inestimable advantage to is usiness and the future of Amerlea in unking the common property and the common knowledge of American business men the best that has Leen done and is being done in every department of business throughout the
